New York Chrysanthemum Show.

At the appointed hour, 2 p. m. on Monday, Nov. 2, the great Madison Square Garden was thrown open to the public. Most of the exhibits were in order and the judges were already busily occupied in looking over the entries and making their awards. On Sunday and all Sunday night more than a hundred men had worked away unloading vans and placing plants in position, and on Monday morning the number was increased until it was almost a small army. The balcony fronts were draped with thousands of yards of laurel festooning and away up on the sides and along the cornices were suspended draperies of graceful southern smilax. Nearly fifteen hundred Japanese lanterns, each enclosing an electric light, swung in mid air, which when illuminated filled the vast edifice with beautifully soft light and formed a most entrancing picture. No sooner were the gates opened than the people began to pour in and in the evening the crowd was tremendous. The illumination, the music, the moving crowds of people, the grand belts and masses of color and foliage all combined to make the scene a memorable one and indicated that beyond peradventure the great undertaking was now an assured success and that at last the patient workers, who had become so accustomed to disappointment that they had hardly dared to hope, were now to have their reward and that a new era for New York horticulture had at last dawned.

The general plan of arrangement was excellent. In the center of the Garden was an elaborately constructed and decorated pagoda, in which chrysanthemums and other flowers were for sale by a number of Japanese (?) young ladies. This was in charge of Siebrecht & Wadley, who had been the successful bidders for the privilege of selling flowers at the exhibition. Next came the tables arranged in two large circles, which were used for the displays of cut flowers. The remainder of the vast space was devoted to belts and masses of plants and when everything had been arranged there was none too much room left for the accommodation of the great throng of visitors. To attempt to give here a complete history of this, in many respects the grandest floral exhibition ever given on the American continent, is out of the question, as it would fill a book, the show being, on account of the duplication of prizes and new features arranged for each day, really half a dozen complete shows rather than a single one, and with half a dozen successive lists of awards.

CHRYSANTHEMUM PLANTS.

The premiums for chrysanthemum plants were very liberal, aggregating nearly $3,500 and should have brought out a better representation of high class specimen plants in this department than was offered. Pitcher & Manda's trained plants were good; outside of these there were but few large specimens worthy of notice and some indeed were so inferior as to be discreditable to the reckless exhibitors whose unaccountably bad judgment led them to attach their names to such stuff. But the smaller plants, those grown to a single stem and bloom especially, were very fine and the various groups, where gorgeous display was looked for rather than shapely trained individual specimens, were also most effective.

The best plant in the hall was Pitcher & Manda's single flowered "Daisy." Many of the trained standards in their exhibits were also very fine and on specimen plants and standards clear through the list they took nearly all the first prizes. Wherever shown their new variety, Mrs. E. D. Adams, took the lead as a superb variety and attracted more attention probably than any other one variety shown among the plants.

In the classes requiring plants grown to single stem and flower T. H. Spaulding was in the lead with a splendid collection, taking most of the first premiums.

In the groups of plants arranged for effect Theo. Roehrs was in the lead in most classes, although Siebrecht & Wadley and Pitcher & Manda showed some good groups also. Thos. Griffin, gardener to Mr. A. Ladenburg, took first premium in the leading class for group of plants covering not less than 250 feet. In class 14 calling for a group of chrysanthemums arranged for effect, palms and other foliage plants being admissable, Mr. W. B. Cutting's entry was a superb group most admirably arranged, but from the fact that the foliage plants were the most prominent components of the group, the chrysanthemums being in the minority, it was ruled out by the committee, but suitable recognition was subsequently made in the shape of a special premium.

MISCELLANEOUS PLANTS.

One of the grandest plants in the hall was a specimen of Chamærops humilis stricta about eight feet in height from Siebrecht & Wadley, which took first prize as best specimen palm. Both in the groups and among the isolated specimens were to be seen many noble examples o

rare and valuable foliage plants, contributed by Siebrecht & Wadley, Pitcher & Manda and W. B. Cutting. Mr. Cutting took first prize for specimen cycas. The premiums for groups and collections in this section were generous. They were won by Bonn & Dressel, Pitcher & Manda, Siebrecht & Wadley, W. B. Cutting and Julius Roehrs, principally. The arrangement of Pitcher & Manda's group of ornamental foliage and flowering plants was specially worthy of note, in fact all the entries in his class were very creditable.

In the orchid classes Pitcher & Manda were first on twelve distinct plants, six ditto and on twelve cypripediums. Siebrecht & Wadley were first on three distinct plants and also won the silver cup offered by Pitcher & Manda for the best collection of cypripediums in bloom.

One of the most attractive features was a grand group of Mme. Crozy and Star of '91 cannas in flower from Jas. Dean, which was awarded the Morgan cup. Seen from any direction this was the most brilliant spot in the whole exhibition. The group was edged with a border of Jerusalem Cherry, which made an admirable finish. H. A. Dreer contributed a fine collection of specimen ferns.

CUT FLOWERS.

The display of cut flowers was expected to be grand, but it surpassed the most sanguine expectations. The specimen blooms were displayed, except when vases were stipulated, on green painted flats, as has generally been the custom.

Mr. E. A. Wood came down from Boston with an exhibit in the leading class, fifty varieties, one flower of each and staged in the Boston style, that is, in vases with stem and foliage showing. He captured first prize, second going to Dailledouze Bros. and third to Ernst Asmus. "That's the way to show them, anyhow," remarked Mr. Dailledouze, and he is correct. Foliage and stem are as necessary to a chrysanthemum as to a rose and the flat board business ought to go. Messrs. Dailledouze Bros. were first on 24 and on 12 distinct varieties; among their best blooms were Vivian Morrell, Excellent, Ivory, The Bride and Domination.

Ernst Asmus was first on 24 Japanese, one vase of pink and one vase of crimson. The competition between Messrs. Asmus, and Dailledouze on the vase of pink flowers was very close, the former staging Mermaid and the latter Mrs. J. N. Girard and the Mermaid won. Mr. Asmus' winning flower in the crimson class was Edw. Molineaux. Among the finest of Mr. Asmus' blooms in the various classes were Mrs. Irving Clark, Miss M. Wanamaker, Elmer D. Smith, Jessica, Mary Wheeler, Roballion and H. E. Widener.

Pitcher & Manda won quite a number of first premiums, including those for 12 Japanese, six Japanese and the single flowering classes. Among their most notable blooms were Mrs. E. D. Adams, Mrs. Grace Hill, Ada McVickar, Hicks Arnold, Mrs. W. S. Kimball, Harry May, Mary Wheeler, Lincoln and Louis Boehmer. As this list indicates Pitcher & Manda made a bold and successful strike with their own varieties, not depending upon established favorites for recognition. Most of the varieties above enumerated have been described elsewhere. Many of them are superb. Hicks Arnold under the electric light glows as no other chrysanthemum does.

Among the successful prize winners in various classes was Wm. Tricker, who staged fine specimens of John Salter, Eve, Mrs. Weston and other good ones; Julius Roehrs, whose Frank Thomson, Robt. Bottomly and Shasta were superb; and J. Condon.

The display in vases of cut blooms with stems not less than 18 inches was the most gorgeous feature of the show. That their superiority over the flat displayed blooms was understood by the public was very evident from the crowds that surrounded the tables on which they were displayed. The tables were unfortunately too high to show the flowers in this manner to best advantage. The vases provided for their reception were of the most beautiful and costly ware, and much was added to the impressiveness of the exhibit by this feature. Some idea of the magnitude of the show will be gained by considering that nearly 3,000 of these valuable vases were used for the reception of chrysanthemums, roses and carnations, in addition to the quantities of glassware used. Julius Roehrs, Peter Henderson & Co., Ernst Asmus, George B. Gill, J. N. May, Charles Bird, and Jas. Bryden were all prominent exhibitors in this section. In the class calling for one vase of 12 flowers, white, there were eight close competitors. Peter Henderson won with Mrs. Alpheus Hardy, undoubtedly the finest 12 blooms of this variety ever shown in America. Robert Bottomly, from the same exhibitor, was also grand.

J. N. May showed among other fine specimens, Miss Wanamaker in splendid form, and H. E. Widener, the latter taking first prize for vase of yellow. Julius Roehrs received first for 12 vases of six flowers each. His Ada Spaulding in this entry was superb. On the fourth day of the show Mr. J. H. Taylor appeared with a grand lot of long stemmed blooms which were equal to the best. His plants being later in blooming, he was not ready to compete at an earlier date. As most of the premiums in the cut flower classes were duplicated on the fourth day, late comers fared as well as the earlier exhibitors. The group from Jas. Bryden was one of the most admired exhibits in the hall. A certificate was awarded to Geo. B. Gill for a sport from St. Patrick named Mrs. Dudley C. Hall.

SEEDLINGS.

Here was the cream of the whole exhibition. Here was exemplified the highest achievement of American floriculture. It was asserted by those in a position to know that such a display of chrysanthemum seedlings the world has never before seen. There were full 600 of them, many being decided advances on any variety heretofore disseminated. The following is a list of the most promising varieties, with the awards received by them: Exhibited by E. G. Hill & Co., Richmond, Ind.: Edw. Hatch, pink, the Whitney cup and a certificate of merit; O. P. Bassett, a fine commercial variety, form of Cullingfordii, certificate; C. B. Whitnall, crimson maroon, certificate; Maud Dean, La France color, certificate; Mrs. Robert Craig, pure white, globular; Mrs. Anthony J. Drexel, deep crimson; Mrs. Louis C. Madeira, splendid golden sphere; Mrs. Maria Simpson, yellow, an improved Coronet; Judge Hoitt, a fine incurved, silvery pink.

Exhibited by Hugh Graham, Philadelphia, Pa.: Roselyn, shade of syringa, certificate; Mrs. Wm. F. Dreer, great improvement on Source d'Or, certificate; Roy, incurved pink, certificate; Marguerite Graham, cream white, form of H. Cannell, certificate; Mrs. Dr. Williams, red and gold; J. G. Eisele, orange; Mrs. Robert C. Ogden, deep pink reflexed.

Exhibited by T. H. Spaulding, Orange, N. J.: Col. W. B. Smith, light orange, the Bird cup; H. F. Spaulding, old gold, the Ladenburg cup and a certificate; E. Hitzeroth, yellow, the Winslow cup and a certificate; American Flag, an improved Marvel; Chicago, striped carmine and white; Christopher Columbus, Japanese incurved; Mrs. J. M. Schley, shell pink; Mrs. J. W. Manning, form of Girard, but darker color; Miss Lilian Russell, silvery pink; Ada H. Leroy, deep pink; Mrs. H. F. Spaulding, large white; Dr. Wm. Pierson, Columbian and J. Henry French, varying shades of red. Mr. Spaulding also took the Astor cup for the best collection of seedlings.

Exhibited by Pitcher & Manda, Short Hills, N. J.: Harry May, orange, the Lanier cup and a certificate; Mrs. W. S. Kimball, white suffused with pink, certificate; Hicks Arnold, orange, certificate; Mrs. E. D. Adams, white, certificate; Ada McVickar, fluffy white; Miss M. Colgate, white; the improved Mrs. Alpheus Hardy and a large number of other seedlings.

Exhibited by Thomas Griffin, gardener to Mr. A. Ladenburg: Emily Ladenburg, deep Jacqueminot color, the Oelrichs cup and a certificate; Oasis, yellow, certificate.

Exhibited by James Bryden, gardener to Miss Simpkins, Yarmouthport, Mass.: Miss Mabel Simpkins, large globular white, the Clews cup; Bryden, Jr., fine yellow, certificate; Snowflake, pure white.

Exhibited by J. Wheeler, Brookline, Mass.: Jos. H. White, pure white, form of Elsie, certificate.

By George B. Winslade: Charles J. Osborne, bronzy yellow, certificate, besides a good assortment of other seedlings.

By Kersham Clegg: Clegg 22, brighter than Geo. W. Childs, certificate.

By Aug. Bennett: Miss Grace Brown, pleasing yellow, certificate.

By C. D. Kingman, Middleboro, Mass.: Namasket, fine white.

By H. A. Gane, West Newton, Mass.: A fine unnamed white.

By J. Forsterman, Newtown, L. I.: A collection of this year's seedlings, numbering about 80, some of which will be heard from in the future.

Regarding the exhibition of seedlings, it appeared to be the unanimous opinion of everyone that new varieties should not be exhibited in competition until their second year, excepting in a special class by themselves.

ROSES.

The leading rose growers for the New York market were out in force, and the display of roses was as might be expected—superb. J. H. Taylor was on hand with large collections of Mermet, Bride, Cusin, Hoste, and Gontier. The Mills cup for 100 Brides was won by Mr. Taylor. L. M. Noe, F. R. Pierson and S. C. Nash staged magnificent American Beauties and other varieties. Ernst Asmus showed vases of superb Meteors, and from John N. May and the John Henderson Co. came fine La France, Mme. Pierre Guillot, Waban, Bon Silene, etc.

The rose premiums were competed for on Tuesday, and the premiums were duplicated throughout on Thursday. For best collection of roses Ernst Asmus was first. The Taylor Cup, donated by J. H. Taylor, for vase of Mme. Cusin roses, 100 blooms, was also awarded to Ernst Asmus. For the best new rose of American origin, Mr. John Burton received the Eyerman Prize, a silver cup. The rose thus honored is a sport from American Beauty, lighter in color than that variety.

CARNATIONS.

The display of carnations was large and comprised many new and promising varieties. The Lanier Cup was awarded to E. G. Hill & Co. for the best 100 new pink carnations, variety Edna Craig. A special certificate of merit was awarded to J. H. Taylor for May Queen. Edw. Swayne and L. Wight both showed promising seedlings. Ida McKinley, a pink variety from Messmore & Turner, of Minerva, O., was much admired. E. B. Jennings received a certificate for seedling carnation Orange Blossom. Prizes were also won by Chas. T. Starr, H. E. Chitty, J. H. Taylor, Geo. Smith and John Tharpe.

On Saturday Ernst Asmus won the Limburger Cup for the best collection of cut chrysanthemums staged for effect, and the Benedict cup for best collection of roses staged for effect. There was no competition in either class. Hill & Co. were awarded a certificate of merit for seedling chrysanthemum Mrs. Robert Craig, a very beautiful white. Dailledouze Bros. were first for 100 mignonette and C. F. Dihm for 100 violets.

On Friday the following special premiums were awarded: The Sloan cup, to H. E. Chitty for the best collection of carnations; The Ladenburg cup, to Edward Swayne for the best pink carnation of recent introduction, variety Aurora; the J. Crosby Brown cup, to E. G. Hill & Co. for the best seedling carnation never before exhibited; to John McGowan, for collection of carnations, a certificate of merit; to Fred Dorner, for collection of seedlings a certificate of merit; also repetitions of Tuesday's regular prizes to Charles T. Starr, H. E. Chitty, George Smith, J. H. Taylor and others.

MISCELLANEOUS CLASSES.

For the dinner decoration premiums there were three entries, Brower & Son, Siebrecht & Wadley, and Charles A. Dard, to whom were awarded first, second and third respectively.

The table by Messrs. Brower & Son, which received first award, was very beautiful. The center piece was a mound of long stemmed Ada Spaulding chrysanthemums, the corsages and boutonnieres being of the same. Every bloom was a perfect specimen. The ribbons on the corsages, the little shades on the lights and the decorations on the ware were all in a corresponding shade of pink. The glassware on the table is said to have cost $1,200.

Messrs. Siebrecht & Wadley, to whom were awarded second prize, showed a table decorated in gold. The center piece was of H. E. Widener and Gloriosum chrysanthemums, with favors, candles, and shades of the same color. The effect was very luminous and beautiful.

Mr. Charles A. Dard's table was oval shaped, with a sunken center in which was arranged chrysanthemums in varied colors with rich foliage plants.

For vase of chrysanthemums and foliage on Wednesday, George Stumpp was first, Siebrecht & Wadley second, and C. F. Dihm third. On lily of the valley the only competitors were Ernst Asmus and Julius Roehrs and Asmus came out on top.

The Cutting prize for basket of orchids was awarded to Siebrecht & Wadley, who also won first prize for mantel decoration.

The gold medal offered by Mr. Jas. Dean for the best working model of a greenhouse for amateur use was awarded to Thomas W. Weathered & Sons. This being the first gold medal ever awarded for this purpose in America, Charlie Weathered was in his happiest vein, and received the congratulations of friends with becoming dignity.

Special certificates of merit were awarded to the Perfect Drainage Bench Tile, and to the Wight Flower Shipping Case, both exhibits by W. P. Wight; to Weeber & Don for exhibit of horticultural requisites, and to H. A. Bunyard for the Improved Cut Flower Exhibitor.

The potting contest on Wednesday afternoon proved to be quite an attraction. There were four contestants. The judges were John Smith, George E. Bennett, and J. D. Eisele. Alex. McPherson was time-keeper. The committee reported as follows:

"In the time allotted (1 hour), George Martin potted 1,277; Wm. Liston, 1,010; Wm. Enright, 1,153, and Dennis Burns 1,238. We find Martin's potting far superior to either of the other contestants. We consider Enright's potting superior to Burns', although a little less in number, and so far would place the prizes as follows: First, Geo. Martin; second, Wm. Enright; third, Dennis Burns."

In the violet contest Minnie Kuhn made a nice bunch in 2 minutes and 53 seconds, and was awarded first.

The attendance throughout the continuance of the exhibition was very large, and there is no doubt that when the final figures are made up the New York Florists' Club will find its treasury enriched by a substantial sum. Mr. Plumb proved to be the right man in the right place and as manager of the exhibition he has made for himself a record which cannot fail to be of great value to him in the future. Mr. James Dean and Mr. J. N. May both worked incessantly with that devotion which is characteristic of these gentlemen when they undertake anything. Mr. May superintended the judging and reports, and managed to accomplish the herculean task with satisfaction to all concerned. Complaints regarding the awards were unusually few, and the judges selected appear to have satisfied everybody.

The Madison Square Garden Co. fulfilled their promises to the Florists' Club to the letter and in all their dealings acted in a most generous fashion. Mr. A. Ladenburg especially, soon won his way into the affections of the boys, and the experience of the club and garden management as partners has been so satisfactory to both that they will without doubt work together again often in the future.

That every detail in such a big undertaking should have been perfect could not have been expected. One most annoying feature to visitors especially should and doubtless will be avoided on future occasions. The employes of the Garden are obliged to obey rules to the letter. In consequence of this many exhibitors from a distance as well as gentlemen who had been asked to come a long way to officiate at the exhibition were in many cases compelled to stand a long time outside the door, unable to obtain admittance until some special individual could be found whose duty or privilege it was to attend to them. Again a distinction should be made between the ordinary public and the florists who come from out of town to attend such occasions. From the latter an admission fee should never be extorted, much less a repeated admission fee every time they leave and return to the hall.

Charlie Weathered suggests as a remedy for such unpleasant occurrences, that all horticultural societies, clubs and other organizations in the country unite in adopting a universal badge, non-transferable, which shall be issued to all members of such organizations and admitting to all exhibitions wherever located. Something of the kind ought to be done.

The number of notable visitors at the exhibition was very large, too numerous to name them all. Prominent men in the trade were present from all the large cities, from Chicago on the west to Boston on the east. The one man of all who should have been there, who would have been there if he could, whom everybody was asking for and whose absence was deeply regretted was John Thorpe, who on account of sickness was unable to attend. But his friends were there, and their name was legion, and they all wish him a speedy recovery.

London, Ont.

The chrysanthemum show of the London Florists' and Gardeners' Society was held in the city hall November 3–7.

Some very fine exhibits were made, particularly the cut blooms of Messrs. W. S. and C. M. Greenway, some of which measured as follows: Kioto, $8\frac{1}{2}$ in.; Rob't Crawford, $10\frac{3}{4}$ in.; L. Boehmer, 7 in.; Mrs. F. Thompson, 7 in.; Gloriosum, 8 in.; Mrs. I. Clark, 8 in.; Henderson's Queen, $5\frac{3}{4}$ in.; H. E. Widener, 6 in.; Mrs. Langtry, $7\frac{1}{2}$ in.; Domination $5\frac{1}{2}$ in.; G. F. Moseman, 6 in.; Mme. C. Audiguier, 9 in.

In the front of the hall were the amateur exhibits; in the north end, the table decorations and an exhibit of bulbs, etc. by J. S. Pearce & Co. The cut flowers occupied the council chamber.

Taken on the whole the exhibition was fully 100 per cent in advance of that of last year.

The attendance, however, was very limited on the first two days, and the committee then decided to continue the exhibition until Saturday evening, at a reduced rate of admission, with the hope of bringing up the receipts.

E. G. Brown, of Hamilton, Ont, exhibited some immense flowers. The exhibit of J. C. Vaughan of new varieties drew the attention of all.

After the prizes had been awarded the plants were arranged for effect. An immense bank was made in the center of the hall, covering over 1000 square feet and was composed entirely of mums. On the east side of the hall were arranged the greenhouse plants. The following is a list of prize winners:

For 25 chrysanthemums, 1st, F. Dicks; 2d, J. Gammage & Sons; 3d, G. W. Rennie; 12 chrysanthemums, 1st, F. Dicks; 2d, J. Gammage & Sons; 3d, G. W. Rennie; for 6 varieties, 1st, F. Dicks; 2d, G. W. Rennie; 3d, J. Gammage & Sons; for specimens, 1st, G. W. Rennie; 2d, F. Dicks.

Those receiving premiums for 12 varieties of carnations were: 1st, J. Gammage & Sons; 2d, Thos. Wells; for calla lilies, 1st, Thos. Wells; 2d, G. W. Rennie; for 12 primulas, 1st, Thos. Wells; 2d, F. Dicks; for greenhouse plants, 12 varieties, 1st, Thos. Wells; 2d, W. S. & C. M. Greenway; for ferns, 1st, Thos. Wells; 2d, W. S. & C. M. Greenway.

Amateurs' class: 6 mums, 1 specimen, 1st, Mrs. Insell; 2d, J. Cook.

Cut flowers: 25 mums, 1st, W. S. & C. M. Greenway; 2d, E. G. Brown; 3d, Holznagle & Noel; 12 mums, 1st, E. G. Brown; 2d, W. S. & C. M. Greenway; 3d, Holznagel & Noel.

Vase mums: 1st, W. S. & C. M. Greenway; 2d, J. Dilloway.

Carnations; 50 blooms, 1st, J. Gammage & Sons; 2d, J. Dilloway; 3d, F. Dicks.

Twenty-five roses: 1st, J. Dilloway; 2d,

W. S. & C. M. Greenway; 3d, F. Dicks.

Floral table decorations: 1st, J. Dilloway; 2d, J. Gammage & Sons.

Basket mums: 1st, G. W. Rennie; 2d, J. Gammage & Sons.

Funeral designs: 1st, J. Gammage & Sons; 2d, S. S. Wortman.

Bridal bouquet: 1st, S. S. Wortman; 2d, J. Gammage & Sons.

Wreath, all mums: 1st, J. Dilloway; 2d, G. W. Rennie; 3d, S. S. Wortman.

Messrs. Holznagle & Noel, of Detroit, made an exhibit of roses and carnations, and 25, 1, and 12 mums.

Caldwell, the woodsman, was also on hand with his evergreens.

James Webster, of Hamilton, and Geo. Boucher, of St. Thomas, acted as judges, to the satisfaction of all.

Wooster, O.

The chrysanthemum show and floral exhibition, given by the Wooster Floral Club, Nov. 4 to 6, has been a success so far as display is concerned.

The club was organized less than a year ago and is composed of the commercial florists and amateurs of this city. The florists have given encouragement to the organization, believing it would stimulate a love for plants and flowers, and thus be indirectly beneficial to them. The show which has just closed has demonstrated the fact that they were not mistaken. Ten plants of the "Queen of Autumn" will be grown next year to where one was grown this year.

The displays made by amateurs were all good, and worthy of a more extended notice than we can give at this time.

We wish to speak now, more particularly, of cut blooms of new carnations and chrysanthemums which were sent in for exhibition only. The first we noticed was a splendid collection of twenty-five chrysanthemum blooms kindly exhibited by Mr. John Thorpe, which comprized the cream of last year, seedlings and many of the older varieties. This display received very favorable comment from the throng of visitors, and received the following favorable report from the committee on exhibits: The blooms of G. W. Childs, J. P. Freeland, Coronet, Rohallion, Ada Spaulding, Ernst Asmus, Mrs. Weston, Kioto, Mrs. E. W. Wood, Target, and Jessica, are splendid specimens, and we recommend them as desirable varieties for all purposes.

The exhibit of J. C. Vaughan was a splendid collection of chrysanthemum blooms of new Japanese varieties and older sorts, and well deserved the flattering report of the committee which is as follows: The collection exhibited by J. C. Vaughan of Chicago reflects great credit upon the grower and shows good judgment in his selection of desirable varieties. Those varieties we consider worthy of special mention are No. 1, 4, 10 and 12, J. T. Price, Waban, Mrs. Senator Hearst, Mermaid, E. Audiguier, L. B. Bird, Clara James, J. C. Vaughan and J. T. Emlen.

Mr. Edward Swayne, of Kennett Square, Pa., exhibited a few specimen blooms of his new carnation Aurora, which gives great promise of becoming a leading variety among the red; also Thos. Cartledge, a new variety which is a close rival of Grace Wilder. We consider it superior to Wilder in many respects.

The display of chrysanthemum plants made by L. R. Kramer, F. H. DeWitt and W. A. Porter were all good and deserve special mention, also the display of foliage and decorative plants shown by G. F. Kingsley and W. A. Porter.

Mr. DeWitt exhibited four seedlings of '91 which are very fine and will no doubt occupy a prominent position in the family of "mums," especially his new named seedling Highland Mary. It is a perfect flower of the Chinese type and is a beautiful shade of pink.

The twelve seedlings shown by W. A. Porter were up to the standard in color and size. Plants well grown and vigorous. Part of them are very distinct and will no doubt be quite an acquisition.

P.

American Carnation Society.

The second meeting of this young organization took place at the St. James Hotel, New York city, on November 4. The meeting was called to order at 2 p. m., President Edwin Lonsdale occupying the chair and Mr. C. J. Pennock, secretary. There were about thirty members present, including many of the most widely known carnation fanciers and growers in the country.

Considerable time was spent in getting the new constitution and by-laws into shape. The annual meetings will take place on the third Tuesday in February and the officers' terms will begin on April 1. An exhibition of carnation plants and flowers will be held at the time and place of each annual meeting. The annual fee was fixed at two dollars. The objects and aims of the society as stated in the constitution are as follows:

Section 1. To increase the general interest in the cultivation and use of the carnation.

Sec. 2. To improve the standard of excellence in the flower.

Sec. 3. To improve the methods of cultivation and methods of placing it upon the market.

Sec. 4. To increase its use as a decorative flower.

Sec. 5. To improve the methods of growing plants and rooted cuttings and marketing the same.

Sec. 6. To infuse into the grower a more thorough understanding of the general rules of successful business management.

Sec. 7. To properly supervise nomenclature.

Sec. 8. To stimulate the growing and introduction of improved seedlings and crosses, by a system of exhibitions and awarding valuable prizes.

The constitution and by-laws were finally completed and adopted and a vote of thanks was tendered to the committee, Messrs. C. W. Ward, Jas. Dean and John Young.

After the reading by the secretary of letters from Benj. Grey, Wm. Scott, Benj. Durfee, R. J. Mendenhall and Jas. G. Hancock, President Lonsdale made a short address, in which after alluding to the objects of the organization he gave a brief history of the carnation up to the present time. He said that the first of the section of ever-blooming carnations is understood to have originated with the late Jean Sisley about fifty years ago. He alluded to Smith and Allegatiere as also deserving of credit for their attainments in carnation culture, and quoted some statistics in connection with the origin of such varieties as Pres. DeGraw, Peter Henderson and Hinze's White. Although the foundation of our ever-blooming carnation was laid in France, yet as a general rule European varieties lose their vitality quickly in this country and rarely last long. Referring to Fred Dorner's theory, in which he claims that the average life of the carnation is only 5 or 6 years, Mr. Lonsdale said that in his opinion the length of life of a variety was largely a question of treatment, soil, climate, etc. He quoted John Thorpe's description of the future ideal carnation, viz: flower not less than 4 inches across, petals of good substance and regularly disposed, good perfume, length of calyx not less than half the diameter of flower, strong enough not to burst, stem not less than eighteen inches long, leaves eight inches long and one half inch wide, such flowers as would sell for one dollar apiece and would make the carnation within six years the leading flower in the market.

Mr. Fred Dorner and Mr. L. Wight were both referred to as having done much to advance the standard of the carnation in the market. In the opinion of the speaker it is desirable to develop the length and breadth of the petals rather than their number. He advised discarding all varieties whose petals inclined to incurve, also to avoid encouraging the reflexed sorts. The outside petals should be horizontal, the inner ones upright. The cultivation of the carnation as a pot plant is sadly neglected and should receive more attention. Cuttings put in now would make good plants by next spring.

He advocated the selection of varieties for summer blooming. It might take a few years of careful work to secure first rate varieties for this purpose, as those that are best for winter may not be the best for summer planting. In conclusion Mr. Lonsdale asserted that it was not the wish of the carnation society to antagonize or interfere in any way with the work or prosperity of other existing societies, their intention being rather to go hand in hand with such bodies, their aims and purposes being all in the same direction, and asserted that in proportion to the improvements in the carnation will be the public appreciation of it, and with better grown plants and superior varieties we may reasonably expect the carnation to soon rank with the orchid and the rose.

Mr. Edw. Swayne said that he knew of but one satisfactory summer bloomer, that being Portia.

Mr. W. J. Palmer claimed that Silver Spray would give twice as many flowers as Portia, and that Grace Wilder succeeded outdoors with him as well as any other variety.

Mr. R. T. Lombard said that he had tried summer blooming for a number of years and had made a success of but two varieties, Mrs. Fisher and Hector. He propagates in October or November, puts in flats till March 1 and plants out in April. He had gathered as high as 10,000 blooms per week from 3,000 plants.

Mr. J. L. Dillon thought the best plan was to take good care of the carnations indoors in summer. No fading, stain or dirt need then be feared.

Mr. Jas. Dean coincided with the last speaker and said that if given plenty of water inside they would come all right.

Mr. Lombard said that he could get stronger stems outside than in the houses.

Mr. Albert M. Herr, of Lancaster, Pa., then presented a paper on "Soils," which was read by the secretary.

SOILS.

This next to disease is the most complex subject the carnation grower has to deal with and it has almost as many sides to it as there are growers. I propose in a short paper to give my side and experience and hope it will bring forth in

discussion some points that will help to lighten us on our road to success.

First my soil is a sandy loam with sand subsoil; it naturally has very free drainage and does not become hardened like clayey soils when dry. To this soil for field culture I add about as much manure as is generally used for vegetables and plant my carnations on ridges to still further assist the drainage. They are planted far enough apart to work with the horse and harrow, and after every rain, no matter if it is twice in one week, they are well harrowed. Whenever weeds begin to show they are well hoed in the row. This may seem a trivial matter to write about, but it is a point that is often overlooked that to have real healthy and vigorous field grown plants they must have an abundance of room and the soil kept well stirred, not merely scratched with a hoe or hand harrow, but cultivated to allow the sun and air to act on the roots of the plant. With a first class field plant half the battle is fought.

In the house I plant almost exclusively on solid beds and am now using the same soil the third season without either change or addition, excepting some well rotted stable manure each summer. The plants not only do not show any signs of deterioration, but are looking, if anything, better than ever before. We keep the soil constantly stirred and carefully watch that it does not get overwatered (while the plants are growing); soil that is kept constantly wet is unfit for plants the whole of one season, let alone two.

After the plants are pulled out in the spring the beds are allowed to become thoroughly dry. Sometime in July they are given a coat of well rotted manure and dug round thoroughly, turning the soil and mixing the manure well in; along in August they are well turned again. This gives the sun a chance to work on the soil and has a similar effect and it is an open question with me whether it is not a better effect than the mechanical and sweetening action of frost.

My bench soil is treated in the same manner excepting that it is renewed every second season, not because I found it a necessity, but because I have been too timid to venture for a longer period. I have an experimental bench started now on which was planted last season L. L. Lamborn, this year it is planted to Golden Gate, next year it will be planted to either Daybreak or Tidal Wave and the next to either Christmas or Wilder, and so on with change of varieties and color each season, but no change of soil, until I find that it shows some signs of being played out. If this is successful it will mean the saving of a very unpleasant labor and save quite an item in the expense account.

There are some soils that would not give the same results as mine. With a stiff clayey soil I would hesitate to experiment on a large scale and would watch the watering very carefully, keeping the soil constantly stirred. In soil of this character manures should be used that would help to lighten it, such as well rotted vegetable matter, wood ashes, lime or pure horse manure. A good manure, where it can be procured, for clay soils is the sweepings of blacksmith shops, using it with care, as it contains a quantity of ammonia.

In very sandy soil use either pure cow or hog manure to help stiffen it up a bit. It has been my experience that the best soil for carnations is a moderately stiff loam with good drainage. If it can not be had naturally the next best is to try and get it artificially.

Where commercial fertilizers are used the soil should be renewed every season without question. Such soil should be thrown out and planted to some rank growing plant like corn or clover before being fit for inside use again. It is not advisable to use this class of fertilizer in the field, but in some soils it may pay to experiment with them in the house and possibly we may find one that will give better flowers and more of them than can be had from ordinary manure. One thing not to be overlooked while on this subject is that no plant grown in a commercial fertilizer should be used for propagating, as they are sure to deteriorate; they seem to act on carnations like drugs do on a human being, to help them over a short time, but the after effects are always bad.

The whole subject resolves itself to this: Every grower should study his soil until he finds the best and least expensive way to handle it as well as what manure will give the best results in it. I hope that my experience may be of some assistance and would like to hear from others who have a different soil. A. M. HERR.

Mr. Dillon in the discussion which followed advocated raising the soil in ridges on which to plant carnations. The dirt is not then thrown up on to the plants in cultivating. Either too deep planting or soil thrown up against the plant is often the cause of many sickly carnations.

Mr. Lombard disputed Mr. Herr's theory regarding the use of commercial fertilizers. He uses no other manure out doors and can't believe that the manure has any effect on the health of future plants. If a plant thrives on commercial fertilizer it is a success. When a cutting is taken from a plant and rooted it becomes a new plant with an entirely new life of its own. He uses as much as two tons of fertilizer to the acre.

Mr. Palmer said it was his practice to take the soil from the rose benches for his carnations and he doesn't see any better carnations anywhere than he has. His soil is heavy brick clay soil at that and all the fertilizer he gives it is a little rotten manure in spring.

Mr. Ward spoke of the merits of spent hops from the brewery together with a dressing of pure ground bone.

Mr. Lombard said that he made it a practice to plow up a piece of sod land every spring, turning the sods completely over, which he used to plant his carnations on. Would never think of planting them upon any but new soil. He believed in plenty manure and that the trouble with many plants is that they are starved.

Edward Swayne next read a paper on the production of seedling carnations.

THE PRODUCTION OF NEW SEEDLINGS.

Some one has said "If a man would succeed in life the first thing he must do is to choose good parents." The advice comes rather late for us in some respects, but serves to show the importance of heredity. "Like begets like and beauty breedeth beauty."

Were we to accept this as infallible we would be doomed to many disappointments, but that it is a general law and must form the basis of our operations in the production of new seedlings none can deny. With this in view the next thing to do is to decide what we want, that is what is most desirable in a carnation and right here I want to protest against the idea of making the size the first thing. A flower should be judged by a scale of points. I will put down such as seem to me important:

First, color; second, form; third, fragrance; fourth, substance; fifth, texture; sixth, stiffness of stem; seventh, length of stem; eighth, freedom of bloom; ninth, appearance under electric light; tenth, size.

Each of these qualities should be judged by a scale of ten, making one hundred points in all. There would then be little trouble in getting the approximate value of a flower. Although this is put in rather a dogmatic way, it is meant to be only suggestive, as regards what seems to me the best method of judging flowers. I earnestly hope that something of this nature may be adopted for our exhibitions.

Now that we have some idea of what is wanted the next thing is to select such varieties as have the greatest number of desirable qualities or certain ones in the highest degree and by a happy union hope to conserve the good and eliminate the bad, and here we are likely to be surprised, delighted and dejected by turns, for the present state of science does not give any certain laws by which we can predict certain results. It only suggests tendencies, but if every florist who attempts the production of new seedlings would keep a careful record "even to the third and fourth generation" someone will no doubt be ready to take that mass of evidence and deduce from it laws that would aid us materially in our labors.

I have many theories and I suspect our friend the president is richer in theories than I. I shall spare you the recital of mine (which I trust he will not when the occasion offers) and give you only facts.

The most interesting batch of seedlings, for several reasons, that I have grown, came from a pod which was fertilized by a single flower. Two-thirds of them were double, about as large a proportion as we usually get when both parents are double, and the growth and vitality were exceptional even for seedlings. Thos. Cartledge was one of them and made the finest lot of plants I had in the field last summer. There were about twenty-five plants in the original batch, eight of which were saved. They may probably be reduced this winter to four, which will still be a very good percentage. Mr. Fred Dorner says 5 per cent of valuable seedlings is a good proportion, so I ought to be well satisfied with this result.

I wrote to Mr. Thorpe last winter asking information in regard to cross-fertilization and he advised in-breeding. His theory (if I understood it) was that when one has a number of seedlings of the same blood that in crossing these there is less liability of some disturbing outside element entering into the calculations. This was a surprise to me and I should fear loss of vitality from such a course, but coming from Mr. Thorpe I must accept it.

I cannot bring this paper to a close without paying my tribute to the flower whose potent influence has given birth to this vigorous organization. The flower around which cluster so many odoriferous memories and so many auriferous hopes. Next to the rose I hold it in beauty of foliage, flower and bud; equal to it in fragrance and grace, and the time may not be far distant when the growing sister may push the elder beauty closely for preeminence. EDWARD SWAYNE.

In the discussion which followed Mr. L. Wight said that he had had a similar experience in crossing single and double varieties. The best varieties he has ever produced have resulted from such crosses. He selects healthy varieties from among the new kinds and crosses them with the

most vigorous single ones. He pays no attention to color of parents, as this seems to have but little effect on the color of the progeny.

Mr. Swayne said that by going back to primitive varieties for pollen we get much more vitality. He uses single blooming kinds only for pollen bearing parents. As to color there is a strong tendency for the pollen parent to reproduce its own color. The power varies with different varieties, some being fairly successful, while others cannot be depended upon at all.

Mr. L. Wight then read a paper on the construction of greenhouses for carnation culture.

GREENHOUSE CONSTRUCTION FOR CARNATION CULTURE.

As carnations are grown under glass the whole year, except the short time required to remove the old plants and soil and put in new, the question of the best aspect for a carnation house must include the summer as well as the winter conditions. As large and fine crops of flowers have been grown in this neighborhood in narrow north and south houses, with 6x8 glass, as in wide houses facing the south, with large glass. From this I infer that whatever the aspect there will always be light enough during the short winter months and we can devote our whole attention to dealing with the great surplus of light and heat during the long summer days. I may say in passing, that I am giving merely the local experience of a small number of growers in this neighborhood, some of whom are well known as very successful. Our experience is that an aspect which will bring the sun's rays in a line with the ridge at half past one or two o'clock affords us the best protection.

As far as health of plants and production of flowers is concerned I do not see that it makes much difference what the shape of the house is; but a three-quarter span is to be preferred, because it is better adapted to some other crops in case a change should be desired. Experience here shows that most if not all the varieties of carnations which we grow will do as well in solid beds as in benches, and the plan of having a solid bed in the center and two side benches is growing in favor. The solid bed should not be over six feet wide, allowing eight rows of plants, and it should be built well up so as to be at a convenient height for working among the plants. This will give a house from 16 to 18 feet wide according to the width of the side benches.

A common way of constructing walls is to set posts five or six feet apart, spike the plate to the top of the post, the plate being grooved on the under side to receive the boards, a stringer is then cut in between the posts near the ground, and the boards are put on vertically. There is one serious objection to this method. In watering the side benches more or less soil will be washed over the back of the bench which is apt to lodge on the string piece where it accumulates and, being wet during most of the season, decay soon sets in at the angle made by the stringer and the outside boarding. In one such case the boards rotted through in five years. In fact this is the weakest point in the usual greenhouse construction. A better way would be to set the posts nearer together and nail the boards on horizontally directly to the posts; then there would be no place for anything to lodge and when the posts themselves show signs of weakness it will cost but little to put in a new set between the others. A good soaking with crude petroleum will add considerably to the life of a post.

As between iron and wood for the superstructure I prefer wood; it is much cheaper and, if properly put together, will last a life time. Only clear lumber should be used; there should be no lodging places for dirt or water; all joints should be perfect and put together with thick paint; everything should be thoroughly painted and should be kept painted; neglect in this matter is fatal to the life of a greenhouse.

There does not seem to be any advantage in the use of large glass. One of the most successful growers in this neighborhood uses 10x15 single thick and third quality and does not want anything different. We like to bed the glass in putty, crown down and without springing it in the least. The least strain is sure to result in a break.

We don't use the putty bulb, preferring to draw the sash-rail in the usual manner with paint of usual thickness. The thick lead put on with the bulb is difficult to remove; it curls up at the edges and does not make a satisfactory job. It is the swelling and shrinking of the sash-rail that loosens the glass, and a light coat of paint is better than a heavy one for stopping the slight cracks made by the shrinkage and it can be put on very quickly.

Crude petroleum is an excellent thing to use upon all inside woodwork, especially the benches. A neighbor says that it drives away the sow-bugs. It will add about two years to the life of bench boards. In whatever way the bench is constructed the joist upon which the bench boards actually rest should be not over two feet apart, the shorter the bearings the longer the boards will hold. I have seen benches where the bearings were four feet and the boards were sagging badly with the weight of the soil; it does not pay to build that way.

The most important question in regard to carnation culture is undoubtedly that of soil. There is one quality the soil *must* have, and that is adhesiveness. If our experience in this neighborhood is good for anything it is settled beyond any question that carnations must be dug with good clumps of earth and without disturbing the roots. Field grown plants which are shipped a long distance with but little earth are in the worst possible condition to give good results.

There are many points concerning the culture of carnations yet undetermined. What we need is a series of experiments conducted under circumstances which will admit of an exact comparison of results. The experiences of individual growers working at a distance from each other and under different conditions, with different climate, different soil and different varieties of plants, however interesting in themselves, do not furnish any basis for comparison. Of course we learn much in this way, but it is generally from our own experience in trying to utilize the experience of others. The Carnation Society will certainly have enough to do. The need of organized effort is so obvious that it is a matter of surprise that nobody thought of it before.

It is a matter for general congratulation that the new society starts upon its career of usefulness under such able management and with such influential support. I think there are good times ahead for carnation growers. L. WIGHT.

Mr. Swayne described his method of lifting carnations in the fall. He provides pans containing about one inch of water into which the plants are placed as quickly as lifted, and in which they are transported to the beds to be planted immediately. The plan appeared to be successful with most varieties. Some few varieties were not quite successful, but he was not certain of the cause.

Mr. Lombard said that he always wants to take up his plants when the ground is dry as dust. He don't care if not a particle of soil adheres to the roots. The less soil the better, as there is less danger of breaking the fibrous roots. To avoid injury to the fibrous roots and to get plants back into the soil as quickly as possible he believed to be the most essential points to success.

Mr. Swayne said that he had used crude petroleum on part of his benches, but could not see that it arrested decay in the least. Would not say that it accelerated the rot, but it certainly did not prevent it. Pitch tar, however, he had found to be a most efficient preventive.

The secretary then read a paper on the cost of producing carnation cuttings, by J. G. Hancock.

COST OF PRODUCING CARNATION CUTTINGS.

In speaking of the cost of carnation cuttings I am aware that it is a subject upon which there is and must necessarily be great differences of opinion, inasmuch as the location and surroundings of the florist largely affect the first cost, expense of rooting the carnation cuttings, etc. The cost of unrooted cuttings taken from old and standard varieties worth but $2 per 100 will not be so great as those cut from plants costing $12 per 100 and upwards. This at the outset makes a decided difference in the first cost of the cuttings.

When the florist wishes to keep up with the times and have the best varieties of carnations to be had he must be ever on the alert to obtain the new ones as fast as they are introduced. Many of them prove to be decided acquisitions and well repay the outlay, and the introducers deserve great credit and all the money they can get for them. Others, however, prove worthless and the progressive florist pays dearly for his experience. This suggests to us a wide field for our carnation society and in following up the suggestions of our president at the last meeting, of having new varieties tested in different localities by an appointed committee before being placed upon the market, we will save the florist the expense and trouble of testing for himself the many varieties which will not be likely to prove satisfactory, as any variety thoroughly tried by a competent committee and awarded a certificate must have some degree of merit. Thus indirectly the cost of placing carnation cuttings upon the market can be materially lessened.

Another feature in regard to the cost of the unrooted cuttings is the value of the stock plants for producing cut flowers. For if a florist is situated so that he can get good prices for his flowers he can not afford to use up his plants for cuttings. I have in mind one florist who is a shrewd business man, who says that at the present prices of carnation cuttings and carnation blooms he can not afford to cut up his stock to root cuttings even for himself. No doubt there are many others who find it to their advantage to do the same.

As to the best time of making cuttings there is a difference of opinion. Some

prefer cuttings made early in the season before the plants have been forced, and others because they make large plants and so many will not be required to fill a certain space in the houses. On the other hand some desire later struck cuttings, claiming that they are not so healthy for remaining so long in the houses before being placed in the field. Personally I have found little difference except in some slow growing varieties like Hinze's White and Garfield, which should be propagated earlier than some of the quicker growing varieties such as Silver Spray and Tidal Wave. Of these latter two varieties I made cuttings last season late in May and planted in the field late in June direct from the cutting bench, which now (November 2nd) are strong bushy plants well covered with buds and blossoms. There should be at least five months, December, January, February, March and April, in which with proper care carnations can be readily struck. There are, however, in our experience some varieties which are hard to root under any circumstances.

No doubt we have all had the same experience with some customers who demand large cuttings. Now it may not come amiss to stop and inquire if the size of the cutting has anything to do with its value. I apprehend that the value of a cutting is in the plant it will make. In my opinion a small cutting, if of well ripened wood, showing no tendency to send up a flower bud, makes a more thrifty growth and a better field plant than one of extra size. The large cuttings generally have a number of joints formed before the cutting is rooted, which gives the field plant a tendency to be tall and straggling while the ideal field plant is short and bushy.

In this subject of rooted cuttings of carnations it may not be out of place to consider if the business principles applied in other branches of industry might not apply here. Can the florist who roots carnations by the hundreds of thousands produce cheaper than the one who produces only a limited quantity? In either case can the limited grower or the extensive one afford to place his products upon the market at prices which will not allow of a fair profit? A little experience of mine last year might not be out of order right here. Very early in the season some growers quoted prices lower than I could afford to sell, properly valuing my stock. After debating some time as to whether I should adopt the motto "I shall not be undersold" or whether I should ask a fair price I decided upon the latter, sold my entire stock of the varieties in question, then bought more from the Atlantic coast, paying high express rates and reshipped again to the east still making a small margin. JAMES G. HANCOCK.

The subject was discussed at length by Messrs. Herr, Lombard, Wight and others without getting anywhere near an estimate on the cost of producing cuttings, excepting that Mr. Wight said that with some varieties he finds that every cutting which he takes costs him 10 cents at least in value of blooms sacrificed.

The best manner of obtaining cuttings proved to be an interesting subject, Mr. Lombard claiming that taking cuttings from a plant has a tendency to make the flowers on that plant burst the calyx. He never stakes a carnation from which he desires to obtain cuttings, but allows it to lie naturally on the bed, which induces many more breaks from the joints.

Mr. Wm. Swayne said that if he had plants enough he would never take anything for propagating purposes except two or three top tips of blooming stems, but is of necessity forced to take other wood. If possible young plants should not be grown from a lot of stuff taken from the base of the plants. This theory was favored by most of the speakers.

Mr. Ward then read a very intelligently written and interesting paper on Business Methods, which will appear in a future number of the FLORIST.

Mr. Lombard read a few notes on the Dissemination of New Varieties. He said that care should be taken that none but good varieties should be disseminated, requisite qualities being healthy robust growth, free and continuous blooming, and calyx free from tendency to burst. He could not mention any variety which had grown well in all locations, but thought Ferd. Mangold came nearest to that ideal. A man should not attempt to disseminate a new variety until he had sufficient stock to meet all demands. Another important point he thought was uniformity in price, ten dollars per hundred being in his opinion enough to ask for a new variety. Plants and flowers should be exhibited as extensively as possible, that all who are interested may have good opportunity to see for themselves. He spoke strongly in advocacy of truthfulness of descriptions and cuts in catalogues and price lists, showing the variety in as favorable a light as possible but never exaggerating. Referring to Mr. Thorpe's ideal of a 4-inch bloom he said we will have to wait a long time for it, and did not see any great opening for such carnations in the market provided they were obtainable. This latter opinion was not exactly in accord with the sentiments of several others who thought that there would always be people who would be glad to buy the best and to pay well for it.

The question as to whether a variety runs out in a certain number of years as claimed by Mr. Fred Dorner came up and was discussed merrily. Mr. Delmar thought that instead of running out, old varieties might even be improved by good systems of propagation. Mr. Lombard thought that it was a law of nature that any plant from seed, even if carefully reproduced by cuttings must eventually die out. Mr. Dillon did not agree with him, and instanced La Purite and Edwardsii as proofs to the contrary. Mr. Lonsdale said that DeGraw is thrifty enough with one of his neighbors and shows no signs of breaking up. Edward Swayne favored the idea that the plants eventually run out, although it no doubt varies with different varieties as to length of time. Mr. Ward said that Peter Henderson held that varieties run out only on account of improper and careless culture.

After the discussion a committee of three, consisting of A. M. Herr, H. E. Chitty and C. J. Pennock, was appointed to have authority to establish a list of new sorts as they come out, and to supervise carnation nomenclature generally.

The meeting then adjourned.

"Afraid to Tell the Truth"

On or about October 18 the *Rural New Yorker* received manuscript from Mr. Wm. Falconer of the some article which appears in your issue dated October 29, page 252. I replied at once that the article would be printed as written if he so insisted, but that I hoped, for several reasons given, that he would prefer to omit the sentence which accuses the *R. N. Y.* of "a cowardly act." One of these reasons was that in a note to me, written several months ago, Mr. F. stated that the results of the committee's investigations would astound the public. Replying to this, I begged that he would furnish us with the particulars of these revelations at the earliest possible date, that we might present them to our readers. No reply was received, and I was left to infer that we must wait for them until they should appear in the society's proceedings.

The appearance of Mr. Falconer's article under the above caption (page 252) is the only intimation I have had that he declined to modify it in any way.

Mr. Falconer says that he "appealed to the *R. N. Y.* and to its readers for information about any plant grown under two names or more, * * * or any instance wherein a dealer or florist misnamed a plant intentionally for selfish or mercenary motives." Further than this, "believing the *R. N. Y.* to be actively interested in this sort of work, I personally appealed to the editor as an individual, soliciting his aid in this nomenclature business."

"His reply," Mr. F. continues, "was courteous, but he did not bring any case to my notice." The appeal, however, was promptly placed before our readers, and their cordial co-operation urgently solicited.

Mr. F. has been a valued contributor to the *R. N. Y.* for many years, and has during the entire period been a careful reader of its contents. If there has been one thing more than another that during my editorial life of 20 years I have without fear or favor endeavored to expose and condemn, it has been the rascally practice of certain seedsmen, nurserymen, etc., of misrepresenting the wares they have offered to the people, either by grossly exaggerated or absolutely false claims, or by the use of new names to accelerate the sale of old things. If the AMERICAN FLORIST were willing to print a list of such instances I would gladly furnish it. That examples of this character during the past year have not been wanting, the fact that the *R. N. Y.* has been sued for $75.000 by a prominent seedsman and florist may be cited in evidence.

Ever since the committee on nomenclature of the S. A. F. was announced, every instance worthy of note of such violations of honorable business methods that have come to my notice has been presented in the *R. N. Y.* and denounced. Have these instances escaped Mr. Falconer? By no means. I have several letters from him, some of which commend, some of which criticize these exposures. As in this way every case of false naming, etc. that I have known about has been promptly printed in the *R. N. Y.*, and as Mr. F. has read every one of them, it will appear that it would have been a needless task to rewrite what the chairman of the committee was already quite familiar with.

Since the committee's report, which informed us that it "had found it a difficult matter to find out mistakes intentionally committed with a view to deceive and defraud," I have sought information from several leading members of the S. A. F., whose names I have—at present, at any rate—no right to divulge. "Why is it," I asked, "that the committee did not publish the whole truth?" The replies were in substance, "The committee does not dare to do so. It would result in a breaking up of the society or in libel suits which it could not stand. Every member of the committee knows this and feels that he has been engaged in a work, the ugly parts of which must be smoothed over or suppressed."

The objectionable editorial note in the *R. N. Y.*, which the chairman quotes, was, therefore, written with the view of saying what the committee, for reasons of policy, did not deem it judicious to say. The committee, we assumed, gave greater weight to the necessity of maintaining an *entente cordiale* than by telling unpalatable truths to endanger the union and harmony of the society.

We have made no charge that the committee was not *"prompt and fearless in its investigations"* The charge is that it has not promptly and fearlessly presented the results to the public.

That there is anything "untrue" or "cowardly" in the *R. N. Y.'s* position must rest upon other evidence than the assertion of the accomplished chairman of the committee on nomenclature of the worthy Society of American Florists.

E. S. CARMAN.

River Edge, Bergen Co., N. J.

[The sentence in the nomenclature committee's report that has so greatly disappointed the *R. N. Y.* will be heartily endorsed by every fair-minded florist in the country, certainly the FLORIST endorses it, and we do pretend to have considerable means of knowing something about the florists and the florist business in this country. And while Mr. F. was reading from his report before the S. A. F. at the convention at Toronto, his audience right there and then applauded that very sentence. They knew the truth, and they were neither slow nor afraid to show their appreciation of the truth.

The present report of the nomenclature committee is one of the most vigorous and substantial papers ever presented to the society, a paper from first to last filled with solid common sense.

Mr. F.'s letter was mailed to us on Thursday, October 15, and he informed us that he had mailed an identical letter to the editor of the *R. N. Y.* the same day in New York City. No doubt whatever facts Mr. F. has gleaned from the *R. N. Y.* have been made good use of by him. The FLORIST is perfectly willing to publish facts about frauds perpetrated by florists, but they have got to be substantiated facts. According to circulars freely distributed at the *Agricultural Fairs* this fall, we were told the *R. N. Y.* was being sued for $150,000; there's a big difference between that amount and $75,000.

From what we know of Mr. F. we are satisfied that he is both able and willing to abide by every word he has written in private correspondence or public print.

The committee have treated the whole matter in a gentlemanly, straightforward and forcible manner, and they have not catered to any morbid taste or curiosity. In fact, they one and all ill deserve the charge made by the *R. N. Y.* that they are *afraid* to tell the truth. They were appointed by the S. A. F. to handle the nomenclature question. They are the servants of the S. A. F.: they are responsible to the S. A. F., and the S. A. F. are highly satisfied with the way and manner in which they have performed their duties and the work they have accomplished, and especially do they appreciate the labors of the chairman of the committee. And we are strongly of the opinion that any "assertion" made by the chairman will not only receive the ready endorsement of every one of his colleagues, but the S. A. F. at large as well, the *R. N. Y.* notwithstanding.

The florists of America are not the thieves, robbers and blacklegs some folks would fain paint them; they are a hard-working, honest, and honorable people, and we are proud of them. And we rejoice to know that after the strictest investigations made by a committee of the most uncompromising practical florists in the country, they "found it a difficult matter to find out *many* mistakes intentionally committed." Our correspondent will please observe that he has, for some reason or other known to himself, probably, omitted the word "many" in his quotation.—ED.]

Boston.

The November meeting of the Gardeners' and Florists' Club took place on Tuesday Eve., Nov. 3. This being election day, the rival attractions of the stereopticon bulletins on Washington street proved too much for some of the members but the meeting was fairly well attended, notwithstanding. Pres. Morton occupied the chair and Mr. W. H Long served as secretary pro tem. Mr. Robt. Farquhar, chairman of the committee appointed to procure a charter for the club, brought up that matter, asking for further instructions. In the discussion that followed Mr. P. Welch waxed eloquent and expounded to his hearers the duties and the limitations of a chairman of a committee to the great amusement of Mr. Ed. Hatch and Judge Hoitt, who encouraged him on as best they could. The committee on revision of the by-laws made a report recommending that the name of the club be changed to the "Gardener and Florist Educational Society of Boston." This will be acted upon at the next meeting.

Mr. S. Coleman reported for the committee in charge that the bowling match would take place on the afternoon of November 11, and the annual supper on the evening of the same day. Mr. H. Bayersdorfer and John Walker, of Philadelphia, being present were called upon to make a few remarks, and responded accordingly. Much enthusiasm was created by the reception of a telegram from New York that the secretary of the club, Mr. E. A. Wood (Little Wooddie), had beaten the New Yorkers on their own ground and had captured the big premium for chrysanthemum blooms, and that his big pink seedling Ed. Hatch was sweeping everything before it in the cup contest. Mr. Hatch himself feels deeply his duty to his associates in connection with the latter matter and is understood to be already making preparations for a suitable acknowledgement of the honor.

The cut flower trade is in bad shape. Chrysanthemums are coming in by the cart load and there is no longer any established price on them. Roses feel the pressure and also are in the dumps. Carnations hold their price fairly well. There is not likely to be much change for the better for a couple of weeks.

Philadelphia.

Good chrysanthemums are selling well at from $3 to $5 a dozen retail; pot plants are also moving lively at prices varying from 5 cents to $3.

The past week business has been quiet with a grand wind up on Saturday, when there was a rush for violets, dark red roses and carnations and yellow roses and chrysanthemums, these being the colors of the University of Pennsylvania and Princeton College.

There was a grand foot ball match in the afternoon, the attendance being something like 20,000 people. A great many ladies were present and nearly all wore the colors of their favorites, while their escorts wore immense yellow chrysanthemums or violets and dark red roses or carnations in their buttonholes.

In the contest the large yellow chrysanthemum proved to be too much for the modest and retiring violet, and the University boys were defeated. But some day the violet will emerge from its retirement and the atmosphere hereabouts will assume a cerulean hue and the air will be redolent with the fragrance of this popular flower.

There was a general exodus of the trade here to the New York show, and certainly nobody could but be satisfied with their visit, for it was a fine exhibition taken altogether. The chrysanthemums in pots were not up to expectation, and the show in Philadelphia will very largely excel them in this department, but we doubt very much if it will be possible to equal the display of cut blooms, which were certainly the finest so far exhibited in this country.

The vases of Mrs. Hardy in the Henderson collection were a revelation, nothing approaching them, having been on exhibition before.

A few varieties that we thought particularly fine were: Vivian Morrell, very large pink and of fine form, this was in the Dailledouze collection; Edward Hatch, one of Wood's seedlings, a very fine pink, perfect form, a truly magnificent flower, this was purchased by Gurney Hill; Mrs. E. D. Adams, a Pitcher & Manda seedling, an immense white with a faint lemon tint. These three will certainly be seen in exhibition collections for some time to come.

The ten pin match which came off Tuesday afternoon, Nov. 3, was very exciting. At first it seemed as if the Gotham boys were not "in it," but as the game wore on they seemed to gain confidence and the Philadelphia boys became nervous and finally rattled; when at the end of the fifth frame of the last game it was seen that the score was tied, they went to pieces and the New York boys won in a canter. Kennedy played a steady game, but all the others seemed to lose their grip and threw away easy chances for spares. But this is characteristic of the game, for the best rollers sometimes make very poor scores.

The Florists' Club turned out in goodly numbers last Sunday and under the guidance of John Westcott, the superintendent of the chrysanthemum exhibition, Horticultural Hall was decorated in fine style with greens, autumn leaves, Japanese lanterns, parasols and the like.

There promises to be fine collections of cut roses and the competition in the arrangement of floral designs, such as plateaus, table pieces, etc., will be very close.

New York.

The cut flower market is at a stand still. Roses and chrysanthemums are coming in faster than they can be handled. The chrysanthemum show has been the all absorbing topic among the brethren and they seem to have forgotten all else.

Pitcher & Manda accomplished a great feat. Their own chrysanthemum show closed at their greenhouses at Short Hills, N. J., on Saturday night. By Monday morning they had transported to New York City and arranged in Madison Square Garden, ready for judging, their whole chrysanthemum exhibit, besides a very extensive collection of foliage plants and orchids in bloom. It was a tremendous undertaking.

The great bowling contest between New York and Philadelphia came off as announced at Immen's Alleys, corner of Fourth avenue and 32nd street, on Tuesday p. m., Nov. 3. Three games were played. The scores were as follows:

	New York.	Phila.
1st game	782	867
2nd game	932	850
3rd game	913	857
	2627	2574

Balance in favor of New York 53. This glorious result was announced to the assembled crowds in a bedlam of yells which would have put a tribe of wild Indians to shame, Mr. Ernst Asmus officiating as chief howler.

The dinner tendered by the Madison Square Garden Company to the judges at the chrysanthemum show on Monday evening at the Garden restaurant was a brilliant and successful affair. The table was beautifully decorated with baskets and vases of chrysanthemums, American Beauties and Cusins. There were present of the garden company Mr. A. Ladenburg, who officiated as chairman, Secretary J. W. Morrissey, F. K. Sturgis and others. Representing the New York Florist Club were Jas. Dean, J. N. May, C. B. Weathered, J. H. Taylor, S. C. Nash, Alex Burns, Gus Bennett, Ernst Asmus, A. Dimmock, Wm. Plumb and John Young.

Among the invited guests were W. R. Smith and J. R. Freeman, of Washington; H. H. Battles, Rob't Craig, W. K. Harris, John Westcott and Ed Lonsdale, of Philadelphia; J. T. Anthony, of Chicago; Mr. Meredith, of Pittsfield, Mass.; E. A. Wood and W. J. Stewart, of Boston; E. G. Hill, of Richmond, Ind; B. F. Dorrance, of Wilkesbarre; Mr. Murdoch, of Pittsburg; Thos. H. Spaulding, of Orange; J. R. Pitcher, of Short Hills; and W. J. Palmer, of Buffalo.

Chairman Ladenburg made a speech of welcome in which he thanked the judges for their services rendered and paid a high compliment to horticulture as a pursuit.

He was followed by Pres. Burns, who spoke for the New York Florist Club, and said that if the chrysanthemum kept on going we should soon have blooms of such a size that one would make a center piece. President-elect Dean spoke for the Society of American Florists. Short addresses followed from Rob't Craig and E. G. Hill and the pleasant occasion came to an end with many hearty expressions of good will and predictions of success.

Overheard in the exhibition: "There, see that palm there, that martinezia? Well, I call that the Lawyer Palm because it is so full of points!" It is unnecessary to add that the voice was that of W. R. Smith.

Toronto.

Just at this time chrysanthemum show matters take precedence over all others amongst horticulturists, and the secretaries of the various clubs are hustling things generally. In this city the show is certainly well advertised; one can hardly walk a block without the word "chrysanthemum" staring him in the face. The daily papers have been well "fixed," too, and a good crop of "locals" has been the result.

Entries have been coming in well, though there are many more sure ones to come yet. Everything points to the best show that has been held in Toronto yet.

Messrs. Pitcher & Manda, of Short Hills, N. J., will send cut blooms for competition in several sections, but from what I have seen about town I don't think they are going to take all the firsts. Several other firms from over the border will send cut blooms, too, but not for competition.

Single stem, single flower plants will be well represented, also plants of Mrs. Alpheus Hardy and Louis Boehmer. Concerning the latter, I have yet to hear a favorable opinion as to color; "dull," "muddy," "no good for market," seems to be the verdict. "Big" and "hairy" are its good points.

My next letter will be a report of the show. May the first word of it be "success," and may the reports of all the other shows begin with the same magic word. E.

Chicago.

The exhibition opened Tuesday and the display is very far in advance of that at any previous exhibition in this city. The show can be set down as a decided success as a display, but the financial outlook is not encouraging. It began to rain Saturday and has continued to drizzle dismally up to Tuesday afternoon. Worse weather could not have been devised and unless it changes before the exhibition closes the attendance will be light, for it would be folly to expect anything but an exceedingly light attendance during such extremely forbidding weather. Full report in next issue.

Miscellaneous Plant Notes.

BY WM. FALCONER.

THE STRIPED-FLOWERED NYMPHÆA.—Mr. Benjamin Grey, of Malden, Mass., a specialist in ornamental aquatic plants, writes me apropos of the Brooklyn striped lily mentioned on page 166 of the FLORIST. "If it will continue to keep its marks it will be a great novelty, for it is certainly a strange freak and pretty. As you are aware, however, Nymphæa Devoniensis is a garden hybrid between N. Lotus and N. rubra, the latter being only a red variety of N. Lotus, which is usually white, but varying to striped or pink. May be it was an attempt to revert to N. Lotus.

A BIG CEREUS TRIANGULARIS.—Mrs. Shepherd tells me about a plant which is growing against the corner of her residence in Ventura. It is 11 years old, with vine-like stems 35 feet long that reach to the top of the two-story house and intertwine together, clinging to the building by means of strong, cord-like roots, which it unites from its side next the boards. This is one of the rankest growing vines of the genus, night blooming, and it has the largest flowers; they are pale yellow, and 12 to 15 inches across.

MUSA ENSETE, a Californian specimen.—Mrs. Shepherd sends me a photograph of a commanding specimen in her garden, showing flower and fruit and bold leaves tattered and torn by strong winds. She writes: "It was 25 feet in height; stem, 9 feet in circumference, 3 feet from the ground; flower raceme 6 feet long, and it ripened 6,000 seeds."

BLANCHE FERRY SWEET PEA.—Mr. C. L. Burr, of Springfield, Mass., says: "Planted with other varieties, it came into bloom two weeks earlier than they did, and sold in the stores for a good price before the rush of sweet peas came in. But I have not found it dwarf, as recommended; with me it requires brushing."

DOUBLE CORNFLOWERS.—Mr. Burr says he found four plants among his lot last year that showed extra points in the way of doubleness. He isolated them and saved seed from them, and in the seedlings raised this year from these seeds he finds a marked improvement over the ordinary strain. Selection pays. He also writes:

"THE MARGUERITE CARNATION is a good thing, and the new dwarf variety is an improvement, but not quite fixed yet."

THE LILIPUT ZINNIAS he also recommends, but they need selection.

Store Trade.

This department will be devoted to matters of interest to the retail, or store florist. Communications invited.

An Unfortunate Situation.

Three young men recently called at a store in this city and ordered on the same day, to be delivered to the same young lady, flowers as follows: A ordered two dozen mixed roses, made up into a corsage bouquet; B ordered two dozen red roses in a corsage, and C ordered two dozen Bride roses. All left a note to go with the flowers requesting the young lady to wear the flowers that evening.

Question: How could she most gracefully comply with all these requests?

P.

It is more in our province to advise as to the best and fashionable way to arrange and send flowers than it is to answer the question as stated. To answer it, it would be necessary to grapple with a social problem far beyond our experience.

The act of one lady, pleasing three men, is a problem that has been a poser for centuries. Among the men that have tackled it you will find such names as Plato, Socrates, Webster, Train, J. L. Sullivan, and many others of equal force, but to no purpose. The secret is still hidden behind a gentle voice and pleasant smiles. Many men have conquered many snubs and many smiles have conquered many men, but the problem still remains unsolved.

We have a number of times in these columns advised against large corsage bouquets, and especially so when the wishes of the lady that is to wear them are not known. It would have been far better had A, B and C sent a pretty assortment of well chosen flowers that the lady might select those she wished to wear. The color and cut of the dress are always to be considered.

For a moment imagine that a lady is going to wear a dress of some shade of purple and cut decollette, what can she possibly do with a bunch of twenty-four red roses that B has ordered? A we think still more unfortunate in his selection. As the young lady was going to a reception it would also have been in good form for the men to have had the flowers loosely arranged in hand bouquets.

If any one of the three were to accompany her it would not have been out of place for him to have asked her preference as to color, etc., yet even this is a very delicate question. But it is putting quite a tax on a young lady's disposition to ask her to wear a large bouquet which may not at all be suited to her costume.

YOU CAN give the AMERICAN FLORIST your fullest support by confining your orders to those who advertise in its columns, and when ordering mentioning the fact that you were induced to order by the adv. in the FLORIST.

THE AMERICAN FLORIST

Subscription $1.00 a Year. To Europe, $2.00.

Advertisements, 10 Cents a Line, Agate; Inch, $1.40; Column, $14.00. Cash with Order.

No Special Position Guaranteed.

Discounts, 6 times, 5 per cent; 13 times, 10 per cent; 26 times, 20 per cent; 52 times, 30 per cent. No reduction made for large space.

The Advertising Department of the AMERICAN FLORIST is for Florists, Seedsmen, and dealers in wares pertaining to those lines ONLY. Please to remember it.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

THE PRESS AND POPULAR FLOWERS.

Both as a flower show and financially the chrysanthemum exhibition recently held in New York has been an unparalleled success and this was largely due to the unstinted support given to it by the great newspapers of the city. Not only did the press give prominent and full reports of the exhibition, but by illustrated articles on chrysanthemuns before the show opened, the public appetite was whetted for a sight of the regal beauties. The most prominent of these chrysanthemum articles, five columns long and freely illustrated, appeared in the *Sun* of Sunday, Nov. 1. And instead of being a gushy, aerial screed, as we often find about flowers in the daily press, it is a carefully written, historical and practical article, trustworthy throughout and easily understood by anybody. Material of this sort cannot fail to do good.

THE American Carnation Society is an exceedingly robust infant. The second meeting, held last week for the purpose of completing the organization, was, as will be seen by the report in this issue of the FLORIST, of very great value to its members, and in fact to every carnation grower in America. It is very gratifying to note the active interest shown, and above all the actual work that was accomplished. Such a society, full of life and vigor, realizing the necessity for good work and possessing the power and inclination to put good ideas into execution, is a grand, good thing.

"WHY DO YOU preach so much about cost of production?" some one may ask. Because we believe that if every grower knew when he had got down to the cost line he would call a halt, whereas now many drop below this line without knowing it, in the heat of competition, and thereby injure the whole trade, as well as themselves. It is for the best interests of the whole trade that everyone in it should be educated up to the absolute necessity of knowing positively what it costs him to produce the plants he sells. A man will not knowingly grow stuff at a loss—not a second time, at least.

A NEW YORK daily paper tells us that Hindoo women of certain castes in a portion of India have given up wearing nose jewels and have substituted flowers therefor. And an illustration that adorns its columns shows one of these Hindoo women wearing a small chrysanthemum in her nose. The rich and peculiarly penetrating "fragrance" of the chrysanthemum must make it an extremely desirable nose ornament.

JUDGING from the clippings from daily papers that are sent us the exhibitions have in nearly every case received very generous advance notices from the daily press.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser in these columns.

Rose Notes.

The roses grown by Mr. D. B. Fuller, of Downer's Grove, Ill., who retails all his flowers in his Chicago store, are of the following varieties: Brides, Mermets, Perles, Woottons, La France, Albany and Gontier.

Speaking of the Wootton, Mr. Thos. Hopkinson, Mr. Fuller's foreman, said: "We like it and consider it a profitable rose to grow for cut flowers. There are a good many defective buds, but on the whole it is very satisfactory."

He likes the Albany too. Some of the buds come deformed, but he cuts so many finely colored buds that the average results are satisfying.

He also has a good word for the Gontier, and while he laughs at the idea of cutting more buds from a given space of this rose than from an equal space of Bon Silene he says that the Gontier certainly does give larger returns per square foot, but wholly on account of the better prices that the Gontier buds bring.

Chrysanthemum Names

Messrs. Pitcher & Manda, Short Hills, N. J., have registered "W. A. Manda." A flower was sent and it resembles Mrs. A. Hardy in form and hairiness but the color is a rich deep yellow.

EDWIN LONSDALE,
Sec'y Am. Chrysanthemum Society.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

The Vick Auction Sale.

Some bitter comments are made by the creditors on the short notice given of the sale. The fact that creditors were not permitted to inspect inventory, and the fact that goods, lists of names, etc., aggregating some $40,000 or $50,000, were sold for about $5,000. It is said creditors will receive a very small percentage on their claims.

A Liberal Commission.

The following letter, copied verbatim, would indicate a shocking state of affairs in the commission seed trade:

———, Texas, October 30, 1891.—THE HARNDEN SEED CO.—*Dear Sirs:* Your terms on seeds to sell on commission to hand. It seems you only allow 40 % commission on all seeds sold, while ——— & Co. allow 100 % on all seeds sold. Unless you could do as well as ——— & Co., we would not handle your goods.

Yours truly, ———.

VISITED CHICAGO: C. A. Morse, J. A. Robbins, Henry A. Salzer, A. H. Goodwin, J. Cómont.

W. R. STRONG & Co., seedsmen, of Sacramento, Cal., are reported to have failed with liabilities of $200,000.

WHAT WILL be the retail price on onion seed? Shall it be 25 cents per pound higher? Let us hear from Mr. Maule.

RED Wethersfield onion is firm at 85 to 90 cents per pound in quantity. White onion scarce. Cucumber not in the market.

MR. HENRY A. SALZER does not anticipate as large a general seed trade the coming season as last, owing to the large supply grown by most farmers.

Carnation Notes.

D. B. Fuller, of Downer's Grove, Ill., sells nearly all his flowers in his Chicago store, and below is given the varieties he grows and the number of plants of each, showing the proportion that he has found most advisable.

In whites he grows nothing but Silver Spray, and of these he has 1,500 plants.

In red, President Garfield is his reliance, and he grows 1,000 plants of this sort.

Of pink sorts he grows 500 plants of Tidal Wave and 1,000 plants of a variety known around Chicago as "Anthony's Pink." The last named carnation was received by Mr. Anthony some years ago from an eastern florist under the label, "Queen of the Whites." And from this one plant has been grown the stocks held by Chicago growers. When flowers were sent to the party from whom the "Queen of the Whites" were obtained, he was unable to name it. And for the lack of its real name it has been called "Anthony's Pink." This seems to be a case for the American Carnation Society to look into.

Mr. Fuller's soil is a loamy clay, and he uses the same soil for his carnations that he does for his roses.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser in these columns.

Please mention the AMERICAN FLORIST every time you write any of the advertisers on this page.

News Notes.

GALESBURG, ILL.—Pillsbury & Gesler are building a new house 80x20, to be used mainly for growing cut flowers.

SAN FRANCISCO.—The chrysanthemum show of the California State Floral Society, October 28 to 30, was very successful.

COLUMBUS, OHIO.—At the October meeting of the Horticultural Society, Prof. F. M. Webster delivered a most interesting address on parasitism.

LAWRENCE, KANS.—Mrs. P. R. Brooks will give an exhibition of chrysanthemums and other flowers and plants the 11th, 12th and 13th insts.

LITTLE ROCK, ARK.—The project of a chrysanthemum show has been abandoned for this year. Hope one will materialize O K for next autumn.

PUEBLO, COLO.—Willam Clark, the Colorado Springs florist, has opened a cut flower store at 116 Central Block in this city. Frank Hayden is manager.

SAGINAW, MICH.—Florists A. Grohman & Son, Mrs. George Waldbauer, and J. B. Goetz will give a chrysanthemum show at Arbeiter Hall the 11th to the 14th insts., inclusive.

PUEBLO, COLO.—The Pueblo District Horticultural Society will give its first annual chrysanthemum show November 17 and 18. The prizes offered are mainly diplomas. The exhibition will be held in the Board of Trade building. Mr. E. Brayton is secretary of the society.

TOLEDO, OHIO.—Mr. Edward Salyer, foreman at George A. Heinl's, will leave Toledo early in November to accept a position with Nathan Smith & Son, at Adrian, Mich. During his stay in Toledo Mr. Salyer has made many friends, who greatly regret his departure from the city, and all join in wishing him every success in his new position.

Scented Tuberous Begonias.

I notice in the FLORIST a number of articles devoted to the tuberous begonia, but have not yet noticed any mention of perfumed or scented varieties. I have been experimenting with tuberous begonias ever since their first introduction and two years ago I produced a scented variety. Is this rare or uncommon? The perfume of mine is identical with that of a Marechal Niel rose, though perhaps not quite so strong. FRED MITCHELL.

Innerkip, Ontario.

WHEN you write an advertiser tell him that you saw his advertisement in the AMERICAN FLORIST.

WANTED.

ROOTED CUTTINGS.

CARNATIONS AND OTHER STOCK.

I will devote some 30,000 feet of glass to Carnations this season, and will give my whole time and attention to the getting out of strictly first class cuttings.

Of the three best Novelties of last season (**GOLDEN GATE, HECTOR** and **LIZZIE McGOWAN**) I have an extra large stock, and in the best of condition.

My Miscellaneous Stock will occupy some 7,000 feet of glass and consist of **GERANIUMS, FUCHSIAS, COLEUS, ETC.** It will be grown for me by Mr. D. K. Herr, and gotten up in better shape than if I were to grow both these and Carnations myself.

Give me a chance to figure on your orders. List on application. Satisfaction assured.

I don't want the small kind of Plants. if you do rite buy me I will buy you."

Transatlantic Wit.

Bill B—— was a bothy poet. Parodies were his great hold, and his bothy mates thought him very clever.

One day some boiled salt beef was the dinner fare, and it proved to be unmercifully tough. Bill tried a bite and was mastered. His mates saw from his countenance that something was coming, and they had not long to wait before Bill, with tragic voice and gesture, burst forth thus:

"Old horse, old horse, what brought ye here,
Ye've carted stones for many a year;
Worn out at last by sore abuse,
Ye've been salted doon for bothy use."

Dove Manure

Will some reader of the FLORIST enlighten me as to the best way of applying dove manure, and what plants it would best suit? I am where I can get it in large quantities, but am unfamiliar with its value as a fertilizer. I grow roses and carnations, principally for the wholesale trade. B. W. SMITH.

J. B. KELLER, FLORIST,

Rochester, N. Y.

ENGLISH BEGONIAS.

The unrivaled plant for Bedding as well as for Glass.

BOX'S CHOICE HYBRIDS are best wherever tried. H. C. Merriam, Esq., of Salem, writes to J. R. B. on 29th Sept., 1891: "I wish to express my delight in the Begonias you supplied to a firm of florists here, from which I have added many to my own collection, they are finer than any named varieties I have seen." The Elyria Weekly *Republic* of Ohio, reporting the display of Begonias and Gloxinias (supplied by J. R. B.) at Copes & Son's greenhouses says: "They are enthusiastically admired by all lovers of choice plants." Mrs. Parks Foster asserts "that for a brilliant mass of bloom they excel anything of the kind she saw in Europe, where they make a specialty of these favorite flowers. The shades of color are gorgeous and most brilliant."

BEGONIA TUBERS ready for dispatch in November, the cheapest as well as the best on market.

Singles, BOX'S CHOICE HYBRIDS, all colors mixed, 1st size, $4.50 per 100; 2nd size, $4 00 per 100.
Singles, BOX'S CHOICE HYBRIDS, in separate colors, viz: Crimson, Scarlet, Rosy Pink, White, Yellow, and Golden Orange; these 6 choice varieties assorted or separate, $5.50 per 100.
The same, extra selected for pot work, $8.00 per 100.
Doubles, BOX'S CHOICE HYBRIDS, mixed colors, 1st size, $12.50 per 100; 2nd size, $10.00 per 100.
Doubles, BOX'S CHOICE HYBRIDS, in 6 separate colors, $16.50 per 100; extra selected, $3.00 per 10.

BEGONIA SEED. The quality of Box's seed is far ahead of others, buyers discard other strains. J. R. B. has already booked orders for nearly $500 worth for November delivery. You can have packets of fixed quantities, mixed or in 6 separate colors, of either double or single, at 1, 2, or 5 dollars per packet. With this seed you can "get in" to advantage and raise thousands of tubers next season. An Indiana grower sends this line: "I have raised some grand Begonias from your seed."

BOX'S OTHER SPECIALTIES are GLOXINIAS, splendid mixed colors, chiefly spotted, $6 per 100; seed, $1 per packet. CALADIUMS, named sorts, $4 per 10. Achimenes $1 per 100. **MY ANNOUNCEMENT** on Begonias in the *Horticultural Advertiser* was posted on July 1st to 5 000 American florists—refer to page 5.

N. B.—Orders must all be prepaid and shipping cost covered. If you state your wants and leave selection to me I will give you full value for 5, 10, 20, 100 or more dollars and ship promptly. Catalogues free. Address **JOHN R. BOX, Begonia Grower, CROYDON, ENGLAND.**

When you write to any of the advertisers in this paper please say that you saw the advertisement in the AMERICAN FLORIST.

The Sympathetic Man Who Was a Regular Five-Cent Customer.

He was a grizzled, unsentimental-looking and hard-faced old man, shabbily dressed, and evidently one who had seen better days and worse nights. He was a regular customer at the florist's store on the corner, and the good looking young lady who stood behind the counter making up bouquets and serving customers had got to know him.

And yet he was only a nickel customer. He never bought costly roses, rare exotics or orchid boutonnieres. His purchase was always a little carnation with a leaf or two of smilax, or a rose bud that was worse for wear and played out for perfume. But what could you expect for a nickel?

The pretty florist noted that though he invested his nickel almost as regularly as the morning came around he never wore a button-hole bouquet. He always hid away his purchase in his shabby old hat and crept out of the store as if he was ashamed of his extravagance in decorative purposes. One day she asked him if he would like a pin with which to fix his flower to his coat.

"Oh, dear, no, miss," was his reply. "You are very kind, but I don't wear things of this sort. Nor would a pin be of much service in fixing the flower on the grave upon which I lay it."

"Pray, forgive me, sir," interposed the young lady, as a shade of pain flitted across her bright face; "pray forgive me. I had no idea that the flowers were used for such a sad purpose."

"Oh, that's all right, young lady. You haven't hurt my feelings in the least. The flowers I buy are tokens of sympathy rather than emblems of regret."

The fair florist looked puzzled.

"You don't seem to catch on," said the man. "Well, I'll explain. These flowers are to be laid upon the grave of a man whom I never saw and did not hear of until after his death. But there is a bond of sympathy which binds his memory to my life. I know he suffered as I have suffered, and from the same cause, and I never lay a little blossom on his tomb without feeling that I am paying my silent homage to the heroic fortitude with which, for twenty years, he bore up under that affliction to which I succeeded as his sole heir and residuary legatee."

"I don't understand—"

"Of course you don't, fair maid, but you will, perhaps, when I tell you that I married his widow."—*Philadelphia Times.*

CHRYSANTHEMUM flowers grown by experts near cities where they are shown have lately been exhibited in the name of growers a thousand miles away. If this practice is to prevail it should be fairly understood, to put all exhibitors on an equal footing. Why not have one expert near all large cities to grow all show flowers for outside exhibitors?

A LARGE NUMBER of additional show reports will appear in next week's issue.

Chrysanthemum Shows.

Boston.

The annual chrysanthemum show of the Mass. Hort. Society opened at Horticultural Hall, Boston, on November 10. As on previous occasions the upper hall was devoted entirely to the display of plants and the lower to cut flowers. Of disbudded and trained specimen plants there were practically none, and once more the conviction is forced upon us that the Boston growers are not inclined to devote the time and expense necessary to produce such. But the plants shown were healthy and well covered with flowers of good size. They were as a rule superior to those shown here in any former exhibition, and the grouping and massing of color was most effectively done. To some eyes, however, there is a charm about these naturally grown plants with their loose clusters of irregular blossoms and buds which is lacking in the shapely but artificial looking trained specimens, whose regularity of outline and individual perfection of bloom soon become tiresome to the eye, and which in too many cases are made positively hideous by the fearful and wonderful underpinnings and scaffoldings of the professional staker. One class of plants as seen in perfection at this present exhibition is that known as market plants. These low grown tidy little specimens with their abundant foliage and wealth of bloom are particularly attractive and are just the thing for window and hall decoration. The leading premium in the plant section, that for twelve distinct varieties, all classes, was awarded to Walter Hunnewell. These plants were very well grown, and being of various heights made a fine group, the center plant being a remarkably good specimen of Louis Boehmer, 4 to 5 feet across, well furnished with flowers of full size. Arthur Hunnewell took second premium in this class with a fine group, among which were several of the best specimens in the hall, notably W. H. Lincoln, Robt. Bottomly and Pres. Hyde. N. T. Kidder's group was third, the best plants shown here being Puritan and W. H. Lincoln.

The entries for incurved or Chinese classes were few and far between. The Japanese type seems to have captured the growers as well as the public. This is unfortunate, and the best consolation is that without a doubt there will yet be a reaction and the Chinese type will receive that attention to which its superior form entitles it. F. B. Hayes and N. T. Kidder took the best premiums in the Chinese classes.

The competition in the Japanese classes was quite brisk, the honors being divided between Arthur Hunnewell, N. T. Kidder and F. B. Hayes. For specimen trained standard Dr. C. G. Weld took all the prizes. Pompons and anemones are an almost forgotten section, but they have their place and will undoubtedly in time regain a portion of their old popularity. Dr H. P. Walcott's seedling pompon which took the first premium as single specimen was one of the most admirable plants in the exhibition. It was a perfect mound of golden blossoms, backed by clean luxuriant foliage and required no stakes. The plants in 6-inch pots bearing each a single bloom were all very good. Forty plants, not less than twenty varieties, was the number called for and the prizes were awarded to Dr. Weld, J. L. Gardner, Geo. B. Gill and the Bussey Institution respectively. The groups of market plants shown by W. H. Elliott added much to the attractiveness of the show, and their value for hall and window decoration was favorably commented upon. Another valuable addition to the display was the general collection from F. B. Hayes, which filled all of one side of the upper hall.

But it was in the department of cut flowers that this exhibition exceeded all its predecessors and surpassed in quality, by general acknowledgement, all other shows in this country. The uniformly high grade of all the exhibits here and the absence of rubbish was noted by all visitors. There was not a single exhibition board in the hall, nor a short stemmed bloom, everything being shown in vases with stems and foliage. Many of the vases, especially the very large ones, were of the richest material, adding greatly to the general effect. These were generously loaned to the society by Abram French & Co.

The $75 prize offered by the Gardeners' and Florists' Club for ten vases, ten varieties, ten long stemmed blooms of one variety in each vase, was awarded to Galvin Bros. This exhibit cannot be too highly praised, the vases of Mrs. Fottler, Domination, W. H. Lincoln, Pelican and Cullingfordii showing those varieties in wonderful perfection. It would not be a bad idea for the exhibitors, however, to introduce the Mrs. Thos. Mack chrysanthemum to the Nomenclature Committee of the S. A. F. with a diagram of the points of difference between this variety and the one exhibited by them in another stand under the name of L. Canning.

The second premium in this class, $50, was awarded to Mr. Edgar, whose display was also grand, most noticeable being the vases of Gold, Puritan, Rohallion, Cannell and Mrs. Frank Thomson.

The Henderson prize for Louis Boehmer went to Galvin Bros. for a set of six superb blooms. Messrs. Galvin Bros. also won the Bradlee Plate prize for fifty blooms. Here again was shown Mr. Coleman's superiority as a chrysanthemum grower. Ada Spaulding, L. Can-

ning, Ivory, Mrs. Fottler, Pelican, C. W. DePauw and other leading kinds being shown in unequalled perfection.

In the six vase section Lawrence Cotter, gardener to C. V. Whitten, had made up his mind to come out on top, which he did, the varieties shown being Cullingfordii, W. H. Lincoln, Violet Rose, H. E. Widener, Mrs. Alpheus Hardy and Mrs. Wheeler. Wm. Edgar came second, his L. B. Bird and Domination being especially good.

In the twelve bloom and six bloom classes the competition was very large on the Japanese kinds, but small on the Chinese kinds, the winners in the latter being E. A. Wood, J. H. White and C. G. Weld. On twelve blooms, Japanese, Jas. Brydon was first, his best specimens being Edwin Lonsdale, Violet Rose, Domination, H. E. Widener and Sandyside. A. H. Fewkes came next, showing among others Bronze Jewel, Duchess of Connaught and Etoile de Lyon in great form. On six blooms Mr. Fewkes came first and Geo. B. Gill second. The best bloom in Mr. Fewkes' lot was a superb Beacon, and in Mr. Gill's Mrs. Langtry.

In the class calling for a collection of cut blooms of not less than twelve varieties sent out during the current year, the only exhibitors were E. A. Wood and A. H. Fewkes. The former showed 18 and the latter 26 new varieties.

There were a great many seedlings shown, many of them being very promising. The first prize was awarded to Pitcher & Manda for Harry May, which also received a silver medal. The second prize and a silver medal were awarded to H. A. Gane for white seedling Mrs. Jerome Jones, and the third with honorable mention to Geo. B. Gill for Adeline Bradley, color rich coppery yellow. A set of ten superb seedlings of this year by Walter Hunnewell received honorable mention, and one of the number, the Walter Hunnewell, was given a certificate of merit. To Norris F. Comley was given honorable mention for seedling No. 2, a fine promising red. In the exhibit by Jos. H. White there were some very promising seedlings, two of the best being Jos. H. White and Mrs. S. K. Sanford, both white. To the former was awarded a certificate of merit. Other groups of seedlings were shown by Geo. Hollis, F. H. Gifford and C. D. Kingman. The latter received honorable mention for Kildare and Eglantine. Honorable mention was also given to Pitcher & Manda's new Annie Manda. Among the prime attractions of the show were mammoth vases of specimen blooms from E. M. Wood, Jas. Brydon, C. V. Whitten and J. Comley, to all of which were given liberal gratuities.

There was quite a good showing of carnation blooms. H. E. Chitty exhibited L. L. Lamborn and Lizzie McGowan, R. T. Lombard showed Golden Triumph, Edw. Swayne showed Thos. Cartledge, Sewall Fisher showed No. 113, a promising white and got honorable mention for it, L. S. Fife showed white seedling Evangeline, and Jas. Tulis staged a fine exhibit of the best standard varieties.

There was also quite an attractive display of roses. F. R. Pierson, of Tarrytown, N. Y., came with American Beauty, Cusin and Meteor; J. F. Curtis showed Mermets, and E. M. Wood & Co. Meteor, Bride, Mme. de Watteville, Cornelia Cook, Mme. Cusin and Waban. The injustice of recent attacks on the Waban was apparent to all who saw the rose as shown here. Mr. Wood says "don't judge it too hastily, have a little patience." J. H. Dunlop received honorable mention for his sport from Perle des Jardins, "Toronto."

Geo. McWilliam staged a nice group of orchids, among which was a grand plant of Dendrobium formosum giganteum. This plant, which has bloomed seven years successively, bore two spikes of 13 blooms each. In this connection the following extract from the London *Garden* of October 10, page 333, is amusing as well as interesting: "Dendrobium formosum giganteum. The flowers are very fine and five on a scape is as many as I remember to have seen. Within the last two or three years I have seen plants that have done well under cultivation, some two and others three years, whilst one plant I saw last season was flowering for the fifth time in succession."

Philadelphia.

The ninth annual chrysanthemum show opened with great *eclat* on Monday evening at Horticultural Hall, Broad street. It was said last year that for general effectiveness nothing could surpass the efforts made then. The evidences are before us that such was not the case.

Heretofore it was the exhibits in competition which first claimed attention, but now the arrangements for effect first demand notice. The symmetrical specimens of the sweet bay tree (Laurus nobilis) are among the first to be seen. Standing like silent sentinels at the entrance and within the portals, lending an importance to the affair which nothing else could do. The stairway was adorned with gracefully festooned laurel (kalmia) wreathing, hemlock boughs, forest (oak) leaves and bunting.

From the head of the stairway at the entrance to the main hall a very beautiful scene presents itself, the showy coloring of the chrysanthemums, interspersed with graceful and towering palms, gave an enchanting appearance to the whole, which was very satisfying to the beholder.

The management longed for a Madison Square Garden in which to display the plants and flowers. Up to the present time Philadelphia has appeared to be fortunate with a hall in which to hold its semi-annual floral exhibitions; but the exhibition as seen last week in New York has caused a few of the workers here to feel that the Quaker City is not so favored as the Great Gotham now is with her popular and commodious GARDEN, in which to hold its horticultural displays. In this city the show is divided into four parts: The main hall, which contained the groups of specimen plants in competition for the higher prizes, the displays of ferns, palms and other foliage plants, the foyer being occupied by the cut chrysanthemum blooms on tables around the sides, and the three dinner table decorations had possession of the center.

In the lower hall were the standard chrysanthemums and those grown in 6-inch pots, as well as some specimens equal to those in the main hall, as well as those in competition for the *Record* prize, which calls for six naturally grown plants in six varieties. Some of the entries for this premium were disqualified because evidences were apparent that disbudding had been resorted to, even if three or four flowers had been left on each shoot.

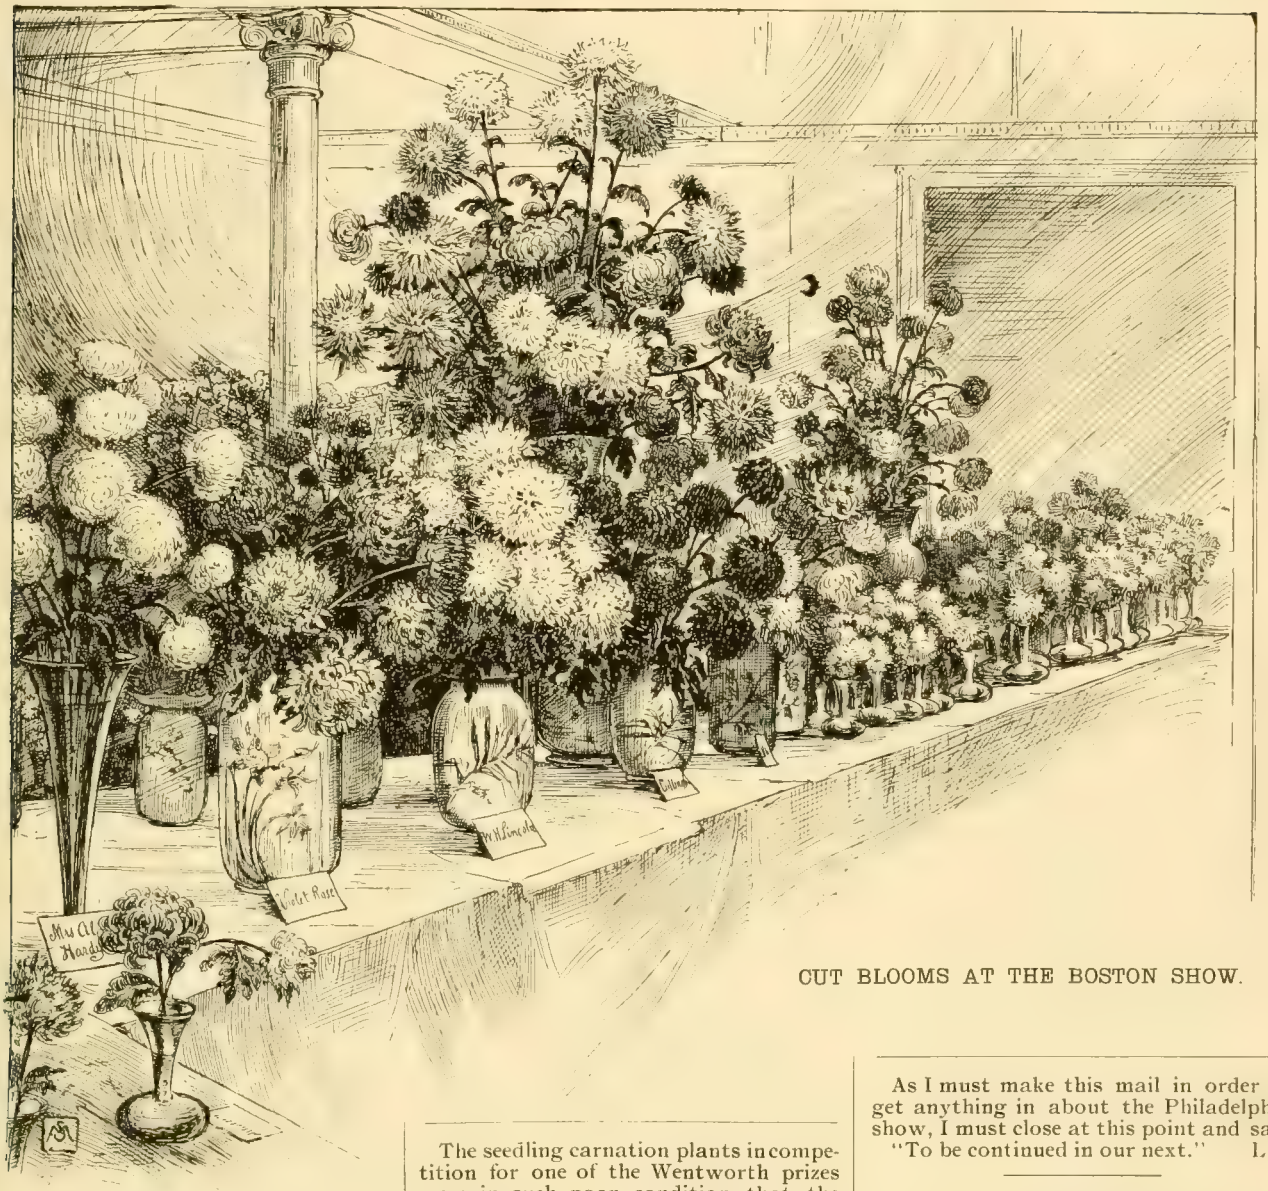
On the lower floor another room had to be pressed into service to accommodate the cut flowers, roses, carnations, pansies, etc.

Among the prominent exhibits in this room were magnificent blooms of the roses American Beauty and Meteor, from F. R. Pierson, Tarrytown, N. Y., and a large vase of 50 superior flowers of Perle des Jardins, from James Taplin, Maywood, N. J.

The lighter pink variety of American Beauty, pleasantly referred to by some as the "Wyndmoor Winner," was exhibited by John Burton. This is not supposed to be its real name, but when mentioned it is spoken of in that way in order to convey an idea of its merits. This was equally as worthy of being awarded a silver medal or certificate of merit as any of the chrysanthemums which received one of those distinctions. I venture to predict that Mr. Burton's rose will be known and grown and appreciated long after many of the chrysanthemums which have been so favored with a medal or a certificate are numbered with the missing. This is here noted only in the interest of justice.

The general display of cut roses in competition for the society's regular premiums were fully up to what has been shown here before, and in some cases superior. Hugh Graham's were especially noteworthy. He was awarded first premiums as follows: Bride, Catherine Mermet, American Beauty and La France; to John Burton, for Perle des Jardins, Duchess of Albany, Mme. de Watteville, Cusin, and the *sport* above referred to; Joseph Heacock, first for Niphetos, Papa Gontier, Sunset; 2d, American Beauty, Brides, Mermets, Cusins and Souv. de Wootton; this was in the class "any other variety," Mr. Burton's Watteville taking 1st. Charles E. Meehan was second for Perles and Sunsets; John Burton, 2d for La France.

The cut carnations were also in this room—the ladies' reception-room. Thos. Butler took first premiums for pink carnations with Grace Wilder; this was a fine bunch of flowers, of good color and size. Mr. H. E. Chitty was awarded 2d in this class, with the same variety. For scarlets the order was reversed—Mr. Chitty receiving 1st and Mr. Butler 2d. Both lots were Portia. Mr. Chitty carried off the 1st for whites with L. L. Lamborn; also for striped variety with American Flag.



For the "Wentworth prize," donated by Dr. E. H. Williams for the best collection cut blooms, Mr. Chitty was the only competitor. He had a fine lot of all the leading kinds. Mr. J. C. Chambers brought a vase each of his new Grace Darling, a bright, pleasing shade of pink, and Buttercup. Certainly when this old variety comes as it does with Mr. Chambers there is no other in the same line of color to equal it. The flowers were large, of good form and size, and in good color.

It is to be hoped that the Carnation Society will in due time find out why it is that some varieties do well with some people while they are failures with others. Some of our leading horticulturists were at one time successful carnation growers; now they have abandoned their cultivation because with them they are failures. There is a reason for this and it is to be hoped that the cause will be investigated and discovered and a remedy proposed and tested and not found wanting.

There were some seedlings on exhibition from John McGowan, Edwin Lonsdale, J. William Colflesh, Edward Swayne and Isaac Larkin.

The latter had Wanderer, a good white, and Morning Ray, higher in color than Century or Tidal Wave.

Edward Swayne had Aurora (winner of the Ladenburg cup at the New York show); it is a light pink in color and very fragrant; and Pendleton, a darker pink

CUT BLOOMS AT THE BOSTON SHOW.

in color, but a better formed flower, and another, named Thomas Cartledge, is of that darker shade of pink similar to Tidal Wave. I dare not undertake to call those colors by name, besides it is better understood by most florists to compare the colors to well known varieties.

Mr. Colflesh had a very fine new variety which he has distinguished by naming it after his wife. This is pink in color also, but quite distinct from either of the others named. It is darker than Swayne's Aurora, yet it is a pleasing shade and the flowers are larger and spreading. It is likely to become popular. Mrs. Colflesh and Aurora were both awarded certificates of merit.

Mr. A. M. Herr had a good collection on two different days, some fine examples of Golden Gate, Lizzie McGowan, Anna Webb, Ferdinand Marigold, Christmas and some others. What struck me as being remarkable was that varieties like Mangold and Golden Gate, which split their calyx with a good many growers, are perfectly intact in this collection. Mr. Herr expressed himself as believing that the reason of this is because he keeps his plants on the dry side as to water and grows them on a table, under which are steam pipes to furnish bottom heat.

The seedling carnation plants in competition for one of the Wentworth prizes were in such poor condition that the judges refused to notice them. There were two lots in competition, neither of which were considered worthy of mentioning. Mr. John Westcott is emphatic in his declarations that it is the illuminating gas which is at the root of the trouble. The flowers appeared all right when placed in position on the afternoon of the first day, but on the morning of the next when the judges undertook to examine them they appeared as though they wished to take a little nap.

Carnations do not stand well in these large buildings, it appears. It may be that a combination of gas, draughts, etc., will make the holding of an exhibition for carnations only result successfully for no more than one night, unless we find a breed which will stand the pressure.

In addition to the regular premiums awarded specials were awarded as follows: To J. M. Hughes, gardener to Mr. Geo. W. Childs, for a collection of palms and a general collection of fine foliage plants, which were used for decorating the stage. Many of the yellow chrysanthemums were also used in this prominent position, giving it an effective appearance. The same exhibitor was awarded a special for a magnificent specimen of the Latania borbonica, which occupied a prominent place on the floor of the main hall.

As I must make this mail in order to get anything in about the Philadelphia show, I must close at this point and say: "To be continued in our next." L.

Indianapolis, Ind.

As upon former occasions the show was opened by the mayor of the city. In a characteristic speech he dwelt upon the good influences of flower and plant culture upon the people at large. E. G. Hill in response thanked the mayor and the citizens of Indianapolis for their generous hearted support which has been given continuously since our first exhibition five years ago.

Mr. John Thorpe, who is an expert judge, declared that the decoration of the hall was by far the finest and most artistic that he had ever seen for similar purpose; all the visitors, also, were loud in their praise of Mr. Truemper's work. We understand that this gentlemen has been engaged by the World's Fair people to act as decorator for that occasion.

A fair critic of the show would say: Great excellence and superiority were observable in the cut blooms of chrysanthemums, but the plants were far behind former efforts at this place; the show is unquestionably very strong in cut blooms, and quite up to high water mark in the classes for 25 varieties, with three of a kind, and for best 10 blooms one of a kind. In the former class, Bertermann Bros. were first; their collection contained fine examples of Mermaid, E. W. Clark, Kioto, George Bullock, Cullingfordii,

Baronald, Excellent, Mrs. Irving Clark. L. B. Bird, Canning and others. Henry Rieman won 2d in this class; in his entry were fine blooms of Violet Rose, E. G. Hill, Mrs. Langtry, Kioto, T. C. Price, Mermaid and Boehmer. Fred Dorner was third, with splendid blooms of Widener, Bird, Evaline Stein, Emma Dorner, Baronald and Mrs. Irving Clark. It is only fair to say that the above contestants were only a few points apart, and that each of the three exhibits was a triumph of cultural skill.

The Huntington prize for best 10 blooms was won by E. G. Hill by half a point, so close was the race between Gause & Bissell and Hill. The flowers were of unusual size and finish in both collections. The winners were Maud Dean, Flora Hill, Alcazar, Vivand-Morel (this variety was singled out for a certificate of merit), Beacon, Lizzie Cartledge, Atlanta, Etoile de Lyon, Mrs. George Bullock and Widener. Gause & Bissell's were Bird, Kioto, J. V. Farwell, Mrs. Irving Clark, Mrs. M. M. Thomas, Etoile de Lyon, E. G. Hill, Widener, Mermaid, Violet Rose.

M. A. Hunt had a fine exhibit, not for competition, containing charming examples of Evaline Stein, Vivand-Morel, J. C. Vaughan, Mermaid, Sugar Loaf, Beacon, Frank Thomson and Bird.

Pitcher & Manda were out in force with all their latest productions, and made a most interesting display; to be noted specially in their collection were George Savage, a fleecy white; Harry May, Ada McVicker, Mrs. Hicks Arnold, Frank Clinton and Excellent.

Mr. Dorner was first with best 25 of the new introductions of this year; J. C. Vaughan second. Owing to the lateness of the blooming season, neither of the exhibits was as well done as the contestants would have wished.

Bertermann Bros. were first with five blooms of Boehmer, which were fine and very nicely colored.

There were four groups of 100 plants each, grown to a single stem and one flower, which were quite a feature of the show. M. A. Hunt took first with best 100 of all kinds, Mr. Henry Rieman, second. Mr. Hunt had fine specimens of Aug. Swanson, Viviand-Morel, Advance, Waban, Evaline Stein, and Mrs. E. W. Clark; the circles of 100 Widener, by Mr. Hunt, and 100 Mermaid by Dorner, were striking features and were much admired.

In standards the finest and best six were by J. C. Vaughan, who easily took first. These were nicely done and greatly admired.

As on former occasions, Indianapolis was the center of a seedling contest; in fact, the interest in the new varieties outweighed everything else in the minds of the florists present. Mr. John Thorpe was expert judge, and gave great satisfaction to all exhibitors. It is only fair to say that the seedlings exhibited equaled those shown at Madison Square, and not a few thought they would average higher than any lot ever gotten together. Of course, several of the Madison Square varieties were also shown here, and were prize winners on both occasions. The winner of the prize for best seedling was Harry May (Pitcher & Manda). This is a fine, erect, bold flower of light bronze yellow and is in every way a grand sort.

The winner of the $25 prize for best pink was Olga (Henry Rieman). This variety is a fine, well-built flower on stiff stem, full and double to the center, color soft rose with majenta shadings.

The best seedling yellow was Miles A. Wheeler (Nathan Smith & Son); soft, primrose yellow, brightening at the center. It is all that could be desired in form and finish.

The $25 premium for best red was easily won by O. P. Bassett (E. G. Hill & Co.). This is a seedling from Cullingfordii, the exact color of its parent, but quite distinct in size and form.

The $25 premium for best white was won by Mrs. Gov. Fifer (Nathan Smith & Son), a fine, pure white of informal shape; the petals are broad and blade shaped, giving it a fine contour, quite a striking variety and quite distinct from other whites.

The following were certificated as being of great excellence, and were deservedly decorated with the red ribbon. It might be well to mention that these certificated sorts were most carefully judged, and in no case received the ribbon where they were not entirely distinct from and superior to existing sorts; it may also be said that they were extremely close seconds to the prize winners, several losing by only a single point.

The pink varieties were Esther (Fred Dorner), a wonderfully beautiful glowing pink of fine form and finish, destined to be a leader; Spartel (Nathan Smith & Son), delicate rose pink of the Alpheus Hardy type, without any trace of violet or magenta; Harry Balsley (Nathan Smith & Son), a fine pearl pink, almost a pure self pink of very distinct form; Maud Dean (E. G. Hill & Co.), a splendid incurving pink, which was also certificated at Madison Square; Edward Hatch (E. G. Hill & Co.), this variety won the Whitney cup at Madison Square as best pink, but was ruled out at Indianapolis as not being pink, therefore not eligible to compete in the class in which it was entered. Mr. Thorpe said afterward that had it been entered in the sweepstake class it would have won easily, as in his opinion it was the best seedling in the show. It is immense and incurving—a soft lemon suffused with pink.

Red seedlings: Ernest Rieman (Henry Rieman), a fine, bold flower of splendid texture and excellent form; Benj. Schiltgies (H. Rieman); this is another finely formed flower, with stiff, stout stems and ball shaped flowers, brownish red.

Yellow: These were out in force, and were of rare excellence. Ridondo (Nathan Smith & Son), rich bronze yellow of fine incurving form and good substance; color extremely good; Mrs. Maria Simpson (E. G. Hill & Co.), splendid incurving form, broad petals, color chrome yellow; Mrs. Louis Childs Madeira (E. G. Hill & Co.), a splendid golden ball of quill-like petals.

In whites: Mrs. Robert Craig (E. G. Hill & Co.), intermediate between the Chinese and Japanese, a splendid ball of white, certificate at Madison Square and silver medal at Philadelphia; Jaguar (Nathan Smith & Son), a white sport from Mrs. Irving Clark, identical with this grand variety save in color, which will make it a grand acquisition.

Another entry in the seedling class was from John H. Sievers, of San Francisco. Mr. Sievers has a very beautiful collection of Japanese seedlings, though many of them seem identical, or nearly so, with existing sorts. No. 75, or Golden Gate, has every appearance of being a grand sort; it was a little past its best by Thursday, but is a distinct and beautiful thing; No. 83 was greatly admired, especially by the lady visitors; it is an incurving variety of broad, creamy outer petals, with short-petaled whorled center of bright, golden yellow, to our mind the best in the set; the collection made a very beautiful display.

The display of orchids was most interesting, and proved a drawing card. These were furnished by Mr. F. T. McFadden, of Cincinnati, and Siebrecht & Wadley, of New York.

Roses were staged by M. A. Hunt and W. W. Coles, of Kokomo; Mr. Coles had magnificent examples of La France, and Bride, which took first premium, while his Perles were a good second. Mr. Hunt's roses, as usual, were up to the highest standard and as fine a lot of roses as ever were staged, stems stiff and foliage clean. He was first with Niphetos, Sunset, Gontier, Perle, Mermet, American Beauty and Duchess of Albany. Other fine collections were staged by Miss Frick, of Ft. Wayne, and John G. Heinl, of Terre Haute. Strauss & Co., of Washington, sent splendid clusters of Augustine Guinnoisseau (White La France) and Mme. Pierre Guillot. These were greatly admired by the florists present. Mme. Pierre Guillot is a rose of great beauty, and destined to become very popular. The writer also greatly admires a cluster of the White La France.

The carnation display was admirable. Mr. Dorner took first for the best general collection containing many of his later sorts. John Hartje also showed some seedlings of promise. H. E. Chitty sent fine examples of Lizzie McGowan, Lamborn and Tidal Wave. Richard Witterstaeter had the finest examples of Lamborn, Swayne, Buttercup, Mrs. Fischer, and Annie Wiegand, that the writer has ever had the privilege of seeing. E. G. Hill & Co. had vases of all their new varieties, which were greatly admired. Certificates were awarded to Ben Hur, Edna Craig (owned jointly by Robert Craig and E. G. Hill), White Dove and M. A. Hunt; all fine pink novelties except White Dove.

The show promises to be a success financially, as well as in excellence of display. A meeting of the florists was held on Wednesday and Thursday evenings. At the first of these Prof. Joseph Arthur, of Purdue University, gave us a most interesting and instructive lecture on the carnation and its diseases, which was greatly appreciated by all present. E. G. Hill was asked to tell about the Madison Square show, which he did in a twenty minutes' talk.

Thursday night we were entertained by Mr. Thorpe in his usual inimitable way about World's Fair matters in general, and the seedling chrysanthemums in particular. Mr. Thorpe made the broad statement that the world had never seen so fine an array of new seedlings as were gathered there in Tomlinson Hall. He averred that several dozen meritorious seedlings had been set aside which three years ago would have been counted prize winners.

The show was enlivened by one of the finest orchestras in the state, supplemented by the noted cornetist Billstedt, of Cincinnati, who proved a winning card. H.

NOTES.

Probably the largest flower in the show was Ada McVicker, a white from Pitcher & Manda, but it lacks several petals of being fully double.

Among those present from abroad were John Thorpe, B. F. Auger, M. A. Hunt, J. D. Carmody, William Blackman, H. H. Ritter, J. A. Peterson, H. L. Sunderbruch, John G. Heinl, Fred Dorner, S. Humfeld, W. W. Coles, J. S. Stuart, Ed Bissell, Mr. Niedringhaus, J. A. Pettigrew.

Mr. Thorpe's position as expert judge on the seedlings was certainly not one to be envied.

Clara Bertermann, an old gold in color, with very large flower, a sport from John Collins, attracted considerable attention in Bertermann Bros.' exhibit.

Very noticeable among the seedlings was a collection of 30 varieties shown by Henry Rieman, who also captured the lion's share of the plant prizes.

The number of extra good seedlings shown was remarkable, and foretells wonderful things in chrysanthemums in the future if the improvement here shown can be maintained.

In plants the show was not equal to last year's display, growers claiming that premiums offered would not justify the outlay in time and work.

The seedlings were not judged on time, doubtless being held back for recuperation.

Chicago.

It was a beautiful display that was opened to the public Tuesday of last week by the Horticultural Society of Chicago, far in advance of anything of the kind before seen in this city. And in addition to the array of well grown plants and specimen flowers and groups of handsome decorative plants that occupied every foot of floor space not needed for standing room, there hung from the girders overhead and on the face of the balcony such a wealth of laurel wreathing as to turn the great barn-like structure into almost a fitting place for such an exhibition. No less than 2,500 yards of wreathing were used.

The exhibition was opened with an address by Hon. Thos. B. Bryan, vice-president of the World's Columbian Exposition, one of Chicago's most eloquent speakers. In the course of his address Mr. Bryan alluded to the gift of sentiment as one that Americans, above all people, should cherish and said that the love of flowers is closely akin to the purest love for humanity. "Astronomers point out the stars of heaven," he concluded, "but florists cherish the air-woven children of light which form the most beautiful mosaic of our own planet."

It rained dismally all the first day and as a result the attendance was very light, but the three following days the weather was more favorable and the attendance was large, on Wednesday reaching nearly 3,000 paid admissions. All who had attended the three former exhibitions united in saying that while each year had shown a marked improvement the present show was a greater stride in advance than any other one had been.

CHRYSANTHEMUM PLANTS.

The display of plants was most excellent. There was a large number of them; fine taste was shown in the arrangement of the groups and the individual plants were evidence of great skill in cultivation. Never before have such fine plants been exhibited in this city. The principal exhibitors were Messrs. J. C. Vaughan, W. N. Rudd, Frank Leslie and O. P. Bassett, Lincoln Park and Mrs. S. P. Gardner.

Mr. Vaughan's display was decidedly the largest and contained some plants that would be hard to beat. He had the only standards in the hall, and they were so well done as to be one of the most taking features in the plant display. His standard Waban was a grand plant and his group of three standards, three colors, also excited universal admiration. But the plant that captured both amateurs and professionals alike was a splendidly grown plant of Ivory, very dwarf, two feet across and bearing 56 blooms of uniform excellence. It took the blue ribbon for best specimen plant, white, and won in a walk.

Mr. Vaughan captured the majority of the first premiums on plants, taking firsts for six white, 6 yellow, 6 any other color, 6 of this year's introduction, specimen plant white, same yellow, same pink, specimen standard, 3 standards, 50 plants in 6-inch pots grown to single flower and 50 in 6-inch pots, 3 flowers. O. P. Bassett took the seconds in most of these classes. W. N. Rudd was first for 50 plants in 10-inch pots and pushed Mr. Vaughan hard in the class for 50 plants in 6-inch pots grown to single flower. For seedling of this year Frank Leslie was first, Jno. S. Forster second and H. E. Gabel third. Pitcher & Manda were first for specimen plant any other color than noted. In addition to Messrs. Vaughan, Rudd and Bassett, Mrs. S. P. Gardner received several prizes, displaying some plants that would have been formidable had the flowers been more fully developed.

Among the new sorts shown in good condition in the various groups were Mrs. O. Laughton, Pandanus, Beatrice Card, Waban, Mrs. D. D. L. Farson, Rose Queen, Eurus, Mrs. R. J. Baylis, Mrs. R. d'Oyley Carte, Mrs. Senator Hearst, J. C. Vaughan, Mrs A. C. Burpee, Mrs. J. T. Emlen, John Firth, Beacon, Mary Moran, Yoshuke, Penelope, Ernst Asmus, Vivian Morel, Emily Dorner, Gypsy, International, Mrs. John Westcott, Frank Thompson, Mrs. J. G. Whilldin and Target. Mr. Vaughan exhibited a plant of Etoile de Lyon in a 6-inch pot that was very good and V. H. Hallock, shell pink, was very prominent in Mrs. Gardner's groups.

Waban was very much admired and Mr. Thorpe expressed the belief that this will be a very popular variety. He also said that the display of 6-inch pot plants in number of varieties could not be excelled in this country.

The first prize seedling of this year, shown by Frank Leslie, is named Mrs Agnes C. Allerton. It is a distinct coppery yellow, incurved, of large size. Mr. Thorpe considers it one of the most promising new sorts. Other seedlings shown were King's Daughter, by J. C. Vaughan, a very large flower, flat petals of snowy whiteness — certificate; Golden Gate, shown by J. C. Vaughan, a large reflexed flower, rich chrome yellow, double and extremely promising—certificate; W. A. Manda, shown by Pitcher & Manda, golden yellow of the Hardy type, flowers not so double, but petals broader—certificate. Various other seedling of more than ordinary merit were shown, but were not yet considered worthy of certificates.

Pitcher & Manda exhibited an exceedingly well grown and well bloomed plant of John Dyer.

CHRYSANTHEMUM CUT BLOOMS.

In cut blooms Messrs. W. N. Rudd, J. C. Vaughan and Frank Leslie all made grand displays and they each contained some magnificent flowers. Mr. Rudd's Wideners attracted much attention and were a feature of the show. He took first for 100 blooms and 12 blooms and second for general display, Mr. Vaughan taking first for general display and second on 100 blooms, the second and third on 12 blooms going to Frank Leslie and Lake Geneva Floral Co. respectively. Pitcher & Manda also made a fine display of cut blooms on the second day, too late for competition. Among the sorts shown were Miss M. Colgate, a globe of white; Harry May, large orange yellow—certificate; Ada McVicker, large white; Hicks Arnold; Miss Annie Manda, a seedling from Mrs. Alpheus Hardy, of more globular shape, not so hairy, but having a pronounced fragrance—favorable mention; Mrs. W. S. Kimball and George Savage. This display was a very interesting and instructive feature of the exhibition.

On the last day were shown a number of flowers from Mr. John Thorpe's place. Among them was his George W. Childs, a pronounced clear crimson for which he was awarded a first class certificate. In the collection there were a lot of very promising seedlings and the committee made favorable mention of No. 203, a beautiful clear pink; No. 202, a tint approaching what is termed "crushed strawberry"; No. 204, a large full white flower and No. 205, a globular, tooth-petaled white.

Mr. Thorpe was very enthusiastic regarding the flowers exhibited by Mr. Rudd and predicted that he would be heard from in the future as one of the champion growers of fine flowers.

An interesting feature of the display was a collection of chrysanthemum blooms brought in by Senator McDonald of California, from Mrs. Addie Decker, of that state. They came through in very good condition considering the great distance they had travelled, and while not specially fine blooms, they attracted much attention.

CUT FLOWERS.

Mr. W. H. Chadwick had the only display of orchids, but the collection was a very creditable one and the orchids, as usual, attracted a goodly crowd.

The display of roses was not what it should have been. In fact Mr. O. P. Bassett had just about a clean sweep, and but for him this department would have been a complete failure. Mr. W. N. Rudd competed in a few classes and got two firsts, the remainder going to Mr. Bassett, who also won the Chicago Florist Club's special prize for best display of cut roses.

In carnations it was no better, Mr. N. Singler and W. N. Rudd dividing the firsts between them, the Art Floral Co. securing a few seconds. Some very good Lamborns and Lizzie McGowans were shown by H. E. Chitty, Paterson, N. J. The Hill prize of $25 for 25 blooms of any one new carnation was awarded to Robert Craig, Philadelphia, for a vase of the new carnation, Edna Craig, a beautiful pink, in the way of Grace Wilder, but of a lighter shade.

In the general display of cut flowers on the first day O. P. Bassett had no competition, but the manner in which he had arranged his display on a round table made it very effective. M. F. Gallagher took the prize for general display on the third day, also without competition.

FLORAL ARRANGEMENTS.

On the first day F. F. Benthey received the prizes of $40 and $25 for arrangement of orchids in basket and hand bouquet of orchids. The hand bouquet was composed mainly of cypripediums and cattleyas, with a few sprays of odontoglossums and a couple of lycastes. The basket contained pretty much the same sorts, only with a larger proportion of cattleyas. The arrangement was excellent in each case. Though there was no competition the entries were well worthy of the premiums awarded.

There was quite a brisk competition in the class for arrangement of chrysanthemums, any design, on same day. Mr.

Benthey took first, $35, with a large vase formed of white carnations, in which were very loosely and gracefully arranged a collection of superb yellow chrysanthemums, including some magnificent Wideners, well foliaged, the additional green consisting of adiantum ferns. On the base at one side a loose, graceful bunch of bronze chrysanthemums were very effectively placed.

Second prize, $20, went to P. J. Hauswirth for an arrangement of white, pink and yellow chrysanthemums, among hardy ferns, in a large gilded wicker urn.

Third premium, $10, was taken by the Art Floral Co., with a large gondola, very well worked out, but this and other formal arrangements received but scant courtesy from the judges.

There were five entries in the class for table decorations on the second day. The first prize of $50 was won by M. F. Gallagher. His center piece consisted of four handsome bowls of American Beauty roses around a somewhat larger bowl of the same roses, each bowl standing on a small, round, bevel-edged mirror. The arrangement was as graceful as possible while keeping it low enough not to materially obstruct the view across the table and Adiantum Farleyense was very effectively used on the table among the cut glass bowls. At each plate was an oak leaf, upon which was lettered in gilt the name of the guest and tied to each with a small bow of brown ribbon, the same shade as the leaf, a bit of Roman hyacinth or other small flower. But the glory of this table was the china and glassware. The Richelieu hotel had laid out its very choicest and rare indeed it was. The plates were old French ware and are alleged to have cost $125 each. There were seven wine glasses at each of the twelve plates and no two were alike and the color tones of each group harmonized beautifully. Some were heard to criticise the rich display of ware as out of place in a flower show, but from the crowds that continually surrounded the display it must be acknowledged that it was decidedly a drawing card.

The second prize of $30 was taken by F. F. Benthey. His center piece was a combination of four small plateaus of Mme. Pierre Guillot roses, and the effect was charming. The favors were of the same roses. But there was a yellow tint in the ware used that by daylight did not harmonize well with the buff and pink of the rose used, though the effect was very good by gaslight. But for the yellow tinted ware this arrangement would probably have been first, for it possessed one very strong point over the other in that there was absolutely no obstruction of the view across the table, while the arrangement was still graceful, which was more easily accomplished with the rose used than with the bolder American Beauties.

The third prize of $20 went to Joseph Curran. His table was in the form of a triangle with a center piece of same shape composed of Mme. Pierre Guillot roses, crotons and ferns. The favors were of "White La France" roses.

For best arranged $5 box of flowers, flowers used to be of the sorts usually sold over the counter, and the arrangement to give the best possible effect on opening the box, the first prize, $10, was taken by M. F. Gallagher, and the second, $5, by P. J. Hauswirth. Mr. Gallagher also received first, $10, for most artistically arranged vase of flowers, the second prize, $5, going to the Art Floral Co.

On Thursday came the competitions in the basket classes. For basket of roses the Art Floral Co. took the first prize, $20, for an arrangement of Brides and pale Mermets in a basket in the form of a champagne hamper. The arrangement was very loose and effective, the roses apparently flowing to one corner and dripping over the rim there. A bunch of the same roses was very gracefully placed on one end of the open cover of the hamper.

M. F. Gallagher was second in this class with a large handle basket of Duchess of Albany among adiantum ferns.

For basket of flowers, any style, Mr. Gallagher was first with a tall handle basket of mixed roses and adiantum ferns with a bunch of bouvardia in one side and carnations in the other and a bloom of L. Harrisii at one side of the handle. P. J. Hauswirth was second with a large handle basket, one side Brides and the other Duchess of Albany, arranged very gracefully among adiantum ferns.

The competition in mantel decorations took place on the last day. The first prize of $75 was awarded to P. J. Hauswirth by a unanimous vote of the judges, some twenty ballots being cast. But it was an easy matter to decide, for Mr. Hauswirth's mantel stood more than head and shoulders above the other entries. It was a most beautiful creation and was well worthy of the unstinted admiration it evoked. Along the mantel shelf were adiantums, with at one end a perfect plant of Nephrolepis cordata, placed on its side so that the sword-like fronds stood boldly, but not too obtrusively, out, shaded to the mirror at the back by a large foliaged adiantum. At the other end, extended gracefully out over a massive plant of Adiantum gracillimum, several grand sprays of Oncidium ornithorhynchum, the soft rose purple of the mass of tiny flowers harmonizing most gratefully with the varying green tones of the heavily fronded adiantums. At the back was a plant of Dendrobium thyrsiflorum with just one perfect raceme of flowers hanging over the ferns. In the center of the shelf, at the back of the adiantums and rising above them, was a well flowered plant of Cattleya Bowringiana, and from the extreme end of the shelf on one side clambered a single vine of Cissus discolor, most gracefully disposed, while from the other end Asparagus plumosa sprang in a different direction and with an entirely different effect. In the grate a splendid specimen of Ananassa sativa variegata was framed in a group of small palms and similar decorative plants, while a tasteful group of palms, pandanus, draceenas, etc. gave an added finish at each side, the arrangement being sufficiently varied to avoid any appearance of formality. In the group at one side rose from the foliage two blooms of the "Bird of Paradise" flower (Strelitzia Reginæ) that added a surprising touch of richness to the effect. It was certainly the most finished and artistic mantel decoration ever seen in Chicago and that it was thoroughly appreciated was evidenced by the unanimous vote of the twenty ladies that passed judgment upon it.

M. F. Gallagher received the second prize of $50 for a conventional arrangement of roses, chrysanthemums, lilies, carnations, adiantums, etc. The grate filled with red carnations and a group of decorative plants at each side.

MISCELLANEOUS.

Of the McNally prizes for group of decorative plants first went to J. T. Anthony, second to E. Weinhoeber & Co. and third to Albert Fuchs. The Hutchinson prizes for begonias were won, first by O. P. Bassett and second by W. H. Chadwick. Mr. Bassett's group was arranged in the form of a low pyramid and contained a superb collection. The Anthony prize for pair of palms, open to amateurs only, was taken by Mrs. M. Cudahy, while the Samuels prize for pair of palms, open to all, was won by Mr. J. T. Anthony. The Leland Hotel prize for vase filled for outdoor purposes went to Albert Fuchs and the Gallagher prize for fernery filled and the Pitcher & Manda prize for 6 orchid plants in flower were both taken by Mr. W. H. Chadwick.

Mr. Chadwick also received first for 20 ferns, 20 varieties, his group containing some excellent specimens. He also took first for specimen plant other than palm, with a magnificent Adiantum Farleyense. Mr. J. T. Anthony received first for 12 palms in not over 10-inch pots, a very fine collection.

In fruit Klehm's Nursery had a walk-away, taking first in each of the classes for apples, pears and grapes, Mrs. C. R. Williams taking the seconds in the classes for apples.

The judges of plants and cut flowers were Messrs. John Thorpe, Alex. Reed, Samuel Muir, Fred Kanst, Alex. Newett and E. Hobbs. The floral arrangements were judged by 24 ladies selected from the customers of the various florists.

Among the visitors at the exhibition was Mrs. Emily Taplin Royle, who was prior to her marriage New York correspondent for the FLORIST. She had not attended a chrysanthemum show for two years and she made some interesting comments on the progress made by the chrysanthemum in that time. After noting the absence of varieties that had been dropped, those that had been retained and the new ones that had come in, she observed that the tendency was more in the direction of real beauty in the flowers rather than to merely odd or curious forms and colors as had been the case some years back and she commended the wisdom of the growers in striving for beauty rather than for monstrosities.

The daily press was very liberal with complimentary notices, several of the most influential morning papers giving freely illustrated descriptions of the exhibition on their front pages on Wednesday and all giving more or less space each day while the show was in progress. Taken altogether it was decidedly the best and most satisfactory exhibition of plants and flowers ever given in this city.

Washington.

With much of misgiving during its inception as to the final result, the first chrysanthemum show of the Washington Florists' Club has been brought into shape. And now we laugh at our fears, for the large hall of the Light Infantry is full to overflowing of the most creditable sort of stuff.

It must be borne in mind that Washington has never doted on the chrysanthemum like some of her sister cities in the north, and we all feel proud that out of our comparative inexperience we have evolved such good results.

Entering the hall, the first group consists of the combined exhibits of merchantable chrysanthemums, palms, etc., of A. Gude & Bro. and C. Schellhorn; chrysanthemums slightly drawn by their exclusive indoor culture, but flowers very clear and delicate in their colors. Next comes "From the Cradle to the Grave," by N. Studer. Upon a platform slightly separated into sections by a beautifully

decorated framework and edged by stove plants and chrysanthemums in the most tasteful manner, at the upper end, is a rug in red and yellow chrysanthemums creditable in conception and execution, lying before a cradle containing a tiny babe who has received the usual natal floral offerings. Through the doorway one sees a bridal couple richly dressed approaching the altar. Maidenhair ferns, nephrolepis and Marguerites predominate in the decoration of this section. Next comes a richly decorated dinner table, sideboard and chiffonier, richly embellished with roses. Mandarin orange plants appear on top of the sideboard in very good shape. Huge bottles of wine flank a plaque of Beauties, while beer and wine bottles peer out of the floor decorations. A most magnificent pair of candelabra add much to the dinner table effect. From the festive scene to the last section is a vivid contrast. There a grave covered with Selaginella Martensii, headed by a huge block cross, in capes and milkweed balls, a large wreath of Brides and La France, urns of American Beauties and Meteors supplemented by banks of ferns, dracænas and chrysanthemums. There is shown in the whole conception great merit and an appreciative regard of the adage, "Whatever you do do well."

Now we have the competing chrysanthemums in 10-inch pots. Studer first, large plants, but a trifle drawn and consequently loose; good merchantable stuff, but not commanding the admiration of judges. Next comes a group liberally decorated with premium cards. Clark Bros. grew them; plunged plants, only in greenhouse about a month, well furnished and symmetrical. They take the first premium for the best twelve plants; second premium for best six.

C. F. Hale made another of the thorough grown exhibits, excelling in Ivory, showing plants 30 inches in diameter, 15 inches high and a solid mass of flowers. Taking all of Hale's competing exhibit together, I believe no more even and skillfully handled stuff could be found.

A. Gude & Bro. and Robert Bowdler show groups of twelve that are very good. Perhaps if they had disbudded and staked out a little more better results would have been obtained.

The two largest plants of the show come next, exhibited by Studer. Yeddo stands 5 feet high, head 4 feet in diameter; Lilian B. Bird 5 feet high, 3 feet in diameter; very good plants.

Now comes the unique collection exhibited by Philip Gauges. He shows five plants grown as standards. Tyro, with a head 2 feet in diameter, flowers very even and symmetrical, stem clean, 3 feet above pot. The Duchess and Superbiflora compete in spread and effect. Empress of Japan, with more foliage but even flowers, makes a fair standard in white. Mr. Gauges shows a great variety; while his flowers are not large they are uniform in size and clear in color. Bride of Roses and Puritan are good specimens. A plant of Frank Wilcox grafted with Ivory, Mrs. John Petit, Mabel Douglass, Mrs. Wm. Barr, Medusa and Mrs. A. Hardy is a great curiosity.

Edward S. Schmid stages a large assortment of florists' supplies and accessories. The aquariums are extra fine and numerous. Metal wreaths in quantity show that they can't be pooh-poohed down, as has been attempted by some of our critics, for his investments are not made without knowing his market.

J. L. Loose, of Alexandria, stages a magnificent lot of Adiantum Farleyense in from 3-inch to 8-inch pots; grand stuff, indeed. Pandanus utilis is fine, and Adiantum cuneatum in 8-inch, with 3 feet spread, are shown.

J. H. Ley has about the same space in stoves. A good lot of Araucaria excelsa in 5-inch is the only exhibit of that plant. He also has the following novelties: Pteris Smitheana, Dracæna Ducati, Cattleya Waroqueana, Rhapis humilis, Cupania filicifolia, Alocasia imperialis, Pandanus amaryllifolia, and Aralia Kerchoveana.

John Saul shows the only collection of orchids and a fine pitcher plant, Nepenthes Dominiana, attracts much attention. His collection of stoves shows a wide range of sorts in good shape.

Now comes Washington's pets—cut roses. It is almost impossible to particularize, but let me say that a table 60 feet long and 6 feet wide covered with jars of specimen blooms is a sight not soon to be forgotten. Robert Bowdler gets first prize on La France; he is rapidly becoming celebrated for a particular shading of pearly pink to his La France to which the rest of us cannot generally attain. Ed Miller's Perles are grand, but he comes in second on them, and his Bon Silenes are simply magnificent. His Brides capture the first premium. A. Gude & Bro., first on Mermets, and they are Mermets sure enough; second on Watteville, but since Mme Pierre Guillot has appeared we are rapidly losing interest in Watteville. Gude's 100 violets take the first premium. Studer first on American Beauties. George Field & Bro. make a fine show of roses, but do not compete for premiums.

W. H. King shows some grand carnations. In the case of Anna Webb he deserves great credit, as they don't flourish well here generally. He also shows some extra fine Lamborns. Clark & Bro. first on Duchess of Albany and Woottons. Bebus, of New York, first on Watteville and second on American Beauty.

C. F. Hale shows the best twelve cut blooms of chrysanthemums and the best trusses in the show. A. Gude & Bro., best 25 all different and they are certainly fine flowers. W. H. Ernest stages a finely arranged collection of standard pots and cut flower jars which attracts attention by the artistic manner in which it is put up. Alex. Garden shows nice floral work and a general assortment of good flowers.

Pitcher & Manda show a fine lot of cut blooms, mainly novelties. Ada McVicker, a white, noticeable for width and thickness of petals, together with great size of the flower; Miss Annie Manda, very similar to Mrs. Alpheus Hardy; it is to be hoped the latter has been improved upon in manner of growth; Miss M. Colgate, pineapple shaped white, is apparently the pioneer of a new form of "ye mum;" Harry May, in pale orange, is good; W. A. Manda is of novel form, petals drooping from stamens downward; others which are apparently improvements upon old types are good examples of what may be done in that direction. J. R. Morgan & Bro., a firm of young florists, exhibit a very creditable display of merchantable chrysanthemums, and have them tastefully grouped.

The music balcony is staged about and Robert Bowdler has it decorated very tastefully with several wagon loads of chrysanthemums and palms, aided by some large palms belonging to Cadmus. The five huge columns which range through the middle of the large hall are also staged about and decorated in a pyramidal form, 10 feet wide on the floor, with the tops of palms touching the ceiling. To this very artistic work Studer, Clark Bros. and E. Miller contributed excellent material and made very tasteful arrangements. Abundance of chairs are provided, and sitting among bowers our patrons can listen to the strains of the Marine Band and the song of birds.

Much praise and no criticism has greeted our first effort, and we think we have reason to be proud. C.

Buffalo.

Our show opened auspiciously on Thursday. Having engaged the hall for the day before the plants were all in position and everything ready prompt on time for the opening. But the attendance was comparatively light. It seemed as though the 50 cent rate in the afternoon worked to disadvantage.

The daily papers gave good notices, especially the Buffalo *Courier*, whose reports from the able pen of Mr. Miner, formerly in the trade, were very accurate.

Peter Crowe of Utica, N. Y., gave eminent satisfaction generally (barring of course the perennial kickers) on his judging of plants and cut flowers displayed on Thursday. Richard Salter of Rochester acted in same capacity on designs, cut flowers, etc., and his task was not light or easy. A number of exhibitors felt disappointed at the decision arrived at. It's a pity they can't all get first prizes.

The royal blue chrysanthemum which its originator, Prof. J. F. Cowell gives the name of "He-go" was in full display under a glass case, occupying a table by itself. It attracted unlimited attention from the well posted public. It is hoped its projeny may meet with extended distribution in time for World's Fair display.

In the chrysanthemum plant classes Wm. Scott received firsts for 24 in 24 distinct varieties, 24 in any variety, 12 in any variety, 6 in 6 varieties, 6 any variety and 4 white; D. Newlands, for 12 in 12 varieties, 6 yellow and 4 any other color than white or yellow; J. H. Rebstock, for single specimen any variety.

In the other plant classes firsts were awarded to Wm. Scott for 12 geraniums, any variety, 12 carnations in 6 varieties, 6 in 3 varieties, specimen any variety, 12 flowering begonias 4 varieties, 6 in 3 varieties, 12 show leaf varieties, display of orchids in bloom, 12 palms 6 varieties, 6 in 3 varieties, specimen any variety and 6 dracænas in 3 varieties; to J. H. Rebstock for 12 bouvardias 3 varieties, 6 in 3 varieties, specimen any variety, 12 dracænas 4 varieties, specimen any variety, 12 ferns 6 varieties, 6 adiantums, 6 show leaf begonias, 50 stove and greenhouse plants and 25 ditto; to J. F. Cowell for 12 double primulas and 12 single ditto; to D. Newlands for 12 coleus 6 varieties.

In the growers' classes for chrysanthemum cut blooms firsts went to Wm. Scott for best collection 25 named and 12 varieties; to G. Ransom for single specimen; to J. F. Cowell for collection of varieties introduced in 1890 and 1891. The Laing prize for 50 named blooms, any named variety, went 1st to Wm. Scott and 2d to J. H. Rebstock.

In the open to all classes for cut blooms Mr. Scott also took firsts for collection, 25 in 6 varieties, and vase of 12 blooms, Mr. Rebstock winning on single specimen.

In the growers' rose classes firsts were taken by Wm. Scott for American Beauty, Mermet, La France and general display; by J. H. Rebstock for Bride; by Jas. Milley for Perles. In the open to all classes

J. H. Rebstock took firsts for general display and 36 in not less than 3 varieties.

In carnations first prizes were won by Wm. Scott for 100 not less than 4 varieties and 25 not less than 5 varieties. First for display of pansies, not less than 100 blooms, went to A. J. Scott.

In floral arrangements J. H. Rebstock won firsts for handle basket of chrysanthemums, basket any style, hand bouquet, mantel decoration, 24-inch cross and 24-inch pillow; Wm. Scott for any design in chrysanthemums, dinner table center piece, thanksgiving design, 24-inch anchor and standing cross; D. B. Long for lunch table decoration, wedding design, and piece of artistic floral work; Adams & Nolan for bride's bouquet and plateau of chrysanthemums; Palmer & Son for vase of roses; Wm. Belsey for 15-inch wreath.

Among other exhibitors were Geo. Pickelman, Pitcher & Manda, Mrs. Carpenter and Brampton Bell.

Minneapolis, Minn.

Our exhibition opened on Tuesday, the 10th, at noon. The weather was very fine and the attendance has been good. The following were the exhibitors: R. J. Mendenhall, C. A. Smith Floral Co., E. Nagel & Co., Wessling & Hartman, Gust Malmquist, gardener to Hon. W. D. Washburne, J. S. Gray and F. W. Nagel, all of Minneapolis; and Aug. S. Swanson, and L. L. May & Co., of St. Paul; Pitcher & Manda, Short Hills, N. J.; J. C. Vaughan, Chicago. A few seedlings were exhibited. Three of J. C. Vaughan's seedlings, No. 2, No. 4, No. 9, received a certificate of merit. Also No. 1 seedling from the State Reform School and No. 1 of Mendenhall's received certificates. The judges on seedlings were Wm. Hull, James Lowden; judges on plants, and flowers, Prof. Sam B. Green, S. Y. Haines and Franklin Benner.

In the classes for chrysanthemum plants premiums were awarded as follows:

Display of plants, 25 varieties, C. A. Smith Floral Co., 1st diploma and $50; R. J. Mendenhall, 2nd, $50; Wessling & Hartman, 3rd, $30; E. Nagel & Co., 4th, $10. Twelve varieties, C. A. Smith Floral Co., 1st, $25; R. J. Mendenhall, 2nd, $15; E. Nagel & Co., 3rd, $10. Twelve specimen plants, all different kinds, C. A. Smith Floral Co., 1st, $25; Wessling & Hartman, 2nd, $15; R. J. Mendenhall, 3rd, $10. Display of standards, L. L. May & Co., 1st, $25; R. J. Mendenhall, 2nd, $15; Aug. S. Swanson, 3rd, $10; Six specimen plants, all different kinds, C. A. Smith Floral Co., 1st, $25; J. C. Vaughan, 2nd, $15; Wessling & Hartman, 3rd, $10. Single specimen plant, Wessling & Hartman, 1st, $25.

In the classes for chrysanthemum cut blooms, for 25 blooms 25 varieties, C. A. Smith Floral Co. received 1st, $30; R. J. Mendenhall 2d, $25; J. C. Vaughan 3d, $15; Pitcher & Manda 4th, $10. For 12 varieties, one bloom each, R. J. Mendenhall 1st, $15; C. A. Smith 2d, $10; Pitcher & Manda 3d, $5.

Special arrangement of foliage and decorative plants, Gust Malmquist, gardener to Hon. W. D. Washburne, 1st, $25; R. J. Mendenhall 2d, $15; C. A. Smith Floral Co. 3d, $10. Display of blooming plants other than chrysanthemums: E. Nagel & Co. 1st, $25; R. J. Mendenhall 2d, $15; Wessling & Hartman 3d, $10.

Chrysanthemums, design most tastefully arranged: C. A. Smith Floral Co. 1st, diploma and $50; J. S. Gray 2d, $50, Aug. S. Swanson 3d, $30; Hartman & Wessling 4th, $15. Design of miscellaneous flowers, quality, workmanship and flowers to govern: C. A. Smith Floral Co. 1st, $50; R. J. Mendenhall 2d, $30; E. Nagel & Co. 3d, $25; R. Wessling 4th, $15.

Cut roses, 12 blooms of each variety: R. J. Mendenhall 1st, $3 on each of the following varieties: Bride, Beauty, Mermet, Waban; C. A. Smith Floral Co. $5 each on the following: La France, Albany, Bennett, Meteor; R. J. Wessling on Wootton.

Six varieties carnations, 6 blooms of each: C. A. Smith 1st, $15; R. J. Mendenhall 2d, $10; Wessling & Hartman 3d, $5; E. Nagel & Co. 4th, $3.

Premiums offered by Wyman Elliott, president of the State Horticultural Society, in behalf of said society, for six varieties of chrysanthemum plants grown as standards, stems not over 12 inches high and pots not more than 8 inches across: Aug. S. Swanson 1st, $10 and life membership in said society; E. Nagel & Co. 2d, $5 and life membership in said society. Six blooms of chrysanthemums nearest to 12 inches, Pitcher & Manda 1st, $10 and life membership in said society.

Of the other special premiums two were taken by R. J. Mendenhall, three by E. Nagel & Co. and one each by Aug. S. Swanson and Jacob Hartman.

Providence, R. I.

The chrysanthemum exhibition of the R. I. Horticultural Society opened November 12 with splendid weather, a veritable Indian summer, and a fine collection of plants and cut flowers, to which was added a large display of winter fruit. The attendance from the first was of a nature pleasing to the management and evincing the great interest felt in the "Queen of Autumn." During each evening of the exhibition there was an organ recital under the direction of one of Providence's best organists, Prof. Macdougal.

The hall has a large floor space and has one of the best organs in the city. Electric lights lent brilliancy to the occasion and fair women and gallant men filled the hall on each evening.

Chrysanthemum seemed to be the word on every lip mingled with praises of its wonderful beauty and growth.

Exhibitors were present from beyond our state and our own growers were well represented. Messrs. Pitcher & Manda, of Short Hills, N. J., exhibited some beautiful specimens of cut chrysanthemums together with a new seedling, the "Harry May." H. E. Chitty, of Paterson, N. J., exhibited three varieties of pinks, Lizzie McGowan, Lamborn and Tidal Wave. R. T. Lombard, of Wayland, Mass., exhibited the carnation Golden Triumph. Edward Swayne, of Kennett Square, Pa., exhibited his Aurora carnation.

Among Rhode Island exhibitors of chrysanthemums were James Andrews, James Nisbet, Robert Johnston, N. D. Pierce, Jr., Wm. A. Appleton, Jr., Rowland Hazard, Charles Fulford, David Phillips, Wm. Hill, gardener for Mrs. L. P. Shepherd, George McMillan, gardener for R. H. I. Goddard, Alfred Powers, gardener for L. P. I. Goddard, William Hay, Sam W. Lewis, Mrs. R. Jencks, and many others of less note, numbering in all nearly fifty exhibitors.

Of fruit there were 41 exhibitors, making a collection of two hundred plates of fruit.

The chrysanthemum, however, was the chief attraction, and during the days of the exhibition nearly 10,000 persons viewed this really extraordinary collection.

E. I. Nickerson is president of the society and C. W. Smith secretary and treasurer.

The largest exhibitors were James Andrews, who for three years has made large exhibitions, sometimes as many as 400 plants. He was followed in order by R. H. I. Goddard, Robert Johnston, James Nisbet, T. P. I. Goddard, Mrs. T. P. Shepherd, N. D. Pierce, Jr., Wm. A. Appleton, Jr., David Phillips and William Hay.

William Hill, gardener for Mrs. L. P. Shepherd, exhibited a fine specimen of trained standard plant, the Puritan, and Robert Johnston a trained standard of Lilian B. Bird. Messrs. Pitcher & Manda exhibited a new variety the "Harry May," and T. P. I. Goddard the Mrs. D. D. L. Farson.

Among the popular plants we noticed Mrs. Langtry, a beautiful flowering white bloom, W. H. Lincoln, Val d' Andorre, Puritan, Ada Spaulding, Gloriosum, Lilian B. Bird, Mrs. Alpheus Hardy, Empress of India, Lady Spaulding. S.

Newport, R I.

The chrysanthemum exhibition of the Newport Horticultural Society was far ahead of that of last year both in cut blooms and plants. The standards were exceptionally fine and the plants on single stems, of Louis Boehmer, Mrs. W. Barr, Puritan, Mary Wheeler and Charity, were all worthy of special mention. The anemone that took first prize was a beautiful thing. The seedling that received the silver medal was something after the style of Waban, color deep rose, white shading through the center, incurved. It is a grand acquisition, not yet named. It was shown by Richard Gardner, gardener to C. Vanderbilt.

Pitcher & Manda showed their new varieties, Ada McVicker, Harry May, Mrs. E. D. Adams, Annie Manda and W. A. Manda, all very fine.

In the plant classes, Richard Gardner, gardener to C. Vanderbilt, received 6 first premiums, 2 seconds and 2 thirds; Thomas Beattie, gardener to Alfred Tuckerman, received 6 firsts and one second; Alex McLellan, gardener to J. W. Ellis, received 1 first, five seconds and 2 thirds; Wm. C. Russell, foreman for C. Vanderbilt, received 1 first; Gibson Bros., florists, received 2 seconds; Andrew Svenson, gardener to Mrs. Geo. F. Jones, and James Doherty, gardener to J. Van D. Reeves, each received 2 thirds.

In the cut flower classes the premiums were pretty well scatttered. Richard Gardner, gardener to C. Vanderbilt, received 1 first and 1 second; Pitcher & Manda, 1 first and 1 second; W. C. Nichol, gardener to Theodore Davis, Andrew Svenson, gardener to Mrs. Geo. F. Jones, and Andrew Ramsey, gardener to Mrs. Ed. King, each received 1 first; Gibson Bros., florists, 1 first and 1 second; Alex McLellan, gardener to J. W. Ellis, 1 first and 1 second; Chas. Stark, gardener to Mr. Fiske, and James Doherty, gardener to J. Van D. Reeves, each 1 third.

Gibson Bros. received the special prize for basket of chrysanthemums.

New Haven, Conn.

The annual exhibition of the New Haven Chrysanthemum Club opened under very auspicious circumstances November 9. The show in a general way is superior to anything ever before seen in the state.

Among the special features deserving particular mention might be named a plant of Acme, also specimens of Elm City and Faith, all seedlings and raised and

exhibited by Mr. Wm. J. Rowe, of this city. Mr. John H. Slocombe shows magnificent flowers of Lilian B. Bird, Coronet, Mermaid and Belle Hickey that good judges claim were superior to any exhibited in New York.

Robert Veitch & Son exhibited very fine specimen plants of Prelate, Acme and Buttercup, all seedlings originated in New Haven; Buttercup particularly is one of the finest Japanese yellows yet seen and well worthy of general distribution. They also show some beautiful specimens of pot grown coleus, all seedlings, that are very fine.

Mr. Archibald Veitch shows some superb specimens of Mon. Bernard, Ed. Lonsdale, Sunflower and Mme. Prunae; the last is one of the finest soft pink varieties yet seen. Mr. A. N. Pierson shows some beautiful specimen flowers, notably Marvel, Mrs. Langtry and Pres. Harrison, which seems yet to be the finest dark colored sort. C. P. Lines & Co, exhibit a seedling from Thibaut & Keteleer, which, if it should prove to hold the color, will be a decided improvement on the parent.

Among the specially fine new sorts might be mentioned Mrs. Libbie Allen, Mermaid, Eureka, Jamie Rowe, Elliot F. Shepard, Mrs. Burpee and Mrs. Farson, several of them New Haven seedlings, and to the growers of this city great credit should be given. R. V., JR.

Baltimore.

It was a great exhibition, the best we have ever had, and the growers may be proud of their productions. The exhibition opened on Tuesday and has been very largely attended, making it a financial success.

The following were exhibitors and prize takers: L. Huggins, W. Fraser, John Cook, H. Bauer, John Wiedey, Halliday Bros., S. Feast & Son, Wm. McRoberts, Mrs. Mary J. Thomas, John Donn, C. M. Wagner, C. C. Hoffman, Isaac Moss, F. G. Burger, H. Frederick and others, including Pitcher & Manda, Short Hills, N. J.

Judges were secured from Washington and the exhibitors were highly pleased with the way the awards were made by Messrs. W. R. Smith, John Saul, J. R. Freeman and George Field, all from the National Capital City.

The chrysanthemum plants were as a whole unusally fine and a credit to the growers. In the plant classes Halliday Bros. received 5 first premiums, Wm. Fraser 3 firsts and 5 seconds, H. Bauer 3 firsts, 1 second and 2 thirds, John Donn 1 first and 1 second, H. Frederick 1 first and 4 thirds, C. M. Wagner 2 seconds and 3 thirds, J. Beal 1 second.

For collection of cut sprays H. Frederick was first and C. M. Wagner second; for 25 blooms S. Feast & Son first, Halliday Bros. second and J. Wiedey third. For design of chrysanthemums J. Cook was first, J. Wiedey second and H. Frederick third.

For dinner table decoration Halliday Bros. were first and S. Feast & Son second, and for Mantel decoration Halliday Bros. were first, S. Feast & Son second and J. Wiedey third.

In the other classes for floral arrangements Halliday Bros. took firsts for funeral design, wedding design and basket; T. Patterson for table design and hand bouquet; S. Feast & Son for corsage bouquet.

Isaac Moss took first for 6 palms, 1 palm and 25 decorative plants, C. Hess taking second in the last named class.

J. Cook was first for display of roses, J. Beal for 6 begonias and Thomas Patterson for display of carnations.

In orchids Brackenridge & Co. received first for best display and Halliday Bros. for single specimen. H.

Worcester, Mass.

Wednesday and Thursday, Nov. 11 and 12, were the days set apart by the Worcester County Horticultural Society for their eighth annual chrysanthemum exhibition.

The attendance was poor the first day owing to the inclemency of the weather, but Thursday it was all that could be desired.

The hall was arranged nearly the same as last year. The cut flowers were displayed on two large round tables in the center of the hall, each table graced by a specimen areca in the middle. The plants were arranged on terraces along the sides and the stage banked with arecas, kentias, araucarias, etc.

The State Lunatic Hospital, John Nelson gardener, was the largest exhibitor and as usual carried off the cream of the plant prizes. He showed fifty plants which would have been almost perfect if we had not had that hot spell, which caused them to "spindle." Joseph Brierly had an exceptionally good plant of W. H. Lincoln, which was awarded first for specimen plant.

Cut flowers in tall vases were the most popular feature of the show and they certainly were very fine; a vase of Etoile de Lyon shown by Joseph Brierly was given first in this class; State Lunatic Hopital a very close second with a vase of Mrs. A. Hardy. For the best six and twelve Japanese blooms Joseph Brierly received first and State Lunatic Hospital second. Among the best blooms in this class were Robert Crawford, Louis Boehmer, Etoile de Lyon and W. H. Lincoln.

The Chinese blooms were not quite as good as usual; the Japs seem to get all the attention. Six well shaped blooms shown by Mrs. C. E. Brooks secured the first premium.

Pitcher & Manda showed twenty-five magnificent blooms that excited much admiration, among which were Miss Annie Manda, Ada McVicker, Harry May and Shasta.

Edward Swayne exhibited a vase of his new carnation Aurora, which took the Ladenburg cup at New York.

The exhibition was very encouraging to local enthusiasts as a whole, showing that the Autumn Queen is more popular than ever and has come to stay.

ALBERT H. LANGE.

Philadelphia Notes.

Hugh Graham had a fine chrysanthemum show on his own account at his Chestnut street store; in fact it was almost too good to keep the regular exhibition at Horticultural Hall.

Henry A. Dreer had a fine display of bulbs, put up in the excellent style for which that firm is noted.

SEE NEXT issue for exhibition reports not given this week.

St. Louis.

The second annual banquet to florists, nurserymen and gardeners, in accordance with the provision made by the late Henry Shaw, took place at the Mercantile Club the evening of November 10. Covers were laid for 80 guests, on tables handsomely decorated with chrysanthemums.

After the elaborate menu had been discussed to the entire satisfaction of all, toasts were responded to as follows: "Henry Shaw," by Mr. Norman J. Coleman, who was Commissioner of Agriculculture under President Cleveland; "Economic Entomology," by Prof. S. A. Forbes; "What I know of amateur gardening and orchids," by Mr. Charles E. Hay, Springfield, Ill; "Horticultural Literature," by Mr. Edgar Sanders, Chicago; "Weeds," by Mr. James Gurney, head gardener at the Missouri Botanical Gardens; "Chrysanthemum Shows," by W. A. Manda, Short Hills, N. J.; "St. Louis," by Mr. W. S. Chaplin, the newly elected chancellor of Washington University and trustee of the Missouri Botanical Gardens.

Prof. William Trelease, director of the Missouri Botanical Gardens, presided.

All present voted the evening a most enjoyable one.

The directors of the Missouri Botanical Garden will award three scholarships prior to the 1st of April next, in accordance with the intention of the late Henry Shaw in founding the garden, i. e., to provide adequate theoretical and practical instructions for young men desirous of becoming gardeners. One of the scholarships is reserved for the nomination of the Florists' Club, and in case the entire number is not then awarded the remainder will not be awarded until the corresponding period of the following year. Applications must be in the hands of the directors not later than the 1st day of March next.

"Afraid to Tell the Truth."

Referring to your comments on my answer to Mr. Falconer (page 306) permit me to say that the *Rural New Yorker* is indeed being sued for $150,000; for $75,000 by a Long Island florist and seedsman and for $75,000 by a country trading association of this city—both libel suits. The first case was mentioned simply because the prosecutor is a florist and seedsman.

The omission of the word "many" was unintentional. It will appear, however, that the sense is not thereby materially changed.

I heartily agree with you that the "florists of America are a hard-working, honorable people" and that we have all reason "to feel proud of them," as a class. No stronger reason could be given why the black sheep should be fearlessly shown up and summarily dealt with.

E. S. CARMAN.

[The omission of the word "many" did very materially change the sense. With this word omitted, the impression was given that the committee failed to find *any* errors intentionally committed, whereas the report itself tells us in substance that some were found, but only a *very few*. And the committee further told us that where the offender acknowledged his error the matter was left in abeyance until another year should show whether he was sincere or not and if he was not then the case would be brought to public view. As the object of the committee was to *remedy* existing evils rather than to simply make a sensational report, the course they pursued was certainly a wise one and we heartily commend it.—ED.]

WHEN sending out premium lists, mail copies to the secretaries of other organizations giving exhibitions. Each organization should have the benefit of the ideas of all the others.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

New York.

The cut flower trade is very dull at present. The weather has been warm and pleasant and little improvement is looked for in trade until the advent of colder weather. Chrysanthemums show no signs of diminution, but are rather on the increase. The country about here is overwhelmed with them and judging from appearances it will be some time before they are cleaned up. For extra quality blooms the price holds good, however, the best lots bringing from $20 to $25 per 100. An indication of the unseasonable weather was a basket of chrysanthemums on Burns & Raynor's counter, which had been cut from out doors and were of fair quality. Roses have stiffened up again slightly. Quite a number of Harrisii lilies are coming in already. Violets are still inferior in quality and pansies are abundant, of good quality and cheap. Lily of the valley is more plenty and has dropped back to September prices. Smilax is coming in faster than it can be disposed of and prices on it are simply anything which may be offered.

Mr. Albert Benz of Douglaston, L. I., died of pneumonia on Tuesday, Nov. 10., after a few days' sickness, resulting from a cold contracted while attending a yacht club dinner. Mr. Benz was widely known as a pansy fancier and specialist. His place at Douglaston was devoted mainly to the growing of pansy seed, the strain grown having attained an enviable reputation. At certain seasons he grew large quantities of lily of the valley for the New York market. Mr. Benz was one of the most prominent citizens of Douglaston, which he has made his home for some seventeen years. He was postmaster of the town and was very prominent in local secret society work and was also a member of the S. A. F. He came to America from Wurtemburg about eighteen years ago, having been a student in Dr. Lucas' celebrated Pomological Institute at Reutlingen. He was very highly respected by his neighbors and the flower trade about New York or wherever he was known. He is spoken of as a man of strictest honesty and business integrity. He was very active and ambitious in his business and his decease at the age of 38 is a grievous loss to the trade. His death under the present circumstances is particularly sad. His wife died quite suddenly last May and a family of five little ones, one of them a cripple and in feeble health, are now doubly orphaned. Other members of his family also are said to be in failing health, and much sympathy is expressed among those who know the circumstances. He fortunately had been successful in his business and had built up a nice home. The business will be continued through the winter. A handsome floral design was sent to the funeral by the florists and growers frequenting the 34th street market.

The meeting of the Florist Club on November 9 was very slimly attended, most of the regular standbys being in attendance at the Philadelphia chrysanthemum show and supper. Resolutions on the death of Chas. P. Anderson were presented by the committee appointed for that purpose and a copy ordered to be sent to the family of deceased. Arrangements were perfected for having the annual club dinner in January next.

John Burton profited at the auction sale at Rob't B. Young's last Tuesday by the sharp rivalry between Mr. Weir and Mr. Stumpp, both of whom wanted the same pair of palms. Areca lutescens was the variety and they went up to $40 apiece on $5 bids, when Johnnie Weir's backbone gave out and Stummp was the possessor at $41 apiece, which was considered to be considerably above the market value of the plants.

The New York *World* is just now engaged in a commendable agitation of the question of street trees and earnestly advocates the planting of shade trees on all the broader streets in New York City. It is to be hoped that the effort will meet with success and that practical results will follow. Brooklyn is far ahead of New York City in this matter.

A Christening at Boston.

The christening of the new seed ing "P. Welch" is to be held at the Quincy House November 9 at 6 o'clock p. m. You are invited to be present.
S. J COLEMAN, Secretary.

The above is a copy of a missive which found its way into the hands of the faithful, and the unanimity with which they all appeared at the appointed place and time indicated that there had been no doubt in anybody's mind as to the advisability of accepting the invitation. After a social hour in the parlor the party, numbering about fifty, marched arm in arm to the banquet hall, where they found well laden tables awaiting them. Vases of chrysanthemums adorned the board and at the head of the table stood the new born child in its dress of red and gold standing up sturdily with a vigor unlooked for in a child so young.

After the customary onslaught on the good things, Judge Hoitt, as chairman, called the congregation to order and introduced as the parson Pres. Norton of the S. A. F., who he stated had been secured at great expense to the management to perform the ceremony. Mr. Norton, after a mild objection to being taken for a parson, then asked for sponsors for the child and Wm. Edgar and Lawrence Cotter were duly presented as such. "I christen thee, P. Welch, in the name of the gardeners and florists of America," said the parson, and in his zeal he accidentally scattered a goodly portion of the water over the sponsors, who beat a hasty retreat. Great applause followed. Mr. Coleman was then called upon for a statement as to the parentage of the child, to which he replied, naming Cullingfordii and Mrs. Wheeler.

An original poem in honor of the occasion was then read by Judge Hoitt. Copies of the same may be obtained from the judge by duly accredited parties. Lawrence Turley then gave a recitation on the Cannibal Maid and the Hottentot Blade, which was highly appreciated. Speeches followed by Mr. P. Welch, Elijah Wood, W. H. Long, P. Norton, Ed Hatch, J. H. Woodford, E. M. Wood, Frank Becker, Jackson Dawson, L. H. Foster, Warren Ewell and others, with an occasional song by way of variety, Jas. Rough winning all the glory in the latter accomplishment.

It being but two days previous to the proposed assumption by Mr. Welch of the bonds of matrimony, the occasion took on a double significance and the chaffing and sage advice freely bestowed upon him may be more easily imagined than described. Ed Hatch said that P. Welch had privately informed him that this christening at this particular time was intended to do double duty, "so that the boys wouldn't come to the wedding and holler round the church."

The affair terminated at a late hour, much regret being expressed that Mr. Welch would on account of important engagements be unable to attend the bowling match on Wednesday afternoon, but he expressed his inability to attend to two things at once.

THE first annual exhibition and meeting of the American Carnation Society will be held at Buffalo, N. Y., Tuesday, February 16, 1892.

WE HAVE in hand a very interesting article on advertising exhibitions, by G. C. Watson, of Philadelphia, that will appear next week.

WE GIVE in this issue reports of the exhibitions in most of the larger cities, but we have another big batch of reports for next week.

NEXT WEEK we will have Mr. Thorley at the telephone on the subject of novelties in floral arrangements.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser in these columns.

WE SHALL present in next issue a view of the Philadelphia exhibition.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

MR. W. H. MAULE asks what is the best manner to profitably circulate a catalogue. He is undecided whether to give it away or charge 25 cents for it, but rather favors the latter plan. Several other seedsmen are looking for a solution of this question.

MR. W. H. MAULE has just finished enlarged office rooms at an expense of over $1,000. We understand more holes have been cut in the tables where letters are opened and remittances checked, so that the increased business of 1892 may not be delayed.

GRAHAM, EMLEN & PASSMORE, makers of Phila. lawn mowers, Philadelphia, were damaged by fire November 10 to the amount of $10,000. Insured.

PETER HENDERSON & Co. are reported as adding many new engravings for use in their forthcoming "Everything for the Garden."

JAS. VICK'S SONS will use many new electrotypes of a class radically different from the engravings formerly used by Vick.

MR. W. ATLEE BURPEE is recovering the use of his eyes. It is reported that Mr. B. will not long remain a bachelor.

F. C. HUNTINGTON & Co., Indianapolis, have enlarged their warehouse capacity as well as office room.

ROBT. SCOTT & SON will reduce the size of the pages of their catalogue to that of Burpee's.

PRICES on yellow onion sets are no stronger than when last reported.

THE Dixie watermelon is slated for a hard push this season.

Chicago.

W. D. Allen, for many years in the trade in this city, died Nov. 16, aged 68 years.

Among the visitors to the exhibition last week were J. T. Temple and Charles Dannacher, Davenport, Iowa; J. G. Hancock, Grand Haven, Mich.; W. A. Manda, Short Hills, N. J.; W. A. Harkett, Dubuque, Iowa; Messrs. Whitnall, Ellis, Dilger, Edlefsen and others, Milwaukee; W. H. Parkin, Galva, Ill.; A. W. Orr, Ottawa, Ill.; W. Hughes, Hillsdale, Mich.; Walter Helms, Janesville, Wis.; John Wunder, Winona, Minn.

As the time for the regular meeting of the Florist Club came during the exhibition no attempt was made to hold a meeting. There will be considerable business for the meeting next Thursday.

During the exhibition the Horticultural Society received quite a number of new applications for membership. President Chadwick kept a youth busy distributing at the show copies of the constitution and by-laws, with a membership blank in each one, with the above result.

CINCINNATI.—While the "Queen City of the West" will, we are sorry to say, have no chrysanthemum show this year, she will be in the procession next year.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

VAUGHAN'S "CREAM OF THE SHOWS" CHRYSANTHEMUMS

COMPLETE STOCK.

EVERY VARIETY SOLD ON ITS MERITS.

[GREENHOUSES: WESTERN SPRINGS.] J. C. VAUGHAN, Box 688, CHICAGO.

WHY You Should Grow Mushrooms.
Because they are the most profitable crop for the outlay that can be grown and may be grown without interfering with other crops. The market is sure, the supply never having been equal to demand.

WHEN You Should Grow Mushrooms.
During the Winter and Spring months, the first planting in August or September with successional planting until April.

WHERE You Should Grow Mushrooms.
Under the greenhouse benches, on the greenhouse benches among growing crops, in Rose Houses, in frames in the greenhouse, in cellars, stables or outhouses, in the open field or in mushroom houses.

HOW You Should Grow Mushrooms.

First get spawn that will grow. It must be fresh, well spawned, and in good condition. **Gardiner's Celebrated English Mushroom Spawn** is the best, and is always fresh and reliable. The details of culture are given concisely in our treatise, **"Mushrooms for the Million,"** Mailed free. **Falconer's "Mushrooms and How to Grow Them."** Published at $1.50. (Gardiner's price $1 35 post free.) **Robinson's "Mushroom Culture,"** 50 cts. postpaid.

GARDINER'S ENGLISH MUSHROOM SPAWN.
John Gardiner & Co., have made a specialty of choice spawn for years, and their celebrated English brand (made by the best maker in England, specially for their trade), has gained an enviable reputation among critical growers for its uniform good quality, and can be thoroughly relied on to produce a good crop of the best mushrooms. Orders booked now for delivery as wanted, $8.00 per 100 lbs. Special rates to large growers. Address all correspondence to **21 North Thirteenth Street,** Philadelphia, Pa.

JOHN VAN WYCK,

NEW HAMBURG, Duchess Co., N. Y.

Boston.

The annual supper of the Gardeners' and Florists' Club took place on Wednesday November 13 at the Quincy House. Most of the prominent members of the club were present, besides quite a number of invited guests, among whom were Wm. Tricker, E. Dailledouze and J. G. Russell, of New York, Jos. A. Dirwanger, of Portland, Me., J. Cowles and R. Gardiner, of Newport, R. I., Secretary Manning, of the Mass. Hort. Society, H. F. A. Lange, of Worcester, and others. President Morton presided, assisted by Secretary Wood, and Edw. Hatch acted as toastmaster. After the usual preliminary ceremonies of clearing the table of the good things presented speaking and singing were in order, and a most enjoyable evening was spent. Mr. Tricker being called upon to speak for New York took occasion to compliment the Boston growers upon the great exhibition of cut flowers and plants which they had presented. Mr. Dailledouze was next heard from and he agreed with the previous speaker that the quality of the cut flowers shown in Boston was ahead of anything of the kind he had ever seen. Secretary Manning spoke for the Mass. Hort. Society. He referred to the pleasant relations existing between the Hort. Society and the G. and F. Club, and spoke in high commendation of the material and intellectual progress made within the past few years in floricultural matters. Tracing back the history of horticulture he described it as a development of the original pursuit, agriculture, which had now gone a step further and given us another sub-division, floriculture. His remarks were received with appreciative applause. Addresses were also made by Jos. A. Dirwanger, of Portland, H. F. A. Lange, of Worcester, J. G. Russell, New York, L. H. Foster and others. Letters acknowledging receipt of invitations and conveying cordial greetings were read from D. D. L. Farson and H. F. Michell, of Philadelphia, Pres. W. H. Spooner of Mass. Hort. Society, Wm. Fraser, Baltimore, J. McKenna, Montreal, W. R. Smith and Robt. Bowdler, Washington, Jas. Dean, Bay Ridge, N. Y., and other prominent society officials, closing with a characteristic one from Wm. Scott, of Buffalo, which created much merriment. Toasts were drunk to the various Florists' Clubs and to Mr. P. Welch who had gone off on a bridal trip. Songs and recitations were given by various talented members of the club, Jackson Dawson's song "Who can drive a wagon if them horses wouldn't go?" calling forth a merited encore.

A Floral Phantasy.

I am the chrysanthemum
I know I'm yaller,
And sometimes yallerer;
But I am in it
Just the same.
I am aware I'm built
Somewhat
After the pattern of a mop:
But yet
I am an efflorescent epitome
Of the great American spirit
Of git thar.
For I struck this country
A stranger
Without a scent
And no capital
Except my blooming shape,
But I stood straight up
And held my head high
And do yet.
And to-day myself
And my descendants
Are in the floral 400,
And the more
Frills
We develop
The more we're admired.

—*Indianapolis Journal.*

Through a typographical error in Mr. Z. De Forest Ely's advertisement the price of lily of the valley pips was made to read $10 per 100. Mr. Ely writes us that he is willing to furnish ten times that amount for $10 and that the price should have been per 1000 instead of per 100.

KEEP A scrap-book for newspaper notices of your exhibition. It will be mighty interesting later on.

WHEN sending us small amounts in postage stamps, please select those of the 2-cent denomination.

Mention American Florist.

Of course you know how to PROPAGATE PLANTS, but do you know ALL about it? Our new book "THE NURSERY BOOK," is not about human babies, but does tell all about baby plants, how to propagate OVER 2,000 varieties of them. It is a compilation from the practice of the most skillful propagators in the world. It has over 100 illustrations. Over 300 pages. Price, in cloth covers, wide margins, $1.00; paper, narrow margins, 50 cents.

Transatlantic Wit.

The sleeping room in the bothy was a long, narrow apartment, with the nine beds arranged regularly along one side. A big brown rat had been annoying the boys by his nightly visits, and although many a boot and other missile had been flung at him, he always managed to escape. Finally a concerted plan of campaign was agreed upon which, to make a long story short, resulted in the rat being shut into the room with no means of egress, and the whole crowd of boys in hot chase after him. Jimmie M. was the owner of a tall hat, of which he was very proud, and which he had carefully stowed away in a hat-box under his bed. When the scramble began Jimmie's first thought was for his beloved hat, and he made a dive under the bed to secure it. Bill B., with mind entirely on the rat, seeing Jimmie's brown head appearing suddenly from under the other side of the bed, brought a long-legged boot down upon it with a terrible whack. Poor Jimmie was nearly killed, but they finally succeeded in bringing him to. "I hope ye're no mad at me, Jimmie?" says Bill, with a crestfallen look. "I'm no mad at ye," says Jimmie, "but it almost braks me heart that ye would tak me head for a bluddy old rat."

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

SEE NEXT ISSUE for exhibition reports not given this week.

Chrysanthemum Shows.

Toronto.

The chrysanthemum show of 1891 is now a thing of the past, and I am glad to say that the club can look back to it with satisfaction. As a financial success the show does not shine, although considering the circumstances there is nothing to complain about (I think I mentioned before that the club had been under the necessity of buying out another society who had engaged the Pavilion before us for the Thursday evening), but as an exhibition of chrysanthemum plants and blooms it could not be beaten on this continent as to quality. As to size, of course I must give in on that point. This may seem to many of your readers like "blowing" a little too much, but I have the opinions of many expert but disinterested persons that I speak truly.

Fifteen members of the club judged the plants and blooms, giving 3 points to the best entry, 2 to the 2d best, and 1 to the 3d best, and this method, though certainly rather difficult and clumsy to handle, has given almost universal satisfaction to everyone, and the book wherein the judgments of the fifteen were copied is a very interesting book. For instance: In the section for a specimen bloom, white, the two best blooms were Mrs. A. Hardy and L. Canning, and the competition between these two was so keen that Mrs. Hardy got 25 points and L. Canning 24 points; now would not there have been some dissatisfaction if a single judge had judged them? They were both perfect flowers of their sort.

The stall for the sale of cut flowers did a large business under the able management of Mr. Charles Arnold and made the amount of receipts considerably larger. The first two evenings were unfortunately wet, but Thanksgiving day was a "daisy," and brought out a big crowd.

Some grand blooms of Mrs. A. Hardy were put up by Mr. R. Mearns, florist, and Mr. G. Vair, gardener to Sir D. S. McPherson. Mr. Mearns also took first prize with some blooms which could hardly be surpassed anywhere of Molly Bawn, Kioto, Dawn, etc. Mr. J. Spring, gardener to D. Hoskin, also exhibited some of the finest blooms in the show of L. Canning, Mrs. G. Thompson, Etoile de Lyon and others. Amongst the finest of Mr. Vair's blooms, many of which were in 1st prize collections, were E. Molyneaux, Gold, Mrs. F. Thompson, H. E. Widener, G. F. Moseman, Robert Bottomley, etc. In the specimen yellow Mr. Mearns took 1st with Kioto, perfect in all respects. In the specimen pink Mr. Spring carried off 1st with an immense Etoile de Lyon, a beauty.

Amongst the plants, Mr. Mearns took 1st in the 25 distinct varieties section with a lot of plants that the judges had no difficulty in coming to a decision about. Amongst them were Ada Spaulding, Mrs. Wheeler, Mrs. Hardy, etc., every plant and every flower a specimen. In the 12 distinct varieties, Mr. A. McPherson, gardener to Col. Sweeney, took 1st with a very fine lot, Mr. Mearns 2d.

Of pompons the show was meagre. Why is this class not grown more? What can be prettier for store or market than well-grown little plants of this class?

In standards, Mr. George Vair took 1st in all sections, with some very fine plants.

In 6 whites, 6 yellows and 6 any other color, competition was keen all round, Mr. Mearns and Col. Sweeney carrying off the 1sts.

In new plants of 1891, Mr. W. J. Laing took the 1st for 6 plants and Mr. Spring 1st for 3 plants.

Col. Sweeney took 1st and silver medal for 25 plants in 6-inch pots; Mr. Spring 1sts for 25 plants with single stem, single flowers, in both 6 and 8-inch pots; Mr. R. Mearns, 1st for bank 15x6 feet, and Mr. George Vair 2d in same class.

Designs, baskets and dinner table pieces were well represented, Messrs. Tidy & Son, Charles Arnold, Manton Bros., Grainger Bros., W. J. Laing and A. Westwood being the chief exhibitors.

Mr. H. Dale, J. H. Dunlop, and Spears & Muston showed carnations, the former taking four 1sts in this class; there was not a large exhibit, though.

The show of roses was simply immense. New York or other cities would not have been it it—J. H. Dunlop coming out ahead in most sections, Mr. H. Dale and Spears & Muston close behind. Of course J. H. Dunlop's new rose "Toronto" was there, and attracted lots of attention. Manton Bros. took 1sts for bunches of both double and single violets.

I must not forget to mention the chrysanthemum blooms sent by our American brothers, Messrs. Nathan Smith & Son, Adrian, Mich.; John N. May, Summit, N. J.; E. G. Hill, Richmond, Ind. and Pitcher & Manda, Short Hills, N. J. (the latter, unfortunately, not being received in time to be placed in competition). There were blooms of many varieties not yet grown here which the growers were especially glad to see, amongst which I mention one from Pitcher & Manda, Ada McVicker. The combined American exhibit was very attractive and received much attention. But I am sure the other gentlemen will not take it amiss and give up sending blooms to Toronto when I say that our own blooms were as fine, and in many cases finer, than theirs, because, as I said before, we were glad to see other varieties than are grown here, the names of which have been put down in many note-books for reference when the time comes for giving orders.

Many florists outside Toronto came in on purpose to visit this show. Amongst

the many were Messrs. C. Morris, W. Pockett, D. Denton, of Cobourg; Mrs. Janzen, of Berlin; Messrs. Townsend, F. G. Foster, E. G. Brown and S. Aylett, of Hamilton.

It was really amusing to stand at the door and watch the effect of the hall on some people, who had not the slightest idea that a chrysanthemum show could be made anything like so grand, and really the progress made since last year was simply marvellous. We thought we had a good show last year, but it was "not in it" compared with this. I overheard several comparisons between this show and those of Madison Square and Temple Gardens, London, and the opinion was that the quality of bloom was quite equal to that shown at those exhibitions.

Trade is brightening up considerably this last week, and I hear very few complaints. Chrysanthemums are coming at a lively rate, but do not stick.

The annual meeting of the Gardeners' and Florists' Club for the election of officers had to be postponed on account of the show, and will now take place on Wednesday, the 25th inst. There are lots of nominations—five for president, I believe—so that there will be a lively time. A little bird tells me that John H. Dunlop will be president for the coming year, but "nous verrons" I will tell you in my next. E.

Philadelphia.

[CONTINUED.]

In the class for ten plants in pots, ten varieties, James Vernor, gardener to A. J. Drexel, was an easy first. This makes the third time in succession that Mr. Vernor has captured this coveted prize. His plants bore evidences of the patient skill which has been bestowed upon them for months past, and he richly deserves all he gets. Conspicuous in this collection were such good sorts as Puritan, Lilian B. Bird, President Harrison, W. H. Lincoln and Miss Mary Wheeler. Second premium in this class was secured by J. Wm. Colflesh. Among his collection were Violet Rose, Mrs. Bullock and Mrs. F. Thomson. Third went to John McCleary, gardener to William Weightman, Esq.

Mr. Thomas Lang's (also gardener to A. J. Drexel) collection of foliage plants were a treat to see, so clean and full of vigor. A variegated pine apple in fruit attracted as much attention as anything from the general public.

The veteran, William Joyce, was out in force with his well cared for pets. For thirty years has Mr. Joyce contributed to the success of the famous displays of decorative plants at the exhibitions held by the Pennsylvania Horticultural Society. An example is set by this illustrious plant lover for all men to follow. Under adverse conditions his success is remarkable, as his plants are grown right in the heart of the city.

Mr. C. D. Ball also had some fine examples of good culture in his collection of ferns and palms. Mr. Ball's plan of labeling is commendable; the card used is oval in shape and mounted on neat sticks about the line of vision. This beats groveling around the base of a plant to find only too often a wooden label with the name obliterated.

The management of exhibitions should insist upon a uniform label being adopted. Better still the managers should furnish labels to all exhibitors.

There is a rule in all well regulated societies and clubs that all entries for exhibition shall be made at least one week before the time for opening the show. And a request that a list of the names of the plants shall form a part of that entry. If both these rules were complied with by exhibitors how much better it would be for the hard worked secretary, chairman of the committee of arrangements, superintendent of exhibitions and the committee on publication or advertising. The secretary could have all the names neatly printed on labels unvarying in appearance, the chairman of the committee of arrangements could tell to a nicety how much space would be required, the superintendent could study out the effects to be produced, and last, but by no means least, the advertising could be more intelligently conducted, advance notices could be prepared with more convincing spirit and a more successful exhibition would be the result.

It takes more courage than most men can muster to refuse to take an entry or an exhibit when it comes in at the eleventh hour. Many come in even later than that. There is a feeling prevalent that we cannot afford to offend an exhibitor. If an exhibitor could only be made to realize how his *little* exhibit (as he is apt to call it at this stage of the proceedings) causes confusion and makes it sometimes necessary to rearrange the plans already being carried out, he would we feel sure be more reasonable.

The cut blooms were superior to those of last year, taking them as a whole, and the new varieties showed up well.

The premium of $50 offered by T. H. Spaulding for best six American seedlings, not less than three nor more than six blooms of each, brought out Pitcher & Manda & Hugh Graham; the latter exhibitor carried off the prize. Roselyn, a delicate incurved pink of large size, showed up well here. The society awarded this one a silver medal. Marguerite, a beautiful white incurved; this was exhibited under the name of Marguerite Graham in New York if I am not mistaken. The abbreviation of names is to be commended so that it is done before the variety is disseminated and in this case it is so.

Logan is double incurved, distinctly and regularly striped pink and white.

Mrs. J. D. Eisele is similar in color to Source d'Or, but the flower is much larger and more graceful in form. This is said to be an early sort. Mrs. Robert C. Ogden is a large flower of a light purple shade of color. The last two are seedlings raised by Fred R. Sykes, gardener to Mrs. Harry Ingersoll. The Rev. J. C. Hanna is reflexed in form, of good size, light purple in color, shading to pure white at tips of the florets.

In Pitcher & Manda's lot were Ada McVicker, which loomed up in good shape. If it were only full to the center it would be one of the best of the year. Annie Manda, similar to Mrs. Alpheus Hardy as to the hairiness of the florets, but it has a much stiffer stem and the bloom is better built than Hardy—not so flat. Harry May attracts attention wherever seen. Many of the best varieties were on exhibition at the Madison Square Garden and were noticed and described in your report of that exhibition.

Certificates of merit were awarded as follows: Harry May (Pitcher & Manda), Annie Manda (P. & M.), Mrs. Robert G. Ogden (Hugh Graham), Charles J. Osborn (Spaulding), J. M. Schley (Spaulding). Robert Craig's and Hill & Co.'s exhibits were so close together and mixed that it was difficult to tell which from which. In the two collections the following were honored by a certificate of merit: O. P. Bassett, Maria Simpson, Maud Dean; and silver medals as follows: Mrs. L. C. Madeira and Mrs. Robert Craig; to H. Graham for Roselyn; to Thos. H. Spaulding for Emily Ladenburg (a cup winner in New York); to Peter Henderson & Co., for Golden Wedding (this is a very distinguished looking variety); and to Good Gracious, similar in form to Kioto, but a delicate pink in color. A certificate went to Henderson's Wm. Falconer. It is a *sport* from Louis Boehmer, to which it is similar excepting in color, a lighter and more pleasing shade. We may look for other sports in this line, as C. W. Ward reports having one which according to the description is identical with Wm. Falconer.

Some years ago a variety was sent out I think by Hallock & Thorpe, under this name, but as it seems to have gone out of cultivation little or no confusion will result. There are so many seedlings and sports nowadays that the disseminators apparently find it difficult to select good names that have not already been or now are in use.

If the public bought only those varieties which have won cups, medals or certificates, and cups, medals and certificates were only awarded to those where not less than twelve blooms were shown, it would have a tendency to lessen the number of names. Something will soon have to be done. One close observer says it is one of those evils which sooner or later will correct itself.

Henry B. Surman had a promising seedling plant in bloom, a yellow in color and quite large in size. I think this won the Blanc prize, though I am not sure about it, as Mr. Surman's seedlings were exhibited under number. It certainly, as seen here, was worthy of a name. Names should in all cases be attached to seedlings worthy of being exhibited. The trouble is that originators can generally see a good deal more in a variety of their own production than anybody else can and that is the reason why so many inferior seedlings find their way into an exhibition hall.

Mr. Surman has raised some of the best varieties that we now have. Mrs. E. W. Clark was one of his first and Minnie Wanamaker and Mrs. Madeira are his. His seedlings were all named at the show in '90—and at least one name was changed after it had changed hands a few times, and this may account for his reticence in naming his productions this year. It does lead to confusion if a seedling is awarded a certificate of merit or a medal under a name and when disseminated by some other person than the originator the name is made to read something different, it is not quite right; it is unjustifiable.

In the dinner table decoration Pennock Bros. were first, Joseph Kift & Son second and J. Wolf third. Pennock Bros. used orchids quite freely and the wisdom of their action was apparent from the first and as the week wore on it was more apparent still, for they made a very creditable display to the last.

Cut flowers ought to be renewed every day whenever necessary. It makes a good deal of work, but in order to have a creditable flower show there must be no faded flowers at any time.

I cannot say all that should be said even in this issue. L.

Montreal.

The exhibition held on the 11th and 12th was the best ever seen here, but the attendance was not as good as could be, the weather undoubtedly having a lot to do with it, as it rained both days. Fine

VIEW AT THE PHILADELPHIA CHRYSANTHEMUM SHOW.

weather both before and after the show made us think we had hard luck. The committee had advertised a deal more than before and the Buffalo "Posters" were the admiration of all.

There was a great deal of interest in the show, as two cups were to be competed for and it was generally expected that some growers from the other side of the line would send along some flowers to compete in the cut bloom section. None came, however, though Messrs. Pitcher & Manda staged a fine lot of blooms for exhibition only. The best among them were Harry May (very fine), Mrs. Hicks Arnold, Miss Ada McVicker, Mrs. W. S. Kimball, W. A. Manda, W. W. Lunt, Geo. Savage, Mrs. Mercer, Crystal Wave, Col. H. M. Boies, Mrs. J. Eyermann and Miss Annie Manda (Mrs. Hardy type). These varieties were nearly all new here and attracted a lot of attention.

There were only two competitors for the best 24 blooms, but there were some very fine flowers shown. J. Bland (who was awarded first prize) had in his two dozen, very fine flowers of Mrs. J. N. Gerard, Kioto, L. B. Bird, Domination, Ada Spaulding, Christmas Eve (extra good), Violet Rose, Gloriosum and a remarkably fine Compte de Germiny, which was full to the center with petals. Wilshire Bros., who were second, had fine flowers of Mrs. B. Harrison, W. H. Lincoln, Duchess of Connaught, Mrs. A. Hardy, Phœbus and Mrs. J. N. Gerard. In the best 12 many of the above varieties were exhibited, in addition to which were some flowers of Clara Rieman, H. E. Widener, Mrs. I. Clarke and Mrs. J. T. Emlen.

The most prominent varieties among the plants were W. H. Lincoln and L. Canning. Good varieties noticed in the groups were C. de Montbrier, E. Audiguier, Mme. Barry, E. Molyneaux, T. S. Ware, Sunflower and Lady Margaret. The plants were as a rule poor this year, most of them having "gone blind," the flowers on them being only side flowers.

There were four groups of decorative plants. The first prize group contained some fine plants with a good lot of orchids in it, but was badly arranged, being massed together. Arrangement for effect ought to form one of the most important points in a group of that class of plants. Several specimen palms added greatly to the appearance of the hall, as also did three mantels decorated. These attracted considerable notice, as they were the first seen here.

Roses were conspicuous by their absence, none being shown for competition. Some very good carnations were exhibited, first being awarded to Tidal Wave for pink, Silver Spray for white and Garfield for red. The best collection contained the following varieties: Tidal Wave, Garfield, Portia, Gertie, Golden Gate, L. L. Lamborn, Grace Wilder, Crimson King and Snowdon. The 12 Lamborns shown in the collection were undoubtedly the best 12 whites shown.

On Thursday evening considerable amusement was caused by someone placing a sketch of the two cup winners in boxing attitude inside the glass case that contained the cups.

The judges were: On chrysanthemum plants, H. A. Bunyard, Geo. Trussell, T. Lawton; miscellaneous, J. Stanford, W. Whiting, D. Williamson; cut blooms, C. Scrim, J. Walsh, G. McAnulty.

In the chrysanthemum plant classes J. Kirkwood received first premiums for 12 plants, 6 plants, 3 plants, 3 standards, specimen standard and specimen not a standard; G. Copeland for best display on a space of 60 feet and A. Pinoteau for best display on space of 25 feet. Of the second premiums in these classes four were awarded to J. Eddy, two to J. Bland and one each to G. Copeland and B. T. Baud.

In chrysanthemum cut blooms J. Bland took first in each of the classes, viz., 24 blooms, 12, 6 and 3 blooms, distinct varieties. The seconds went to Wilshire Bros., J. Bennett, S. Kirkwood and J. Kirkwood respectively.

For group of decorative plants W. Wilshire was first, J. Betrix second, J. Walsh third and J Bennett fourth. For eighteen miscellaneous plants, 1st Walter Ward, 2d J. Betrix, 3d J. Horseman. Six specimen ferns, 1st J. Walsh. Specimen palm, 1st J. Bland, 2d W. Ward, 3d J. Dunbar. Mantel decoration, 1st J. Bennett, 2d C. Campbell, 3d Wilshire Bros.

In carnations J. Bennett received first for best collection, best 12 white and best

12 red, P. McKenna & Son taking first for best 12 pink, also second for collection and 12 white. Seconds were also taken by A. Pinoteau and J. Bennett, the thirds in the last three classes going to C. Campbell. W.

St. Louis.

The flower show opened Wednesday night at 5 o'clock to a very fair attendance, the large Music Hall being comfortably filled. Although the largest hall in the city, the florists in their first effort of the kind filled every available foot of space. All the prizes were well competed for, and the judges on plants alone had about 10 hours' work in making awards. They were Julius Koenig and Robert Tesson. Mr. D. S. Brown should have served but his illness prevented. A very notable display was that of Mr. D. S. Brown, who exhibited a large collection of beautiful specimens of araucarias, orchids and nepenthes. On Thursday night were displayed cut blooms of chrysanthemums, round-handle baskets and table decorations. On this night also were judged the seedling chrysanthemums, competing for the $50 prize of the Shaw estate, the committee making this award being composed of Mr. Harry Rieman and Miss Bertha Riessen, cut flower judges, and Messrs. Julius Koenig and Joseph Heinl, the latter of Jacksonville, Ill., plant judges, the award being made in favor of Pitcher & Manda's seedling, Mrs. E. D. Adams, a plant which had attracted much attention throughout the show because of its compact habit and profusion of flowers. On Friday night cut roses, table decorations of chrysanthemums, and oval plateau baskets were exhibited.

As to the success of the show as a whole, may it suffice to say that in two days and three evenings, half the door receipts, which was all the club received, were sufficient to pay their expenses and their premiums. Had we anticipated such liberal support from the public the show would have been made to extend over a longer period than two days, and would have become a source of revenue. However, a feeling of satisfaction prevails, for we have the assurance now, having given a successful exhibition, that our future efforts will be liberally supported.

C. Young & Sons captured a majority of the first premiums in the chrysanthemum plant classes, taking 1sts for 12, 6, 4 white, 4 yellow, 4 pink, 4 any other color, specimen white, specimen yellow, specimen pink, and 12 in 12 sorts, two of each. Firsts for specimen any color and for group not exceeding 25 plants were won by Harry Leeds. Of the other premiums Wm. Schray received 3 2ds and 5 3ds, J. M. Jordan 2 2ds and 2 3ds, Jno. Ormsby 2 2ds, C. Young & Sons 2 2ds, F. J. Fillmore and E. A. Michel each 1 2d, E. H. Michel 4 3ds, J. Steidle 1 3d.

In standards 1st prizes went to J. C. Vaughan for specimen white, specimen yellow, specimen pink and specimen any other color, John Steidle taking 1st for 6 standards in 6 sorts. All the 2ds went to William Schray and all the 3ds to J. M. Jordan.

In plants grown to single flower, A. Meyer was 1st for 18 in 6 sorts and 12 pink in 4 sorts; C. Young & Sons, for 12 white in 4 sorts and 12 yellow in 4 sorts; John Ormsby, for 50 plants not more than 2 of any one variety. Wm. Schray and C. Young & Sons won the seconds in the first four classes.

The award for best seedling went to Pitcher & Manda, as noted.

For largest and best collection of orchids, Wm. Schray was 1st, Elleard Floral Co. 2d, and Pitcher & Manda 3d.

In decorative plants first premiums were awarded to John Ormsby for largest and best collection of named palms; to C. Young & Sons, for largest collection of named dracænas; to E. H. Michel, for specimen palm; to J. M. Jordan, for specimen Areca lutescens and specimen Kentia Forsteriana; to A. Waldbart for specimen Phœnix reclinata, specimen Pandanus utilis, and specimen decorative plant other than those named; to Elleard Floral Co., for specimen Cycas revoluta; to Wm. Schray, for specimen Araucaria excelsa; to E. A. Michel, for Pandanus Veitchii.

In chrysanthemum cut blooms, first premiums were awarded to Fred Dorner for 45 flowers in 15 sorts; to Wm. Ellison, for 12 white, 12 yellow, 12 pink, each in 4 sorts, and 12 blooms one of a kind; to C. Young & Sons, for 36 flowers in 12 sorts, exclusive of pink, white, or yellow. The seconds were divided between Wm. Schray and C. Young & Sons. The special prizes for largest single bloom by a St. Louis grower went: 1st to Harry Leeds, 2d to C. Young & Sons, and 3d to R. Tesson.

For 10 varieties carnations, 25 of a kind, Elleard Floral Co. was 1st. For handle basket, Wm. Ellison was 1st, Ostertag Bros. 2d, and J. M. Jordan 3d. In the table decoration contest C. Young & Sons were 1st, Ostertag Bros. 2d, and Wm. Ellison 3d. For flat, oval basket, C. Young & Sons were 1st, Ostertag Bros. 2d, and Wm. Ellison 3d, and for table decoration of chrysanthemums, Wm. Ellison was 1st, C. Young & Sons 2d, and Ostertag Bros. 3d.

In cut roses R. Tesson was 1st for Duchess of Albany, Perle, Bride, American Beauty, Mermet, Hoste, and Wootton; C. Young & Sons for Niphetos, Bennett, and Watteville; F. J. Fillmore for Gontier and La France; Brown & Canfield, for 10 varieties, 3 of a kind.

Syracuse, N. Y.

The third annual chrysanthemum show proved a decided success in every particular; the public showed its appreciation of the efforts of the society. It is safe to say that the plants and flowers staged this year are far in advance of any previous show. A new departure this year was the arranging of the plants on the floor in groups, thus doing away with the straight staging plan, and each day some change was made in the grouping, which proved highly satisfactory. Messrs. P. R. Quinlan & Co. made a most beautiful exhibit with their plants and flowers and were awarded seven first prizes. Their plants were the finest ever seen in this part of the state; one plant, W. H. Lincoln, had over 400 flowers and measured nearly six feet in diameter. Among their many good things were the following: Louis Boehmer, Atlanta, Roballion, Mrs. Dr. Bridgman, Lilian B. Bird, Mrs. Irving Clark, Flora Fewkes. This firm had also a most artistically arranged stand of cut blooms of chrysanthemums and roses. Of the former many magnificent specimens of the newest varieties were shown. The roses were also very fine, especially the American Beauty. First prize for 24s were awarded.

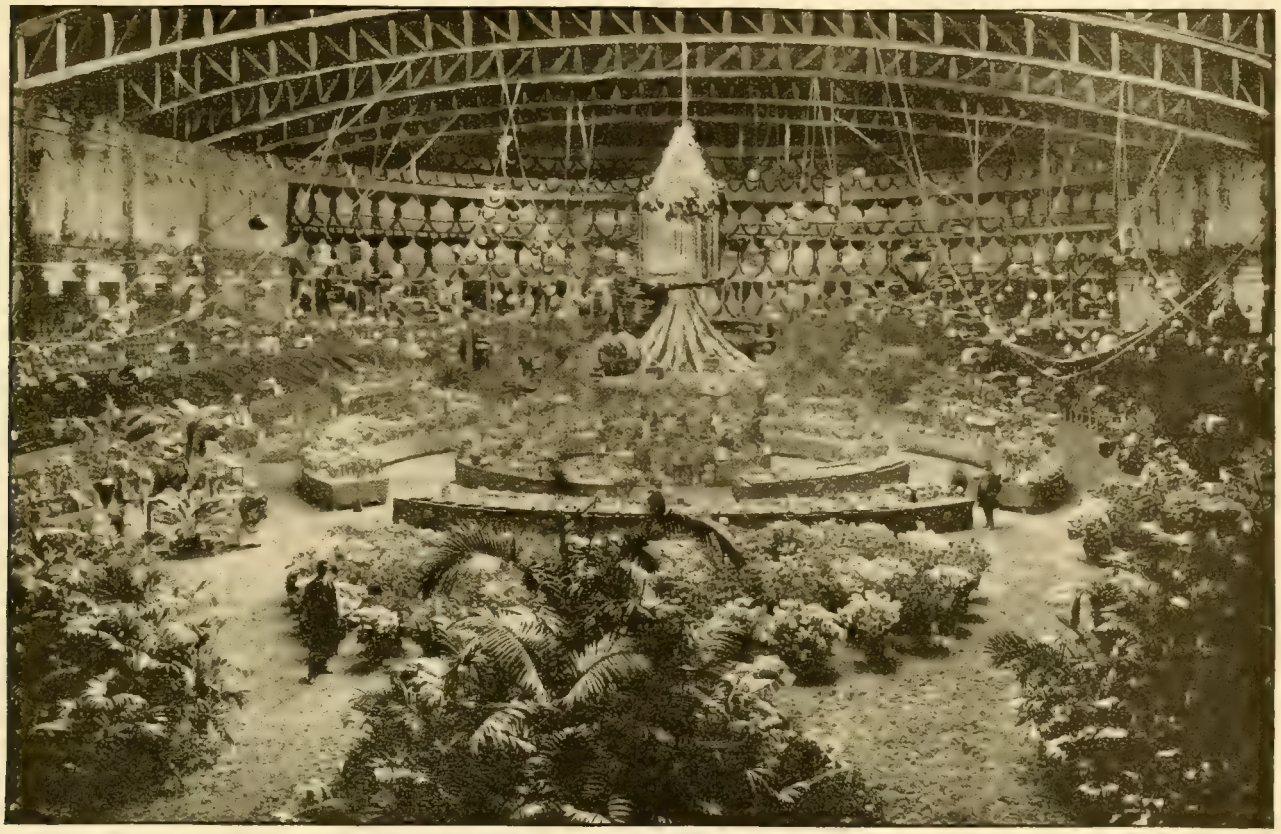
In the gardener's class, G. Ham, gardener at the state asylum, was awarded 8 first and 6 second prizes in the various classes. His plants were excellent and it is a wonder how he could turn out so many good things with the limited space at his command. He showed fine specimens of J. C. Vaughan, Lilian B. Bird, F. Wilcox, Kioto and Mrs. Alpheus Hardy.

Peter Kay, gardener to Congressman J. J. Belden, captured 7 first and 2 second prizes. His plants were remarkably fine; among them were grand specimens of Belle Hickey, Ada Spaulding, J. J. B., a magnificent seedling, Cullingfordii and many other fine varieties.

W. Meneilly, gardener to Hamilton S. White, also exhibited in three classes with some fine plants.

J. Hullar, one of our enthusiastic amateurs, showed some remarkably fine plants and was awarded 5 first and 2 second prizes. Among his many good things were Mrs. Andrew Carnegie, Ada Spaulding Moonflower, Kioto, Louis Boehmer, J. C. Vaughan, Pandanus.

W. Clark, florist, had a nice group of plants which received second prize. Messrs. Pitcher & Manda had a grand display of cut flowers which carried off the special prize of $20 offered by Mayor Davis. Their flowers were one of the features of the show. Their seedling Annie Manda was universally admired; it is a beauty. Among others were Mrs. Grace Hill, Advance, John Dyer, Mme. Baco, Excellent, Mrs. W. K. Harris, Harry May, Mrs. Hicks Arnold, Alcazar, John Firth, Mr. A. G. Ramsay. Edward Swayne sent flowers of his new carnation Aurora. Messrs. A. D. Perry & Co. had a very pretty stand of bulbs and florists' supplies; a large tree draped with Florida moss and bitter sweet berries at the base had a very pleasing effect.



Syracuse will be heard from in the matter of seedling chrysanthemums. Peter Kay has three he is justly proud of, J. J. B., Lady Ann and Peter Kay. They are all yellow, of immense size and substance. G. Ham has one, an incurved variety; it certainly is a beauty and he will submit his flowers to the FLORIST for opinion of its merits.

L. E. Marquisee had a fine stand of cut chrysanthemums and roses. The following were fine examples: J. C. Heuzsy, Hon. E. H. Fitler, Phoebus, Mrs. G. Bullock, Grandiflorum, Lilian B. Bird, Mrs. C. H. Wheeler, Louis Boehmer. This exhibition and P. R. Quinlan's were disqualified by the judge in the cut flower class for not naming their varieties. Mr. W. Hurson (late of Oswego), head gardener to Mrs. Theo. Dissel, acted as judge and gave great satisfaction. Great credit is due to the committee having charge of the show, also our worthy president who as usual worked like a beaver all the time. A show without A. D. Perry to look after the interests of every one would be a sorry affair. H. Y.

Springfield, Mass.

The Hampden County Hort. Society's chrysanthemum exhibition was the most satisfactory show ever given here. The plants shown were better than those on exhibition at New York, New Haven, or Hartford, and the local growers are entitled to much credit for the excellence of what they were able to show. A. N. Pierson of Cromwell, Conn.; Pitcher & Manda of Short Hills, N. J., and E. A. Wood of West Newton, Mass., were the non-resident growers that sent in cut blooms.

Mr. A. Miellez, J. E. Taylor, H. C. Hamilton, C. H. Dennison, Gurdon Bill and E. S. Brewer were the competitors with plants. For best 12 plants, distinct named varieties, the awards were in this order: A. Miellez, C. H. Dennison, H. C.

VIEW AT THE NEW YORK CHRYSANTHEMUM SHOW.

Hamilton, E. S. Brewer, J. E. Taylor; for best six plants, A. Miellez, Gurdon Bill, C. H. Dennison, C. E. Taylor, H. C. Hamilton, E. S. Brewer; for best three plants, A. Miellez, H. C. Hamilton, J. E. Taylor, G. Bill, C. H. Dennison, E. S. Brewer; single specimens, A. Miellez (Ivory), C. H. Dennison (L. Canning), E. S. Brewer (M. Boyer), H. C. Hamilton (Mrs. Dunnett), G. Bill (M. Comte de Paris), J. E. Taylor (Viviand-Morel); specimen standards, H. C. Hamilton, C. H. Dennison; three standards, Dennison, Hamilton.

Cut blooms, best display, A. N. Pierson, J. E. Taylor, E. H. Howland; 25 cut blooms, distinct named sorts, A. N. Pierson, Elijah A. Wood; 12 named varieties, cut, A. N. Pierson, Pitcher & Manda, J. E. Taylor; single bloom, Pitcher & Manda (Ada McVicker), A. N. Pierson, J. E. Taylor.

"As a rose show alone the exhibition was a success—the specimens were superb;" in fact the best ever shown in this place, a gentleman from Hartford declaring that they fully equalled those shown at New York. C. F. Fairfield is the grower. E. D. Shaw of Holyoke also sent in roses, as well as carnations and cut chrysanthemums. E. H. Howland, also of Holyoke, had a beautiful lot of "Pinks;" his Excellent, a seedling, is quite like the American Flag.

A new feature this year was the interesting of children in the exhibition. Last May several hundred plants were given to children of the schools with instructions for growing them for this exhibition. About 1,000 plants were returned with excellent results, although in some cases the little ones didn't succeed very well. For this there was given out 70 prizes, varying from $2 to 25 cents, and in addition two capital prizes for the two best, one a dress pattern valued at $10, to the girl that should show the best plant; the other a new suit of clothes, value $10, to the boy that should bring in the best plant grown by a boy. This plan can be practiced with profit by societies in localities where the interest in flower shows is not sufficient to pay expenses.

The plan not only helps to encourage the growing of plants, thus becoming an educator and fulfilling one of the offices of a horticultural society, but the increased interest taken by the younger members of the family, draws out the older people to see. The Hampden Co. Hort. Society is well pleased with the working of the plan this season, and will repeat some such plan for their future shows.

W. F. GALE.

Pittsburg.

The first attempt at a floral exhibition and chrysanthemum show under the auspices of the Pittsburg and Allegheny Florists' and Gardeners' Club is a thing of the past. It was held in the Pittsburg Auditorium on Penn avenue, below Sixth street, from Nov. 10 to the 13th, and was successful from every point—artistically, financially and socially.

The hall—some 250 feet long and 56 feet wide—was most beautifully decorated. The ceiling was covered closely with autumn foliage and evergreen branches arranged in panels, the center panel being composed of red oak, with a border of evergreen, this again surrounded by a broad band of bright maple foliage reaching to the wall. Underneath this foliage and suspended from it were numerous handsome Chinese umbrellas and lanterns arranged for effect. The balcony surrounding the whole building was handsomely festooned with laurel and gaily decorated with Chinese fans, umbrellas and lanterns, the whole of the overhead portion of the hall making one of the grandest effects imaginable.

The ground floor was subdivided for the individual displays of chrysanthemums in pots and all varieties of exotic plants, the display of which was most magnificent.

The arrangement of the tables on the stage at the north end of the hall for the display of cut blooms for competition was very satisfactory, although more room would have made it much more convenient for the numerous visitors.

Three dining-rooms were erected on the stage at the extreme end of the hall for the competitors entered for the John Dimling prize of $100, and were each very handsomely decorated, the competitors, Messrs. Ludwig & Richter, John R. & A. Murdoch and B. A. Elliott Co. doing their very best to carry off the prize. Messrs. B. A. Elliott Co., however, succeeded in capturing it.

In the other cut flower displays nearly all of the competitors carried off 1st prizes in one class or another, Robert C. Patterson carrying off 5 out of the 6 he entered for.

A. W. Smith was very successful in his competition for premiums for chrysanthemums in bloom, winning, if I remember right, 13 1sts and one 2d premium in this class.

In the cut bloom display the premiums were about evenly divided, some getting 1st premiums in one class while others were successful in others, C. K. Hoffmeyer capturing the first prize for "the best 20 varieties, long stem, 3 of each variety," Pitcher & Manda, of Short Hills, N. J., 2d.

The awards of the judges in the different classes, while satisfactory to the

great majority, had some little fault found with them by others.

The show was an artistic success beyond the greatest expectations of all, and it was a financial success in every way. Every account of every description will be paid in full and there will be a nice little balance to start the next show with.

All in all, Pittsburg's chrysanthemum show was second to none on this continent this year of 1891.

R. C. PATTERSON.

Oshkosh, Wis.

The show here this season is very interesting. The first impression is made very pleasing to the visitor by the agreeable entrance and view presented as you step inside. The hall occupied is neat, well finished and lighted and just large enough to comfortably hold the exhibits. There is a plan in the arrangement which is very pleasant; from any position, you view a hall full of beauty and at the same time you do not see all of interest from any one point; you are filled with a desire to go a step further continually and the picture keeps changing as you advance. These general effects I think are extremely valuable for the benefit of the public, over and above the study in detail of specimen individual plants and flowers by experts. This show was not lacking, however, in that line. I do not think it possible that any of this season's shows contained finer chrysanthemums than those grown by Mr. Lewis, either cut blooms or potted plants; plants six feet high, loaded with perfect blooms and beautiful leaves down to the very pot. The cut blooms are certainly very close to perfection. A beautiful clump of plants, not entered for competition, from Mr. J. C. Vaughan, contained the only standards in the hall.

From the appearance of the carnation blooms it is quite evident that this flower is growing in popularity here as well as in other places. The least conspicuous entries and the most lacking in merit were the baskets of flowers; good flowers, but poorly arranged.

Of the premiums for chrysanthemums all the firsts (6 in number) went to Mr. J. Lewis. Of the seconds in these classes Isaac Miles received four and J. Nelson two. Of the thirds Geo. Boozer received three and J. Nelson two.

Mr. Lewis also captured first in each of the two classes for cut blooms, Messrs. Pitcher & Manda and Isaac Miles taking the seconds and J. Nelson the thirds.

In palms and foliage plants Mr. Lewis received the firsts and Mr. Miles the seconds.

For roses and carnations and basket of flowers J. Nelson captured the firsts, the seconds and thirds being divided between Messrs. E. Hantze and Isaac Miles.

A certificate of merit was awarded to Geo. Boozer for a beautiful specimen of Phœnix rupicola. A vase of the new rose, Mme. Pierre Guillot, attracted considerable attention.

In the amateur classes A. H. Bartlett received all the first premiums. C. B. W.

Washington.

A newspaper man visited our show on the morning of the opening day and among the points of interest to which his attention was called was a nepenthe or pitcher plant. When his paper came out in the evening the "intelligent compositor" had made him mention the "*butcher*" plant as a great novelty, and crowds wanted to see it from that time. Now it so happened that some party had collected a large flat of Dionea muscipula or Venus' Flytrap in North Carolina and presented it to Secretary Oliver to be exhibited if desired, and accordingly it was in a prominent situation.

People were asking for the "butcher plant." We couldn't "tumble to the racket" generally, as most of us had no knowledge of the newspaper incident. But it wouldn't do to appear ignorant and as we knew of nothing else of a slaughtering nature beyond the dionea our visitors were piloted to them and their insectivorous tastes elaborately explained again and again.

There appeared some doubt once in a while as to the entire appropriateness of so savage a name for the innocent looking little whorls of leaves.

Mrs. President Harrison, the Vice-President and Mrs. Morton and party visited us Friday evening, spending over an hour in quite evident enjoyment of the show. Both Mrs. Harrison and Mrs. Morton are very fond of flowers.

At a special meeting of the club on Tuesday, the 17th, a report was made by the secretary showing that we would net a small sum out of the show, which was more than was expected at the outset.

An auction was held on Monday following the exhibition, at which a large amount of stuff was sold, mainly chrysanthemums and palms, at prices, however, which were hardly remunerative except as clearances.

We extended our show two days, believing it would be of advantage both now and in the future by enabling us to advertise ourselves in admitting the school children free on Saturday. C.

Galt, Ont.

The Galt Horticultural Society's first annual chrysanthemum exhibition was held in the Town Hall on Tuesday and Wednesday of week before last. The decorator used his skill to the best possible advantage as the flowers were beautifully arranged throughout the hall, giving ample room for spectators and a splendid chance to see the plants. The entries numbered nearly 100; the professional and cut flower classes being well filled, but the amateur class failed to bring out many exhibitors. The exhibit of Pitcher & Manda, Short Hills, N. J., was a magnificent display and quite a surprise to many of the people here. The exhibit consisted of 25 varieties, nearly all new, and in most of them the blooms were very large. No doubt by another year some of our florists will endeavor to have some specimens equal to these. On account of the disagreeable weather on Tuesday the attendance was not large, but on Wednesday large numbers visited the exhibition. James B. Hay, of Brantford, was the judge.

In the classes for chrysanthemum plants, open to all, J. Langham received 3 first premiums, 2 seconds and 1 third; J. W. Scott 2 firsts, 3 seconds and 2 thirds; John Wells 2 firsts, 2 seconds and 1 third; A Common 2 firsts, 1 second and 1 third; John Goldie 1 first; Mrs. A. T. H. Ball 1 first; H. McCulloch 2 seconds and 3 thirds; D. McGeorge 1 third.

In miscellaneous plants, open to all, J. Wells received 3 firsts, J. Goldie 2, J. W. Scott 2, and D. McGeorge 1.

In chrysanthemum cut blooms, open to all, J. Wells made a clean sweep, taking first in each of the six classes. Of the other premiums J. W. Scott received 2 seconds, D. McGeorge 1 second, and A. Common 2 thirds.

In cut carnations and roses, and table and hand bouquets Mr. Wells was again to the front, taking first in each case, the seconds being taken by D. McGeorge, A. Common and H. McCulloch.

In the amateur list 3 firsts were taken by Robt. Baird and 1 by Thos. Vair.

New Orleans.

The first chrysanthemum show of the New Orleans Horticultural Society, while not a financial success, was the greatest success yet achieved by the society during its existence, and had the show been held ten days sooner it would have been even more successful, for many of the finest plants we had were past their best.

Chrysanthemums have never before been grown for exhibition purposes here and the public was much astonished to see the large beautiful flowers of all colors and forms. The display excited much enthusiasm.

Mr. John Eblen received first prize for best 20 chrysanthemums and gold medal for best 10, Mr. C. W. Eichling second prize for best 20 and best 10, Mr. Chas. Panter 1st for best 5, Geo. Thomas 2d; Mr. J. H. Menard for best specimen (Rosalind—a plant with over 200 flowers); for 4 standards not less than 2½ feet high C. W. Eichling 1st; for 12 varieties grown in not larger than 6-inch pots, one flower each, John Eblen 1st, Chas. Panter 2d. In cut flowers Mr. C. W. Eichling received 1st for 24 single flowers, Geo. Thomas 2d; C. W. Eichling 1st for 12 single flowers, Geo. Thomas 2d; John Eblen 1st prize for 30 varieties, 3 of each kind, C. W. Eichling 2d; the Champion flower (Puritan), a real beauty, C. W. Eichling.

Among the varieties shown the judges especially commended Waban and Puritan.

There was also a fine display of decorative plants and a few orchids in good condition. Cut roses were not as good as usual at this time of the year owing to the long drought.

The cold wave which struck New Orleans on the 17th, the opening of our show, kept many hundreds from attending, the mercury having fallen from 60° to 34°, but we have the satisfaction of knowing the chrysanthemum can be cultivated to as near perfection here in the south as anywhere in the union.

But strange to say new varieties marked "late bloomers" in the catalogues were the first to bloom in this climate.

CHAS. WISE.

Detroit.

At our exhibition both the plants and cut flowers were of much better quality than last year, and the show was largely attended.

In the chrysanthemum plant classes first premiums were awarded to Holznagle & Noel for 10 plants in 10 varieties, 5 in 5 varieties, 6 in 6 to 8-inch pots, 25 in 4 to 5-inch pots grown to single bloom, 50 ditto, 5 plants white, 5 yellow, 5 pink, specimen white, specimen yellow, 5 standards and 2 standards. To Detroit Floral Co. for 12 plants in 6 to 8-inch pots in 6 varieties, 6 half standards, 5 plants in fancy colors, specimen pink, specimen fancy color and specimen standard.

In chrysanthemum cut blooms first premiums were awarded to John Breitmeyer & Sons for 100 blooms in 20 varieties, 50 in 15 varieties, 12 whites in any variety, 12 yellow ditto, 12 pink in one variety and 12 assorted. To Pitcher & Manda for 12 bronze in one variety.

In cut roses Holznagle & Noel were first for Waban, Mermet, Bride, Hoste, Gontier, Bon Silene and Albany; John Breitmeyer & Sons for American Beauty, La France, Sunset, Cusin and Watteville; Detroit Floral Co. for Perle and Wootton.

For 100 carnations in 5 varieties John Breitmeyer & Sons were first, Holznagle & Noel second and Bruno Schroeter third.

For mantel decoration John Breitmeyer & Sons were first, Detroit Floral Co. second and Bruno Schroeter third. For dinner table decoration J. Breitmeyer & Sons were first, Bruno Schroeter second and Detroit Floral Co. third. John Breitmeyer & Sons also won firsts for design of chrysanthemums, basket of chrysanthemums, basket of roses and bridal bouquet, the seconds being divided between the Detroit Floral Co. and Bruno Schroeter.

The judges of plants and flowers were J. M. Gasser, of Cleveland, and Prof. L. R. Taft, of the Michigan Agricultural College. The judges of floral arrangements were 16 society ladies of this city.

San Francisco.

The third annual fall exhibiton of the California State Floral Society, held Oct. 28 to 30, was very successful. Perhaps the largest exhibitor was Mr. Timothy Hopkins who showed some magnificent chrysanthemums. John H. Sievers and the Japaese Gardeners' Association also made splendid displays, the remainder of the exhibits being smaller and made mainly by amateurs.

The special premium for potted chrysanthemums was taken by Timothy Hopkins and that for cut blooms by John H. Sievers. The regular prize for potted chrysanthemums went to the Japanese Gardeners' Association and that for chrysanthemum flowers to A. Yoshuke. Timothy Hopkins took the prize for roses in the class for professionals.

On the second day there was a competition in floral arrangements. The first prize of $75 for the most artistic floral decoration was awarded to Geo. P. Jones of Sausalito, for a mantel decoration of yellow chrysanthemums, adiantum ferns and roses, the second prize of $25 going to John H. Sievers for an arrangement representing a bit of tropical forest scenery. A hammock of roses was suspended from two tree ferns, the trunks of the latter being covered with rare orchids.

The exhibition was very largely attended. The daily papers were very liberal with favorable notices and the show may be considered a success from every point of view, though of course there is still room for improvement.

New Britain, Conn.

The third annual chrysanthemum show of the New Britain Horticultural Society, held November 11, 12, and 13, was a decided success. The large hall of the East Main Street armory was filled with the exhibits, which were of an exceptionally meritorious character considering that the society is composed entirely of amateurs. The principal exhibitors were George Raab, gardener for J. A. Traut, J. A. Blake, E. M. Hulbert, A. J. Sloper, M. M. Houck and John Gerard.

The first prize for 15 plants was awarded to Geo. Raab, who also received first for best seedling raised by a member of the society in 1891. The plant is a fine, flat Chinese flowered pink and white, very full and handsome.

First prize for one specimen bloom was also taken by Geo. Raab with a flower of Louis Boehmer measuring 8 inches in diameter; 2d by E. M. Hulbert with a flower of G. F. Moseman, 3d by A. J. Sloper, who exhibited a fine bloom of Mrs. De Witt Smith.

Some beautiful specimens were shown in the class of plants grown to one bloom in 6-inch pots, the Victor Patalier exhibited by J. A. Blake attracting much attention.

The attendance was fair, but not as large as the society would desire, not quite clearing expenses. The interest of the visitors seemed to be centered in the specimen blooms, both cut and on potted plants, and in all probability the efforts of the society next year will be concentrated in that direction.

E. M. HULBERT, Sec'y.

New Bedford, Mass.

The New Bedford Florists' Club held their annual chrysanthemum show in the city hall on Wednesday, Thursday and Friday, Nov. 11, 12 and 13. The plants and flowers were both far superior to those shown last year. The prizes in flowers were taken by Messrs. Keith, Eaton and Rennix and there were some very well built blooms shown by these gentlemen. A very fine exhibition of blooms was made by Mr. Martin of Fairhaven, which were not entered in competition.

The plants as a rule were very well grown and were as fine as any the writer has ever seen outside of the shows in the larger cities. The principal prize which the club offered was a solid silver cup for the best six plants and must be won two years before becoming the property of the winner. It was taken last year by Mr. John Rennix, gardener for Mrs. Haskell. The contest for this prize this year was very close and all three exhibitors staged some very fine plants. The first prize was awarded to Mr. Dennis Shea, gardener to Mr. Hathaway; second to Mr. Driscoll. In Mr. Shea's collection was a very handsome plant of Pres. Harrison and beautiful plants of Louis Boehmer, Edwin Molyneaux and Puritan; Mr. Driscoll showed fine plants of Puritan, E. Molyneaux and Lilian B. Bird; and Mr. Rennix showed a very handsome plant of Grandiflorum.

The judges were Messrs. A. H. Fewkes and E. A. Wood of Newton.

Louisville, Ky.

In spite of unfavorable weather and other drawbacks the chrysanthemum show was a success financially as well as artistically. The florists are quite jubilant over the success of the exhibition, and will hold a meeting some time next month to perfect plans for another show next year.

For best collection of chrysanthemums in pots first prize was awarded to Jacob Schulz, second to A. Lauer, third to S. J. Thompson. For best display of cut blooms Nanz & Neuner were first, Jacob Schulz second, S. J. Thompson third.

In floral arrangements Wm. Mann won first, C. W. Rieman second and S. J. Thompson third.

The premiums were all donated by various public spirited citizens and business houses. A very handsome souvenir programme was printed and turned in a revenue through the advertisements. Music was made a feature. The hall was very handsomely decorated under the direction of Mr. S. J. Thompson.

New York.

All the cut flower men report increased activity and there is very little good stock left unsold at the close of each day. Chrysanthemums still continue to come in abundantly. Violets of good quality are scarce and winter prices are willingly paid for them. Even $2 and $2.50 per 100 is being paid for first class stock, and there is quite a scramble for them at that. American Beauties are the favorite speculative stock however, and the growers of this variety, the wholesalers, and the retailers are all having quite a circus over it just now. As is apt to be the case when any special variety is in big demand the large growers have taken a hand in boosting the prices and have succeeded to the extent that $60 per 100 is paid for selected roses. Rumors of contemplated combinations between the large growers fill the air, and several of them have withdrawn their goods from their regular commission man and placed them elsewhere. An attempt is being made to establish a schedule of grades, taking the length of stem as a criterion. A rose with stem from 13 inches up is classed as No. 1. Below this there are five or six grades, the lowest being those with stem from one to four inches. The wholesale dealers deride this classification, however, and claim that it is absurd to put a 13-inch stem in the same class with a 3-foot one, also that size, form and color of bud is fully as important a point to be considered as length of stem. Counter threats of combinations on the part of the retailers and commission men are heard, and in the meantime the growers are making a good thing out of the American Beauty. One thing is certain, there will be no trouble to dispose of every good bloom that can be obtained until the holidays, and the fun is only beginning. Harrisii lilies are quite plenty and have dropped from $3 to $2 per dozen. Cypripediums are also very abundant, selling from $12 to $15 per 100. The first Roman hyacinths of the season are coming in.

Frank L. Moore, of Chatham, is sending in his sport from Mermet in good shape. He has named it Hugh Waban to distinguish it from Waban. As compared with Waban it appears to be a larger and better formed bud, but lighter in color, of a shade midway between Mermet and Waban.

There was a great clearing out sale of orchids at auction by Robt. B. Young at the greenhouses of Frederick Mau, on November 19. A big crowd was in attendance and the sale amounted to about $3,500. This is Young's second big orchid sale within ten days, the Sander sale of Cattleya labiata and Dendrobium Phalænopsis having netted nearly the same amount. Some of the noticeable prices paid were $21 for Vanda Sanderiana, Lælia anceps Sanderiana $17.50, Cattleya Mendelii miniata $18, Dendrobium nobile Arnoldianum $26, Cypripedium Morganianum $46, Cœlogyne cristata alba $20, Cypripedium Measuresianum $45, Cattleya Skinneri alba $56, Lælia autumnalis alba from $24 to $51, Cypripedium Schroderæ $52, and Saccolabium giganteum album $45.

Adolph LeMoult has hired the front part of R. B. Young's auction room for the winter months and expects to get a big down town holiday trade.

Mr. G. G. Brinkworth, who has been in the employ of Wm. Elliott & Sons, leaves for England on December 1, he having been summoned home to take charge of his father's nursery and plant business at

Winchester, his father being dangerously ill. Mr. Brinkworth has made many friends during his short sojourn in this country.

Mr. H. A. Daacke, who has been for many years connected with Mr. F. E. McAllister, will start a seed store at 410 West 14th street December 1.

W. S. Allen has got through with his flower business on 23d street and has gone to work in the employ of F. E. McAllister.

The dealers holding the main stock of Cannas Mme. Crozy and Star of '91 are said to have combined and agreed upon a minimum price for these varieties of 60c for Crozy and 50c for Star for the coming year.

The oldest daughter of Mr. A. Hulsebosch died suddenly November 14 from the effects of a slight fall received on the 12th, that was not at the time supposed to be serious.

The first premium for double violets at the Madison Square show was awarded to Chas. L. Doran. This is a distinction worth winning, considering the present price of good violets in this market.

Philadelphia.

The past week has been quite a contrast to the preceding one. Everything then was hurry and bustle, the work for the exhibition, the bowling match, the dinner, with the legitimate demands of trade made it a very busy week.

With the exception of Wednesday, which was a very busy day, some twelve weddings taking place and at all of which there were quite handsome decorations, the business of this week has not been anything to talk about.

The mums are very plenty, the best selling at $1.50 a dozen wholesale, while really fine flowers can be had for $1 per dozen.

Roses are plenty, and good ones seem to be in fair demand. La France, Brides, Albanys, Mermets, Cusins and Guillots sell for from $4 to $5, while Perles, Niphetos, Sunsets, etc., bring $2 to $3, carnations $1 to $1.25, bouvardia and heliotrope the same, valley $7.

We cannot pass by the exhibition without entering our solemn protest, and we feel confident it will be for the last time, against the exhibition of cut blooms without stems and mounted on a black cloth surface. To cut the stem off, like they sometimes cut the tail off a dog, close behind his ears, is just about as bad for the chrysanthemum as it is for the dog.

The beautiful vases of cut blooms seen at Madison Square Garden and also at our local show should certainly be convincing evidence that the flat box and its bottles must now give place to the vase, that will support a stem from one to three feet in length, showing the flower with its foliage and graceful, natural appearance.

Who would think of cutting the stems from roses? On the contrary, when placed on exhibition one almost expects to find the roots in the bottom of the vase, so far do they stand out, and yet the chrysanthemum is so much the larger flower.

Financially the show was a great success and quite a snug sum will be found in the treasury when the bills are all paid. The newspapers were appealed to, and they responded nobly. Mr. Geo. Watson had the advertising in charge and through his efforts the exhibition was better advertised than ever before.

The bowling match came off Tuesday afternoon as per agreement, but not as per expectations, at least hereabouts. To think that our team, the pick of the club, the men we would have backed to any amount, the team that even dared to go to Canada and bring back the silver cup and to which we have ever pointed with pride. To think that this team should have been beaten by 53 pins, when the other fellows only made an average of 124 to a man, it makes us weep. So we will draw the veil and mourn in solitude.

THE SCORE.

	New York.	Philadelphia
First game	797	765
Second game	746	845
Third game	798	785
Totals	2311	2395

Philadelphia won by 84 pins.

The rules governing the match now called for another game of ten frames to decide the winner, as each club had one series of 3 games to its credit. And it was during this game that the lamentable circumstance above referred to took place.

Score final game: New York 748, Philadelphia 696, New York winning by 52 pins.

However as they beat us by only 21 pins in the grand total, which was, New York 5686, Philadelphia 5665, they certainly had to play to win and they have our hearty congratulations.

The chrysanthemum dinner proved to be a very enjoyable occasion. It was held in the lower hall, commencing at 10 p. m., a rather late hour, but as the dining room is accessible to visitors it is necessary to wait until the show is closed for the night. There were quite a number of visitors present, among whom were J. N. May, Messrs. Julius and Theodore Rochrs, Alex Burns, I. Forsterman, Ernst Asmus, H. Keller, J. L. Dillon, B. F. Dorrance, Wm. Elliott and others.

After the inner man had been satisfied and the coffee and cigars were passed around Mr. Craig started the ball rolling in a fine address. The chrysanthemum was the first toast, the rose, the carnation and then Mr. John Thorpe, the mention of whose name called forth great enthusiasm and his health was drunk and all joined with fervor in the singing of "He is a jolly good fellow."

Toward the close Mr. Craig undertook to show up some of the peculiarities of our genial Dan, and how he was sat down upon for his trouble only those present will ever know. Dan's remarks had a telling effect. They were of the kind that have to be heard to be appreciated.

One of the features of the occasion was the poem written and read by Mr. J. D. Law, of Camden, N. J. It contained many witty references to members of the club and the visitors. The chorus was joined in heartily by all present, they being presented with slips containing the words. It was sung to the air of "Marching Through Georgia."

There was quite a scare at Hort. Hall last Thursday evening, when in lighting the hall up some fancy stands or booths of the Food Exposition now in progress there caught fire, and about $250 worth went up in smoke. The fire was extinguished before any damage to the building occurred, and a different system of lighting is to be put in at once.

At the meeting of the Hort. Society Nov. 17, the election of officers to serve for the ensuing year took place, the following gentlemen being elected: President, Geo. W. Childs; vice presidents, Robert Craig, Robert P. Harris, Wm. A. Reed and Chas. H. Miller; treasurer, Thomas Cartledge; corresponding secretary, Edwin Lonsdale; recording secretary, D. D. L. Farson; professor of botany, Chas. Schaffer, M. D.; professor of horticultural chemistry, Prof. Persifor Frazer; professor of entomology, H. C. McCook, D. D.; librarian, D. D. L. Farson.

Boston.

The florists are all fairly busy, although there is no scarcity of flowers. The weather has been warm and pleasant and the street fakirs too are making the most they can of the situation. Carnations are more abundant and are of fine quality, especially the Grace Wilders which are unusually clean and bright colored. Violets continue rather poor. Chrysanthemums are still very plenty and constitute the chief decoration of the store windows. Some of the specimens shown thus are fine exhibition flowers and the average of quality all through is high. There have been several weddings and other society events during the past week and more are to occur during the coming week at which the floral decorations are to be quite extensive. Indications point to a prosperous season and a liberal use of plants and flowers for such occasions.

There are some very fine orchids, particularly oncidiums, coming in and among the noticeable flowers in one window is a lot of handsome white camellias cut with stems and foliage.

The final settlement of the Phelps concern at South Framingham has been made by Assignee Breck. Individual creditors get 5 per cent and co-partnership creditors 7 9-10 per cent of the amount of proven claims. The assignee found the estate in much worse condition than had appeared at the beginning.

C. Campbell, of Montreal, has been paying a visit to the Hub this week.

Advertising the Flower Show.

An excellent suggestion was made by the editor of the FLORIST in regard to this subject some time since. He recommended the exchange of proofs of the advertising matter used by the different societies, so that each could "catch on" to the good points of the other, and thus be able to advertise their respective shows more effectively and economically the next time. It is generally the gardeners and growers who are most active in getting up a show, and the majority of them are, as a rule, so engrossed in making a fine exhibition that they overlook the equal importance of blowing their horn of announcement "loud and clear and long." It seems to me, therefore, that the publication committees of the different shows should give the methods publicity, not only to the committees, as suggested by the FLORIST, but also to the growers in general, for no one can tell when the "conceit of chance" may put them on the publication committee of their flower show. The columns of the FLORIST are the best channel for conducting such a discussion, which should be full, frank and free in all particulars.

The philosophy of advertising is a pretty large subject, and even its experts are divided on some points. But there are certain fundamental principles which all good advertisers are agreed upon, and to get these principles firmly imbedded in the minds of all the readers of the FLORIST will be of incalculable benefit not only to the exhibitions, but to each individual in advertising in other directions.

It is with a view of having the matter thoroughly discussed that the publication committee of the Pennsylvania Hort. So-

ciety have asked to give full particulars as to what has been done here at the show just passed, and to ask other committees to give suggestions for improvement of our methods, and also their own experience.

Our show opened on the evening of Monday, Nov. 9, and the first announcement as shown by the following table was made on the morning of Saturday, the 7th:

NAME OF PAPER.	Circulation	Nov 7	Nov. 8, Sunday.	Nov 9.	Nov. 11.	Total Lines.	Rate per Line	Total.

The first thought that will occur after glancing over the above table will be that the committee should have advertised three days sooner and two days later than they did. To have done this, however, would have required about $600 more outlay and the appropriation did not admit of it. Whether it would have paid to make the additional expenditure is a good question to discuss. Personally I think it would. The 44-line advertisement was put in week-days, and the 88-line on Sundays. The Sunday papers are bulky, and an advertisement has to be large enough and striking enough not to be lost in the wilderness of advertising with which the Sunday editions are filled. The theater people follow this plan, and we flower show people must follow suit or be unnoticed, as we are classed by the press under the head of "amusements."

—IN—

Horticultural Hall

(Broad, above Spruce)

November 9th to 14th, 1891

(MONDAY, 8 P. M. TO FRIDAY, 10 P. M.)

THE Grandest Exhibition of the "Queen of Autumn" ever given in Philadelphia. Music by Hassler's Orchestra.

Admission, 50c. Children, Half Price.

The above is a copy of the 44-line advertisement. It is not effective typographically on account of the closeness of the lines in the engraving, which blur in newspaper printing. Three or four lines might also have been saved, but it was got up in a hurry and there was no time to see a printer's proof even before the matter went to foundry. This will point the moral of commencing the preparation of the advertisements at least two weeks before the first announcement is to appear.

Above is the 88-line advertisement. It is better than the other typographically, and stands out boldly in almost any position in the newspaper. An improvement might be made by reducing the depth of the engraving somewhat and by making the lettering on same blacker—that is, by removing the white line.

Six electrotypes of the 88-line were used and eleven of the small. The expense of setting up the type and having the advertisement electrotyped is trivial and should always be done, as the papers nearly all prefer them. Such papers as the *Ledger* allow scarcely any display, and an effective flower show adv. is not procurable from them; but they generally make up for this in their news columns.

It would be interesting to know the cost per line per thousand circulation in each city, as a comparison would give some idea as to whether the committee were getting their full money's worth. I am satisfied that the space used in the foregoing table was purchased at the lowest possible rates, and they would be a good basis for comparison. The total expenditure is $269 for 1815 lines, and the aggregate circulation 770,000, which would give about three-sevenths of a cent per line per 1,000 circulation.

Outside the newspapers the expenditures were $9 for a neat window card 11x15, of which 500 were distributed among the stores, and $11 for 100 of the beautiful chromo-lithographs sent out by the Courier Co., of Buffalo. When mounted on boards and distributed round in prominent positions these latter proved exceedingly effective, and I would favor spending $100 in that direction another year. I am opposed to the old-fashioned bill-posting. I cannot give figures, but I am convinced that it is not an economical method of advertising, especially where there is but a limited appropriation. The Penn. Hort. Society did no bill-posting, either this year or last year.

This is a plain, unvarnished statement of what has been done. No pretence is made that it is the best that could have been accomplished, and criticisms and suggestions will be in order and will be gladly welcomed. G. C. WATSON.

Philadelphia.

In HORTICULTURAL HALL (BROAD, ABOVE SPRUCE)

THE Grandest Exhibition of the "Queen of Autumn" ever given in Philadelphia. Music by Hassler's Orchestra.

November 9th to 14th, 1891.

(Monday, 8 P. M. to Friday, 10 P. M.)

Admission, 50c. Children, Half Price.

News Notes.

UTICA, N. Y.—The Florist Club decided not to attempt a flower show this year, but hope to have matters in shape for one next year.

BIG RAPIDS, MICH.—Since his place was burned last May, L. L. Blair has built on a new site four houses, one 21x100 and the others 20x52, 12x52 and 20x65 respectively. They are stocked mainly for the production of cut flowers.

ST. PAUL.—Our projected chrysanthemum show fell through for the reason that preparations were begun at too late a date. One insurmountable obstacle was the fact that at the late date we began no suitable hall could be secured for the days wanted. We hope for better results next year.

MINNEAPOLIS, Minn.—The annual meeting of the Minneapolis Florist Club was held at the close of the recent chrysanthemum show, and officers for the ensuing year were elected as follows: Gust. Malmquist, president; M. C. Allison, vice president; E. Nagel, secretary; R. Wessling, treasurer; executive committee, J. S. Gray, James Souden, and Gust. Rumler. There was some little dissatisfaction over the awards of premiums at the exhibition, but it was thought best not to change the awards.

BRATTLEBORO, VT.—Mr. D. McGillivray, our highly respected florist, has apparently accepted in good faith the invitation extended to the Yankee young men by the hospitable Canadians last summer, to come up there and help themselves to a Canadian girl apiece, for he has just returned from Ottawa with a bride. On it being suggested that he had made good use of his time during his last summer's trip to Canada he says, "Oh no, that would be entirely too short an acquaintance for a Scotchman to get married on." But we know now why he lingered behind the rest of the party in coming home.

THE AMERICAN FLORIST

Subscription $1.00 a Year. To Europe, $2.00.

Advertisements, 10 Cents a Line, Agate; Inch, $1.40; Column, $14.00. Cash with Order.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

Our Telephone.

"Hello! Is that Mr. Thorley?"

"Yes; what can I do for you?"

"If you can spare time we would like to have you give us a few points on the present condition of the retail flower trade in New York."

"Certainly. What would you like to know?"

"Well, for instance, are you introducing any new or novel features in room decorations this season?"

"Yes; we are always seeking novel effects. The peculiar nature of our business demands that we go to extremes in this direction. Just now we are running strong on yellow and white for room decorations. Groups and grottoes we have abandoned. Instead of spreading our work all over the room, in the corners and on the arches, we take one side only and concentrate all our efforts there, massing the flowers on the wall in one great garland. For example: When we have a large drawing room, say one measuring 25x18, you will see that we can produce in this manner a very bold and striking effect. You understand that I refer now to an afternoon tea or reception, not a wedding or dinner.

"We are using great quantities of English ivy vines. They make very beautiful and effective traceries on light colored walls. The smaller leaved varieties are the most desirable. Smilax we are not using at all.

"It is important that first impressions should be favorable; hence we give particular attention to the decoration of the foyer or hall. When the hall is sufficiently high studded we sometimes drape the ceiling with asparagus, forming a delicate network through which the electric lights shine with beautiful effect. At intervals we attach to the asparagus orchids or other graceful blooms. The balusters we decorate with masses of showy flowers. When the woodwork is dark we use yellow or white; when the finish is light, pink flowers look well."

"Is there anything new in wedding decorations?"

"Well, we have drifted away entirely from the old canopy and wedding bell. When there is a bay window in the room where the ceremony is to take place we concentrate all our decorations in that spot. We can make a beautiful little scene by the use of wire screens at the sides, back, and overhead. These wire forms are covered entirely with choice green and flowers, and form a sort of little chapel where the bridal party and minister are to stand, two or three little posts on either side being so placed that the guests can be partially roped off from the recess."

"How about bridal bouquets?"

"We are making an effort to induce people to break away from the exclusive use of dead white, and to see some beauty in other colors judiciously used. On a recent occasion we made the bunch for the bride to carry of American Beauty roses and lily of the valley. There was considerable comment upon it, but it was apparently a success. The bridal bunch we are making now, and which I call the English spray bouquet, is a long stemmed, loosely tied, graceful bunch, not at all resembling the formal regulation bridal bouquet. We tie it with very narrow white crepe ribbon, using sometimes as much as forty yards of the ribbon for one bunch. This ribbon is caught up in long loops and knots and hangs down among the folds of the dress, forming, in fact, a part of the costume. As a general thing ribbon is not used nearly as much in floral work of any kind as it has been in recent years. For bridesmaids we still make the old conventional bouquet. Very large boutonnieres are popular with the gentlemen, as many as six or seven small Niphetos being frequently used in one cluster. Speaking of roses, the American Beauty is more popular than ever. It has so many good qualities that the tendency is to lessen the demand for early forced hybrids and to discourage the growing of many of these. And this is right. No Magna Charta or other early hybrid can begin to compare with American Beauty when well grown. It is a peerless rose and deserves all the popularity it has attained."

"What is, in your opinion, the outlook for the chrysanthemum?"

"I sold yesterday I believe as many fine chrysanthemums as would have come into all New York in a whole season a few years ago. The quantity we manage to get rid of is almost incredible and we are but one place. Still I fear the chrysanthemum is on the downward track. You ask why? I answer because it is becoming too common and too cheap to hold long the high position it has occupied for the past few years. I have watched the chrysanthemum closely from its first introduction as a fashionable flower down to the present time. Every year it has improved vastly in quality; every year for the past three years it has become cheaper. As to quality, the flowers that I willingly paid $6 per dozen for last year my customers would not look at this year. And of blooms infinitely better we can get all we want for $3 per dozen this year. Do you see the tendency? High class buyers will soon turn the cold shoulder on the chrysanthemum. As soon as the maid can afford to wear a chrysanthemum of best quality for a corsage, from that moment the mistress will have nothing to do with it. It is a fact that the scarcity of any flower goes farther to make it popular with society people than any inherent quality of beauty or sweetness in the bloom itself. Violets are again in great demand, and why? Because good ones are scarce and if a man wants a bunch he must pay $2 for it. Put them down to 60 cents a bunch and see what will happen. The dude will strut down Broadway with a bunch of them in his lapel, but the club man won't. People want what is scarce and the only salvation for a man doing a business such as mine is to always have something to offer which cannot be got on every corner, and there is the secret of the constant changes in fashion, the ceaseless hunt for novelties, the spasmodic booming of new things. Now do you see where the proud chrysanthemum is bound to bring up? Overproduction will be the ruin of it.

"You may say that the cheapness of the flower brings it within the reach of the masses and that with cheapness will come a corresponding increase in number of buyers. But it is not the poor people, no more than it is the 400, who support this business. The great middle class furnishes the flower buyers. I can make no money on any thing that is cheap and plenty and as soon as we find a flower taking the downward course we desert it; we are compelled to.

"Then there are the growers. Vast quantities of chrysanthemums have been sold on the New York market this season for $10 per hundred that never cost the growers a cent less than $25 a hundred to produce. Surely we can stand it as long as the growers can.

"Now don't mistake my meaning. I have always been a close observer. To the fact that this is so and that I constantly look ahead in my business I attribute much of my success, and the buyers will come to Thorley just as long as Thorley continues to conduct his business as hitherto. It has been said that from Tiffany there have sprung one thousand jewelers, but when people want jewelry they still go to Tiffany's. We have business enough to attend to and we will continue to have it. But I take enough interest in the welfare of the business at large to give expression to this one word of warning.

"With the present methods and tendencies in the flower trade, how long will it be before our growers will begin to see that it will be more profitable to tear down one-half of their glass or devote it to other purposes? And between you and me they can't begin it too soon either, for there is entirely too much stuff being grown.

"Call me up again sometime and I will tell you something about dinner parties."

REMOVAL.

BURNS & RAYNOR,

Wholesale Florists,

HAVE REMOVED TO

49 West 28th Street, NEW YORK,

where they will have larger store space and better facilities for their rapidly increasing business. Their method of **Shipping Roses** has given them a large out of town trade and for good flowers, especially **Beauties** and **large Mums** the above address is **Recognized Headquarters.**

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

LARGE DEALERS say that the seed growers are not coming forward with their usual promptness, being apparently in no hurry to dispose of their stock. Knowledge of short crops in Europe or confidence in the predictions of unusual prosperity and increased activity in trade here may have something to do with this.

OWING TO the unusual amount of wet weather in England and throughout Europe the sweet pea crop is almost a total failure. Prices will undoubtedly be much higher next season on account of the scarcity.

MR. WILLIAM MEGGAT, who has been confined to his house with a severe cold since he returned from California, is now able to be about again.

THE concern Jas. Vick's Sons was incorporated November 9th by Frank H., Charles H. and Lucy P. Vick. Capital stock $25,000.

IT IS believed that Chas. J. Deneke, the Salina Floral Co. and John C. Nolan, formerly located at Henderson, Kentucky; Salina, Kansas; Denver, Colorado; Ogden, Utah; and other points, are really only one concern.

SEE NEXT issue for exhibition reports not given this week or last.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

Just Arrived on the S. S. "Athalie."

We beg to announce the arrival, in splendid condition, of the first consignment of **GARDINER'S XX BERLIN VALLEY** which is considered by critical growers to be *the very best on the market.* After filling our contract orders we will have a few cases left (containing 2,500 pips each) which we offer as long as they last at $22.50 per case. Less than case lots, $10 per 1000. **SPIRÆA,** $5 per 100; these are large clumps and *well budded* (worth three of the cheap clumps usually sold). Stock limited.

Although we don't have any "chip on our shoulders", we are not afraid to stand "OUR" VALLEY and SPIRÆA up against any other—bar none. So send *us* your *sample* orders if you are experimenting. Address all orders and correspondence to **21 North 13th Street, PHILADELPHIA, PA.**

JOHN GARDINER & CO.

CHRISTMAS ROSES.

THE LARGE WHITE FLOWERING VARIETY.

Orders are now booked for fall delivery. Having the largest home-grown stock in the world, and in splendid condition, I can do them well. Last year the large size produced over seventy flowers. For several years they have given the greatest satisfaction to my customers.

Extra size	$24.00	per hundred;	$216.00	per thousand.
1st size	16.00	"	135.00	"
2nd size	14.00	"	115.00	"
3rd size	10.00	"	72.00	"
4th size	7.25	"	60.00	"
Smaller plants ($200.00 per 10,000)	2.50	"	23.00	"

Unknown correspondents are requested to add cash or good European references with the orders Orders can be executed at once. Special prices for bulbs and plants on application.

HERMAN BUDDENBORG, BULB GROWER,
Hillegom, = = Holland.

LILY OF THE VALLEY PIPS.

100,000 Berlin, extra selected quality, offered for sale, to arrive in quantities per case to suit, at $9.00 per 1000.

Special prices to the trade, as to quantity.

MUSHROOMS FOR THE MILLION, 16 pages. Free.

JOHN GARDINER & CO.,
Seed and Bulb Growers, Importers and Dealers,
Philadelphia, Pa., U. S. A.

Mention American Florist.

A Local Carnation Society.

A preliminary meeting was held in Kennett Square, Pa., on the 19th inst. to organize a local association of florists. Joshua L. Ladley, of Kennett Square, was called to the chair. Edward Swayne stated the objects of the meeting, when it was decided to organize a society to be called the "Chester County Carnation Society." A committee was appointed to draft constitution and by-laws and the meeting adjourned to meet in Kennett Square on Saturday, 28th inst. A great deal of interest was manifested at this meeting and the "Carnation Belt" will certainly be heard from in the future.

Society of American Florists.

The report of the Toronto convention will be ready by December 1. It is the most voluminous report for several years and on account of unusual amount of editing required, especially in the reports on nomenclature and new plants, is somewhat late in being completed.

WM. J. STEWART, Sec'y.

A FEATURE of the Philadelphia show was the excellent programme with full description of the exhibits, chrysanthemum history, poetry, varieties and advs. The book was thoroughly distributed by young lads in Japanese costume. It was of interest and value to visitors and of benefit to the trade.

W. J. HESSER, Plattsmouth, Neb.

Found Out—On a Flying Trip to Philadelphia.

That Boston takes the lead in matters of taste and Philadelphia proposes to join in the movement against short stemmed exhibits at chrysanthemum shows.

That Araucaria excelsa, Napoleon Baumann, is one of the grandest varieties ever seen.

That Louis C. Madeira which was raised by Henry Surman and is to be sent out by Messrs. Hill & Co. and Robt. Craig next spring is one of the finest incurved chrysanthemums in existence.

That crotons are bound to come into prominence for outdoor bedding in the near future.

That the worst compliment you can pay a friend is to name an inferior variety after him, especially when good kinds are so constantly coming to the surface.

That W. K. Harris' place is a veritable ficus factory, and that his new establishment will be a model place.

That chrysanthemum Marguerite shown by Graham this fall is identical with variety Ruth.

That John Burton's sport from American Beauty is a good find.

A REGISTER for visitors was displayed at the Indianapolis show. It is worth having at every exhibition.

You Can't Afford to do Without the

SNOWFLAKE DAISY

DON'T depend on us for the cut flowers every flower we can cut is sold now, and as many more if we could get them; there is and will be a pressing demand for this inimitable flower; a few hundred pot plants still on hand, 3-inch, $5 00; 2-inch, $3 00 per 100. 5 000 clean, thrifty plants in flats coming into bud and blooming, $2 50 per 100; $20.00 per 1000. (no more clumps). 1000 Bouvardia Davidsoni, 200 Mrs. Cleveland, (crimson), 200 Multiflora Pinks, $2 00 per 100. Of course you know how to PROPAGATE PLANTS, but do you know ALL about it? Our new book "THE NURSERY BOOK," is not about human babies, but does tell all about baby plants, how to propagate OVER 2,000 varieties of them. It is a compilation from the practice of the most skillful propagators in the world. It has over 100 illustrations. Over 300 pages. Price, in cloth covers, wide margins, $1.00; paper, narrow margins, 50 cents.

With Whiskers on Them.

A sprightly young lady called at the greenhouses one day last week and inquired if we had any chrysanthemums with whiskers on them. I blushed and begged pardon as I did not understand, but she insisted there was such a thing. And when I showed her a Louis Boehmer that was it. Wouldn't "Chrysanthemums with whiskers" make a more lurid advertising line than the overworked "Ostrich Plume." And then Louis Boehmer has "pink whiskers" too, and these are quite the fad I understand. Again Louis would enjoy having his name used in this way.

Seriously isn't the practice of naming flowers after one's friends overdone? It seems to me that some of the results are decidedly unpleasant. They do not need to be enumerated, but will be apparent to any one who will give the matter a moment's thought. WESTERNER.

Transatlantic Wit.

Lady M. often visited the bothy. From the frequency of her visits there came to be considerable familiarity in conversation between her Ladyship and the boys. She had one failing. She stuttered very badly. Bill B. had a jack daw which he was teaching to talk.

One day while Bill was busy training his jack daw Lady M. accosted him thus: "W-w-william c-c-can your bird t-t-talk yet?" Bill took a quick glance at her face to make sure he was safe and then replied: "If he could not talk better than your Ladyship I would wring his neck."

Her Ladyship told the "bar" at the dinner table that night.

WE ARE now on the eve of the holiday season, usually a busy, and, rightly planned, a profitable month for our trade. Is your house in order, all details of supply provided for, possible cold anticipated, prompt and safe delivery secured and all new and old business tributary to you solicited? Vigilance is the price of success.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

Chrysanthemum Shows.

Philadelphia.

[CONTINUED.]

Among the novel features at this exhibition were three standards exhibited among W. K. Harris' lot, to which Mark Mills pointed with pride. The three plants collectively made W. K. H. The plants were tilted to one side so that the design could be readily seen. The variety used, I think, was W. H. Lincoln, but am not quite sure about that. However, it was a good yellow and answered the purpose well.

A grafted plant from the same exhibitor attracted much attention, and this is a desirable feature to encourage at all chrysanthemum shows, for in order to deserve success we must have something that is STRANGE, BEAUTIFUL, or WONDERFUL. So says Mr. Edgar Nye, and he is correct. He also says that at an exhibition we must give the people something *instructive* and *unusual*. A grafted chrysanthemum plant combines many of those features which attract the general public, especially if the varieties used in the grafting are selected, that bloom at the same time, and the color combinations are according to rules laid down by our artists.

Mr. A. Blanc's cacti drew forth many exclamations of admiration. Crowds could be seen in the vicinity of this exhibit at all times. Mr. Blanc's collection embraces nearly all known species and varieties. It is said—and I hardly think that any person will dare to dispute—that this aggregation of "queer and crooked" succulents is the most complete and valuable in cultivation. The idea has been revived of holding an exhibition devoted almost exclusively to cacti. Such an undertaking ought to be a success, financially and otherwise. There would be great labor in connection with it, but when once ready for the public's inspection it would be as good at the end of six months, or even a year, as it was the day it opened, with a little touching up here and there, as occasion required.

To return to cut flowers for exhibition purposes. The general dilapidated appearance which is presented—commencing on the second day after the show opens—is a matter of regret to all concerned, both management and public. Boston—again in the lead—has in operation a plan which all horticultural organizations would do well to follow, and that is: The committee on awards examine every day during the exhibition all cut flowers in competition, and each exhibit is given a number of points, according to its merits. At the end of the show, the exhibit having the highest number of points gains the prize. This appears to me to be the only practical solution of the problem of preventing cut flowers from becoming an eyesore after the second day. This, as I understand the matter, applies to designs, as well as all classes of cut blooms. I believe it could be advantageously applied to plants also. It would, I know, involve lots of work for the judges, and this is the greatest difficulty in the way of carrying out the much-needed reform.

Not having an official list of the premiums as awarded, I am unable to give it here. Heretofore I have been favored with one, but on this occasion for some unaccountable reason it was omitted. Some of our daily papers are accurate in these reports, but I dare not send the list as published by them without first verifying it by the official report.

Among the seedlings not before noted, Wm. K. Harris had a few good ones; so also had Charles W. Trotter (Thos. Monahan, gardener); Robert Carey, gardener to T. C. Price, also had a good lot.

Now is the time to call the committees together for the purpose of revising the schedule, while the amendments deemed necessary are still fresh in our minds. No matter how carefully schedules are revised and compiled, some inaccuracies will occur. Many may be printers' errors, others may be oversights, and again, some may not develop their incompleteness until judges are ready for their duties, schedule in hand.

I have in mind one class which caused some unpleasantness, on account, presumably, of an oversight. It read as follows: "36 blooms, 12 varieties." One exhibitor understood this to mean 36 blooms, 12 varieties, 3 of a kind, and he staged his exhibit accordingly. Another exhibitor did not understand it in that way. He exhibited 36 blooms, 12 varieties, but a preponderance of his blossoms were of the larger and better varieties, and the latter was awarded 1st premium. There seems to be no doubt in the minds of everybody whose attention has been drawn to the matter that when that class was established, "three of a kind" was intended to be a part of it. The judges, acting as they do generally, up to the letter of the law rather than the spirit, it behooves all committees having such matters in charge to be doubly careful about the *wording* of the different classes.

It is very trying to the patience of the officers when these little snags are struck, especially after explanations are made and the disappointed exhibitor remains discontented and keeps harping on the same old tune in season and out of season.

It is generally understood among exhibitors, judges and officers connected with horticultural exhibitions that plants or blooms in competition wrongly named or not named at all are disqualified, and it is generally conceded to be *just* to do so. It

has become, as it were, an unwritten law. A case was spoken of a day or two ago where the judges at a chrysanthemum show acted up to the letter of the law rather than the spirit. They had a class to judge something like this: "25 blooms, 25 varieties, *named*." There were four or five collections in competition. One, the best lot, had a few seedlings among them under number. The exhibitor himself did not accompany his flowers. Some of the other exhibitors also had seedlings in their collections, and after a little consultation among themselves decided to put names on their seedlings, thus complying with the requirements to the letter, and winning 1st and 2d prizes with inferior flowers, while a better article was ruled out on a trifling technicality. This might not have been noticed by the judges had not one of the exhibitors, who had named his seedlings after they had been staged, persistently protested against his absent competitor's superior exhibit being not exactly according to the schedule.

A plan in operation at the New York show could be well adopted by all similar organizations. It is in effect that the club or society under whose auspices the show is held have at foot of entry slip a disclaimer, releasing the society from all responsibilities if any of the exhibits are damaged, lost, or stolen. An addition to the rules and regulations of the Penn. Hort. Society will have to be made at the next meeting. This has become necessary in view of passing events, as self-protection. Of course, all exhibits from a distance, where the owner cannot possibly accompany his contributions, will be as jealously guarded as it is possible to do at shows of this kind. A written request should in all cases be sent with all entries to carefully guard those which may be new or rare. L.

Baltimore.

November 10 promised fair enough all day to delight the hearts of the members of the florists' club and make them anticipate a renewal of the grand weather of last year, but a drizzling rain set in at 5 p. m. which continued until next day and cut down the attendance to a small figure. The music was a new and very pleasant feature of the show and was the one thing lacking last year that we had this year in a very satisfactory form.

There was not a single feature of last year's exhibition that was not improved upon this year; the plants were larger, more perfectly formed and clothed with foliage to the pots; the cut flowers were so nearly perfect in form and color as to leave nothing to be desired and in the matter of size seemed to be on the very line between large enough and too large. The design work was incomparably superior to that of last year; the table decorations were *table* decorations, not decorations of 3-foot benches, but tables, flashing with silver and sparkling with cut glass, set by the best caterers of the city for twelve guests and decorated with costly flowers in a manner that showed a high degree of artistic skill and most careful execution. So with the mantel decorations; the mantels were works of art before a flower was placed on them and when finished it was impossible for an unprofessional eye to select the best. In fact competition was generally so very close that many of the prizes were awarded for reasons that were not plain to the average spectator, as for example the case of a very finely grown plant offered by Mr. Chas. M. Wagner, which was not successful because the pot in which it was grown measured 6½ inches instead of 6 inches, nevertheless there was no grumbling at the decisions, but general rejoicing that the exhibits were of so uniform excellence.

Fortunately most of the cut blooms were not for competition or it is safe to say the judges would have wished themselves back in Washington ere they finished the awards. This was a corner where the Baltimore florist loved to linger, for was not New York represented here? And did we not hold our own with that great city? Aha! Perhaps even a shade more than that.

On entering the door after the eye had grown accustomed to the field of brilliant colors the nearest plants attracted attention and they were well calculated to hold it, for finer plants could scarcely be desired than the winner of the first prize for 24 specimens in 24 varieties. They were Geo. Daniels, L. Boehmer, L. Canning, I. C. Price, Ada Spaulding, W. H. Lincoln, Rob't Bottomly, Mrs. Clinton, Jas. R. Pitcher, Lilian B. Bird, Domination, Mrs. Cannell, Pres. Harrison, M. Boyer, Ivory, J. C. Vaughan, Mrs. F. Thomson, Puritan, Emily Dale, Advance, Kioto, Violet Rose, E. G. Hill and Mrs. Bullock. All were grand plants and models of cultivation. Opposite them on the right was the lot that won first for 12 plants in 12 varieties, by the same growers, Messrs. Halliday Bros., and to say that they were equally as good as the other lot is giving them high praise. Here was to be seen a plant of Ivory, a perfect globe in shape, and requiring 150 stakes to display the great white flowers properly. Next stood the plant that won the Bayersdorfer prize, a splendid specimen Louis Boehmer, the largest plant in the room and as perfect in leaf and stem and flower as could be wished. The only thing that the most carping critic could have desired in that plant was a clear color and of course that can not be had with Boehmer.

In the center of the hall was a mass of finely grown palms sent by Mrs. M. J. Thomas, marked "not in competition," and to the right of it were the plants that won first for 6 seedlings of '91; they were grown by Halliday Bros. and consisted of Target, a very target indeed, the bull's eye being formed of the tubes of the petals, which as well as all the reverse were fawn color, while the spatulate half of the petals was a rich crimson, L. Boehmer, Sugar Loaf, J. C. Vaughan, Waban perhaps the best new plant exhibited, clear deep pink, reflex light rose, very large size, and Clara James.

Among the plants exhibited by Mr. Jno. Donn, who took several first prizes, were grand plants of Prince Kamontsky; Mrs. Jno. Donn, a Chinese yellow, with brown pencilings on the edges; M. Panckoucke, light red anemone; Mme. Baco, a delicate pink Japanese; Maud Lee, M. C. Roffort, M. Dufosse, I. C. Price, Lizzie Cartledge, Jules Toussaint, E. Lefort and Grace Hill. As pretty a sight as the hall afforded among the plants was the group that took first for 12 single stemmed plants with one bloom. They were grown by Mr. Wm. Fraser and consisted of W. W. Lunt, Mrs. W. Bowen (the finest flower in the hall), Mattie Bruce, Elmer D. Smith, Chas. Canfield, G. F. Moseman, Annie Dorner, Lillie Bates, V. H. Hallock, John Goode, Pride of Roses and Robt. Craig.

The seedlings shown for the first time were numerous, were fine, were well grown, but were all ruled out by the judges as not being sufficiently distinct from those already known. Mr. Seidewitz claims to have a very superior one at home, but as he did not exhibit it we can only guess at its beauty and points.

Space would not suffice to describe all the exhibits that deserve it, but it would not do to overlook the premiums offered to children. Four months ago the members of the club gave away to the school children of the city 2,000 plants to be grown for the show and offered thirty premiums; they were competed for in a way that excited the astonished admira- of the club and the plants that took prizes would have been considered good plants in the body of the exhibition a few years ago.

The table decoration that received the first prize was composed of Am. Beauty roses, Cypripedium insigne and L. Canning chrysanthemums and was so good that it was the center of an admiring circle of spectators every night. The competing exhibit was so excellent that to many it seemed equally good; it was composed of Daimio chrysanthemums and adiantum fronds.

The mantel that gained first was banked on one side with tall Areca lutescens reaching to the top, the pots concealed by a mass of brilliant leaves of Japanese maple and the grate filled with the same. On the shelves were two vases of superb chrysanthemums, one Harry May, the other H. E. Widener and Domination. A spray of Asparagus tenuissimus, draped carelessly, completed a very charming effect, for which the Messrs. Halliday deserve great credit. The competing exhibits while showing beautiful work above were too heavily banked with plants below.

Messrs. Brackenridge & Co. had the only exhibit of orchids.

Mr. Jno. Cook exhibited in his new roses a seedling of his own named Mrs. Rob't Garrett, apparently a hybrid tea, in the way of La France, but as well as could be judged from the flower shown somewhat different in tint and also in the form of the flower, being more inclined to open like a hybrid perpetual.

Among the designs of superior merit may be mentioned a wreath of Bottomly chrysanthemums and lily of the valley with a pair of palm leaves lying through it, tied with broad lavender ribbon, exhibited by Halliday Bros; also a vase exhibited by Mr. Jno. Cook, standing on a high pedestal of ivy leaves and filled with drooping sprays of choice chrysanthemums. There were many, many more and all possessed some degree of excellence, but space and time fail.

The most gratifying thing about it all is the fact that it was a financial success. With the exception of the first night the weather was all that could be desired and the attendance was the same, so that notwithstanding the heavy expenses, the music, the large hall and the rest of it, we will probably be ahead a much larger sum than we were last year.

The judges were Messrs. Wm. R. Smith, Jno. Saul, Geo. Fields and J. R. Freeman, all from Washington. They had a difficult task but they acquitted themselves with honor, both on the floor of the exhibition hall and on the floor of the banquetting hall, to which they and the club adjourned after the prizes were awarded. Long may they live and may kind Providence send us as able a quartette next time. MACK.

[The awards were given on page 327 of our issue for Nov. 19.]

VIEW AT THE INDIANAPOLIS CHRYSANTHEMUM SHOW.

Milwaukee, Wis.

The experience of the florists in the management of their first show has been trying and varied, but successful in spite of all. In the first place the week proved to be unusually active in society (we hardly know of a week in which so many weddings, receptions and dinners were given), the weather was gloomy until Monday, when it cleared up, and plants came in wagon load after wagon load and by 3 p. m. the hall was like a bee hive, everyone busy and full of hope and ambition, but about 6 p. m. a blizzard struck the town and next morning everyone wore a long face with hardly ambition enough to finish their work. Later arrivals of plants and flowers came in frozen; a beautiful lot which was kindly sent up by Mr. J. C. Vaughan was ruined, which gave the committee the blues; his cut blooms, however, fared better and although damaged they made quite a show and attracted considerable interest. One of our own florists, whom we look to for fine specimens, Mr. J. Dunlop, suffered in the same way. So Tuesday, the first day, was a discouraging one; but Wednesday was warmer, visitors began coming in and as soon as the committee heard the silver jingle at the door they became inspired. The first class orchestra which had been engaged when we expected to make money helped to fill us all with enthusiasm, the crowd increased steadily day and night until Friday afternoon, when it was crowded, but that night it rained; so we began with a blizzard and ended with a drizzle of rain. With all that we came out O. K. and are more than pleased with the success of our first venture. Thousands attended, expressed themselves pleased, went home and sent their friends. The newspapers stood by us bravely, the reporters apparently eager to excel one another in their reports and illustrations.

The plants and other decorations were arranged in the hall according to a plan prepared in advance. In the center was a two-story pagoda made of chrysanthemums. The lower story, 12 feet in diameter, was made of pot plants and smilax; the second story was a wire frame covered with cut blooms. This was entered for best general display and took the blue ribbon. On three of the corners high staging was erected which were covered with plants, palms, mostly as much as two stories high. The fourth corner contained a cave, inside of which was a parlor decoration. This little nook was crowded almost all the time. The decoration seemed to attract more attention than it would if arranged out in the hall.

Some tables of large flowers attracted very much attention. Many florists who looked at them could be heard saying, "they are very well for a show, but they could not be sold," but two days after the show opened the flower stores were refusing orders for them at $1 each. One florist who succeeded in getting them sold fourteen. This illustrates what value a flower show is. One hour before closing Mrs. E. P. Sawyer of Oshkosh offered her set of cut blooms to be sold for the benefit of the Old Ladies' Home. They brought $29. Mr. J. C. Vaughan and Pitcher & Manda gave theirs for the Emergency Hospital. They brought $17. The way those single blooms were taken up at from 20 cents to $1.30 each opened the eyes of some florists who say it don't pay to grow them for more than 50 cents a dozen. Mr. Chitty's carnations arrived

24 hours late, but were beautiful and received a certificate of merit, the prizes having been awarded day before. Mr. Dorner's beautiful Ben Hur met the same fate, also the White La France and Mme. Pierre Guillot roses of Messrs. C. Strauss & Co.

The members of our club felt much complimented by the appearance of Mr. John Thorpe and Mr. J. A. Pettigrew, of Chicago, and when they both joined in the labor of judging the plants and flowers we felt more grateful than is easy to express.

The premiums were awarded as follows: Display of plants, not less than 20 varieties, 1st C. Valom; 2d Currie Bros.; 3d H. Haessler, also certificate of merit for careful arrangement. Twelve varieties, 1st H. Haessler, 2nd G. W. Ringrose. Six varieties, 1st Currie Bros., 2d H. Haessler, 3d J. Freytag. Six white, 1st C. B. Whitnall & Co., 2d A. Middlemass, 3d F. Freytag. Six yellows, 1st C. B. Whitnall & Co., 2d A. Middlemass, 3d B. Gregory. Six pink, 1st C. Valom, 2d B. Gregory, 3d J. Dunlop. Six red, 1st J. Dunlop, 2d G. W. Ringrose, 3d C. Valom. Specimen plant, Pitcher & Manda. Best general display, 1st C. B. Whitnall & Co., 2d C. Valom, 3d A. Middlemass.

Cut blooms: Best collection cut sprays, 1st Currie Bros., no competition. Best 25 varieties, one bloom each, 1st James Lewis, Oshkosh, Wis.; 2nd Pitcher & Manda. Most artistic arrangement of cut blooms, 1st C. B. Whitnall, 2d Currie Bros.

In cut roses first premiums were awarded to H. Stapes for Mermets, Brides, Gontiers and best collection; to B. Gregory for La France; to Currie Bros. for Perles; certificate of merit to C. Strauss & Co. for White La France and Mme Pierre Guillot.

In carnations Currie Bros. were first for 25 pink, 25 scarlet and best general display; H. Stapes for 25 whites; a special premium to B. Gregory for a fine pink variety; certificate to H. E. Chitty for display of carnations and to F. Dorner for carnation Ben Hur. For 100 violets, first to J. Dunlop.

Best arranged basket, any style, 1st C. B. Whitnall, 2d W. Edlefsen, 3d C. Baumgarten. Best box cut flowers, 1st Wm. Edlefsen, 2d A. Klockner, 3d Currie Bros. Best arranged vase of flowers, 1st Wm. Edlefsen, 2d C. B. Whitnall & Co., 3d F. P. Dilger. C. B. W.

Racine, Wis.

The chrysanthemum show given here under the management of Florist F. Fountaine was a very creditable one, though the first ever held in this city. The plan upon which it was conducted is worthy the consideration of many other enterprising florists in cities not large enough to boast of a florist club.

In early spring he issued a neat premium list, containing also a price list of cuttings of the principal varieties of chrysanthemums; competition open to amateurs only. In this way much interest was excited and many cuttings were purchased and grown for competition. He took care to grow a fine lot himself to make the display effective. He got the ladies of his church interested, and they were of material assistance.

The display was effectively arranged. A table was handsomely decorated with plants and flowers, and here ladies in Japanese costumes served tea. Music added to the attractions of the exhibition.

From what I saw and heard I am sure that the flower lovers of Racine already appreciate the efforts of their florist in a way that will well repay him for the trouble and expense incurred.

C. B. W.

Erie, Pa.

The annual exhibition of the Erie Chrysanthemum Club drew out a large attendance and the splendid display was very greatly appreciated. The use of decorative plants as a foil to the chrysanthemums greatly increased the beauty of the display.

In the chrysanthemum plant classes Messrs. H. A. Niemeyer and H. Tong took all the prizes, Mr. Niemeyer taking 6 firsts and Mr. Tong 3.

In chrysanthemum cut blooms Messrs. Tong and Niemeyer also made a clean sweep, Mr. Tong receiving 7 firsts and Mr. Niemeyer 2.

In miscellaneous plants firsts were awarded to Wm. Honeysett for 12 geraniums, specimen geranium and 12 coleus; to Mrs. W. Niemeyer for begonias; to H. Tong for 50 greenhouse plants; to H. A. Niemeyer for 12 palms.

Of the first premiums awarded for floral arrangements Mr. H. Niemeyer received 4 and Mrs. W. Niemeyer 3.

A number of premiums were awarded to amateurs.

In quite a number of cases first premiums were withheld on the ground that the exhibits were unworthy of same and in a few cases even second was withheld.

Hartford, Conn.

The annual chrysanthemum show of the Hartford County Hort. Society was an excellent collection of exhibits. Though the plants were not as large as last year the display was very creditable and the show of blooms was especially fine.

In plants first premiums were awarded to J. H. Bardain for fifteen, six, specimen white and specimen pink; to James Smith for specimen Japanese, specimen Chinese and specimen pompon; to B. E. Beemer for three standards; to A. N. Pierson for 10 single flowered in 6-inch pots; to James Smith for seedling of 1891.

In cut blooms A. N. Pierson received firsts for twenty-five, ten, twenty cut sprays, twelve yellow, twelve pink and twelve white; B. E. Beemer for one specimen bloom; Paul Marchand for cut bloom from seedling of 1891. For 12 cut roses B. E. Beemer was first.

Diplomas were awarded to A. N. Pierson for largest number of new varieties; to Brown, Thompson & Co. for designs; to Pitcher & Manda for specimen cut blooms.

AURORA, ILL.—The chrysanthemum show and floral exhibition given by the ladies of the Park Place Baptist Church Nov. 10 to 13 was in spite of the unfavorable weather a success both financially and in the display of plants and flowers. The decorative plants displayed by M. R. Saunders were a credit to the grower. Messrs. Reese & Son, Tilton Bros. and Mr. Budlong deserve special mention for foliage and decorative plants. The display of chrysanthemum plants was excellent. Every visitor was surprised at the fine showing made by the florists and amateurs of the city. Reese & Son, Tilton Bros., Budlong and M. R. Saunders each received premiums and H. G. Gabel, amateur, was awarded many first premiums. All the plants showed care and skill on the part of the growers. In the cut flower department the Am. Beauty roses exhibited by Mr. Saunders were the favorites of all. The carnations and chrysanthemum blooms were also very fine.

ATLANTA, GA.—The annual chrysanthemum show was the finest ever given by the Atlanta Hort. Society. It was held in the rotunda of the state capitol. The display of plants are very large and of unusually fine quality. The principal exhibitors were J. E. Jackson of Gainesville, and Messrs. James Burpitt, C. A. Dahl & Co., and E. Wachendorf. There were many other displays, including one of cut blooms by Julius Martin of Little Switzerland. Of the first prizes for chrysanthemum plants and flowers, James Burpitt received 5, J. E. Jackson 2. Julius Martin received first for best new varieties. E. Wachendorf three 1sts for palms, begonias and pot chrysanthemums. C. A. Dahl & C., 1st for best floral decoration, best cut roses and best bouquets. Mrs. L. D. Carpenter, 1st for ferns. The society will hold a bulb show next spring

LYNN, MASS.—The Houghton Horticultural Society's chrysanthemum show surprised everyone by its excellence. The display was very fine. Of the prizes awarded, S. H. Davenport received 1sts for collection of named varieties in 10-inch pots, 6 in 8-inch pots, largest flower and best 26 blooms of Chinese varieties; James F. Marble, for 12 in 8-inch pots; E. A. Richards, for single specimen plant; J. C. Rogers, for 26 blooms of Japanese varieties. Gratuities were awarded to W. S. Ward, of Salem, for fine display of Japanese varieties; S. P. Buxton, of Peabody, collection of named varieties; Wm. Miller, 12 varieties; Thos. Roland, of Nahant, specially fine blossoms; Chas. Fohn, Nahant, specimens Lincoln variety; E. G. Blaney, Jr., honorable mention for two vases of flowers; E. A. Richards, honorable mention for bouquets.

BRIDGETON, N. J.—There was a very creditable display at the second annual chrysanthemum show held in the First Presbyterian Chapel. Robert Scott & Son, of Philadelphia, made a splendid display of cut blooms, in addition to the plants and flowers shown by local growers. W. H. Henderson of Cedarville received 1st prizes for best collection of pot plants and best collection of cut sprays in vases; Richard Bagg, 2d in the last-named class. In carnations, S. Edwards & Son were first. Prizes were also awarded to amateurs and for the best plant shown by a scholar in the public schools. It was decidedly the best display of flowers ever seen here.

SCRANTON, PA.—The fourth annual chrysanthemum show, given by Florists G. R. Clark & Co. at the Armory, was the finest display of the kind ever seen here and was visited by a large number of people. It was liberally praised by the local press and there can be no doubt that Messrs. Clark & Co. will be well repaid for their enterprise. At the meeting of the County Teachers Association, held during the exhibition, a prize of $10 was offered for the best essay on the chrysanthemum show. There were five competitors. The prize essay was a condensed but very graphic description of the exhibition.

ROCKFORD, ILL.—The chrysanthemum show given under the auspices of one of the local churches was quite an event. There was really a fine display, the principal exhibitors being Florists J. J. Soper,

H. O. Hinkley, H. W. Buckbee and Mr. W. S. Hizer. The first prize for "best display and variety" was awarded to J. J. Soper. Mr. J. C. Vaughan of Chicago displayed 22 different varieties, containing many of the newer sorts, which were much admired.

NORRISTOWN, PA.—Florist E. Metcalf's annual chrysanthemum display was attended by a large number of people, and was much praised by the local press. He charged an admission fee of 10 cents, giving in exchange therefor a ticket which entitled the holder to a credit of 10 cents on a purchase of $1 worth of flowers or plants bought during the show. He exhibited many seedlings of his own that promise well. Small prizes were offered, to be competed for by amateurs only.

NASHVILLE, TENN.—The chrysanthemum show given by the Evergreen Lodge Gardens of Clarksville, of which Mr. James Morton is manager, under the auspices of the Davis Monument Association, was very successful. Many very fine plants and flowers were shown and the association added about $1,000 to its fund. Joy & Son of this city also made an excellent display both at their city store and at the greenhouses.

FREDERICK, MD.—The chrysanthemum show was very successful and as one of the results the Frederick Floricultural Society was organized at the close of the exhibition. The officers elected for the ensuing year were Dr. Wm. H. Baltzell, Pres.; L. E. Mulinex, Vice-Pres.; Harry C. Keefer, Treas.; C. Edward Kemp, Sec'y. A committee was appointed to draft a suitable constitution and by-laws.

HARRISBURG, PA.—There was a very creditable display at the chrysanthemum show given by the Ladies' Advisory Committee of the Y. M. C. A. Fine displays were made by James Boyd, Major Bent, Senator Cameron and Florists Schafmeister, McClintock and Brenneman. Cut flowers were also shown by Mr. Wilbur of Bethlehem and Mr. Graham of Philadelphia.

SAGINAW, MICH.—This city was blessed with two chrysanthemum shows this year. One was held at Germania Hall, and was conducted by Florist William Roethke, and the other was at Arbeiter Hall, conducted by Florists A. Grohman & Sons, J. B. Goetz and Mrs. G. Waldbauer. Both displays were very creditable and received much praise from the local press.

DANVILLE, ILL.—Florist Frank B. Smith had over 350 varieties of the chrysanthemum at his exhibition at the Armory, including standards, single stem and large pot plants. He also made a fine display of cut blooms, including new varieties of 1891, some of which measured 10 inches in diameter. The display was admired and praised by every visitor.

AUGUSTA, GA.—The chrysanthemum show was far ahead of any previous effort in this line in this city. D. B. Woodruff took most of the prizes for chrysanthemum plants and flowers and P. J. Berckmans those for palms, agaves and coniferous evergreens. There was also a generous list of awards to amateurs.

LANCASTER, PA.—The chrysanthemum show held by the Ladies' Auxilliary of the Y. M. C. A. was attended by over 1,200 people and was a decided success from every point of view. One of the principal attractions was a beautiful display of cut blooms from Rob't Craig of Philadelphia, including many new kinds.

WILMINGTON, DEL.—The chrysanthemum show while not as elaborate as it might have been was a very fair display. Brown & Co. received the larger part of the premiums, the remaining prize winners being L. E. Baylis, Geo. W. Brinton, Harry Potter, C. E. Sparks, Herman Wolff and H. Hannum.

WALLINGFORD, CONN.—The annual chrysanthemum show of the Ladies' Library Association was a very beautiful display. Florist G. H. Rowden's collection was the largest. The competitors for prizes were all amateurs. The judges were Messrs. Robert and Archibald Veitch, of New Haven.

PITTSTON, PA.—Pittston is in the procession, and indulged in the luxury of a chrysanthemum show. Eight hundred plants in 150 varieties were shown, and the local press says the exhibition equalled those in much larger places. Certainly a good start was made.

KNOXVILLE, TENN.—The chrysanthemum show was very successful. The majority of the prizes were awarded to Messrs. T. M. Davenport and H. W. Richardson & Co. There is a movement on foot to organize a horticultural society here.

PORTSMOUTH, N. H.—A display of chrysanthemums from the conservatories of local amateurs was made at one of the churches during the height of the chrysanthemum season. So we have had our "chrysanthemum show."

WILLIAMSPORT, PA.—Florist Harry Chaapel gave his usual annual chrysanthemum show, and it was largely attended. The local press said many kind things about the beauty of the display.

LOS ANGELES, CAL.—The chrysanthemum fair was the most successful ever given here. The principal prize winners were the Highland Park Nursery, Oriental Nursery, L. J. Stengel and C. H. Hovey.

DURHAM, N. C.—Durham is in the swim and had its chrysanthemum show just as well as the rest of them. And it was a very creditable display too, though all the exhibitors were amateurs.

SAN JOSE, CAL.—The annual chrysanthemum show was more successful than ever before.

ASHEVILLE, N. C.—Plans are being made for a chrysanthemum show here next year.

Chrysanthemum Names.

EDITOR AMERICAN FLORIST:—You will please find herewith two more lists of names selected for chrysanthemums. The first received is from Messrs. Peter Henderson & Co., and is as follows:

Golden Wedding.
Autocrat.
Grenadier.
Tiger.
Pin-Wheel (we have had flowers which were said to resemble, or rather remind one of pin wheels, but the name has not been registered, nor is it in the English National Chrysanthemum Society's official catalogue).
Gettysburg.
Patrick Barry, (is said to resemble W. A. Manda).
Good Gracious.
Wm. Falconer. (This name was in use before for a single variety, raised and distributed, I think, by Messrs. Hallock & Thorpe some years ago; but as it cannot be found in any of the current catalogues, it is accepted. This is a sport from Louis Boehmer. It will be more popular than its parent on account of the color, which is a delicate shade of pink).
The Stranger.
The Blonde. (One named Blonde Beauty is in the English Chrysanthemum Society's official catalogue).
Mark Twain.
Polo.
Philadelphia.
Fire-brand.
Ella May.
Mrs. I. Forstermann.
Surprise.
Faultless.
Mrs. F. Schuehardt.
Indian Chief.
Julius Roehrs.
Evening Glow.
Popularity.
Goldfinch.
David Rose.
Majesty.

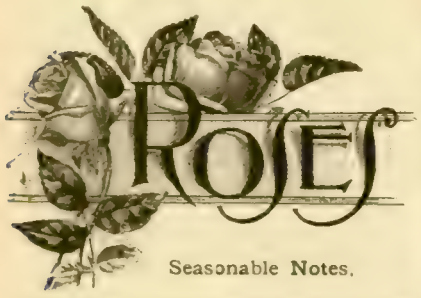
One name sent in by Messrs. Henderson I found in the official catalogue of the N. C. S. of England, so it will be necessary to select another name. This I hope will be a hint to other disseminators to first consult all available literature on nomenclature of the chrysanthemum before sending in the list of names for registration.

Mr. J. C. Vaughan also sends a list to be registered. Four in the list sent have already been adopted. Some of the names are in the above, but as Messrs. Henderson's list was received first, their names take precedence.

King's Daughter.
Tinted Venus.
W. J. Stewart.
E. V. Hallock. (This must not be confounded with V. H. Hallock).
Golden Gate.
Rudyard Kipling.
Timothy Hopkins.
Thomas Wallis.
Carrie Pierce.
Helen Wait.
Charlotte Lester.
Mrs. Gallup.
Avery Gallup.
Mrs. A. H. Bunde.
Margaret Ferry.

It would be better if brief descriptions as to the types to which they belong, and the colors, were forwarded with the names.

We may look for other sports from Louis Boehmer as I have received another name for registration for a variety which originated in the same way as "Wm. Falconer" (reported by Peter Henderson & Co.), and is described as a delicate pink.



EDWIN LONSDALE,
Sec'y Am. Chrysanthemum Society.

American Carnation Society.

Mr. C. W. Ward of East Moriches, N. Y., has registered Scarlet Ray and Zebra. Mr. John McGowan of Orange, N. J., registered the following: Iago, New Jersey, Katherine Storrs, Old Rose, Pride of Essex and Purple Beauty.

A. M. HERR, } Com. on
C. J. PENNOCK, } Nomenclature.

WHEN you write an advertiser tell him that you saw his advertisement in the AMERICAN FLORIST.

Seasonable Notes.

Now that the chrysanthemum shows are over, growers will need to turn their attention to other crops, and, among other things, roses will need some immediate attention, particularly from those who have not given them as much care as they might in the past few weeks, as, I doubt not, many in the rush of show business have allowed the weeds, etc., to make some headway. Where such is the case no time should be lost in getting them cleaned of all weeds, dead or decaying leaves, and where the surface shows any tendency to become green, it should be carefully rubbed over. When slightly on the dry side and where needed a little more mulching should be added, just enough to keep the soil from becoming bare. If the manure is somewhat exhausted, a very thin dressing of pure ground bone before putting on the mulching will help them to produce quick root action, and thereby induce stronger growth, which in the very near future will produce larger and better quality buds.

For beds and benches newly planted this season I do not advise liquid manure until the days begin to lengthen and the sun gets considerably stronger; but where the old plants have been carried over in the same position a good watering with weak, clear liquid manure once in about every two weeks will greatly help them. But care must be taken to have the soil in a proper condition before applying it by getting it slightly on the dry side. There can be no exact rule laid down for the time or day to apply it, because the condition of the weather and the soil must be studied so as to be sure the plants, or rather the soil, is in the right condition before using it, because if it is not, more harm than good will result from its use. These and other small details are really the whole foundation of success.

The weather will be such now that a steady fire heat will be required all the time. This, with a small amount of sulphur on the pipes, will effectually keep mildew away, but black spot is not so easily banished. The best preventive of this disease I have yet found is to avoid all surplus moisture at night. By watering early in the day and giving air liberally all the surplus moisture gets dried up before night, leaving the atmosphere of the house in a nice, healthy condition.

As soon as green-fly shows itself apply tobacco in some form, either as vapor, smoke, or fumes, from the stems scattered over the floor, whichever way has been found the most desirable. Do not wait until the fly has almost smothered the young growths, for such a condition means considerable loss of vitality to the plants.

Keep the night temperature as near 56 as possible, allowing it to rise gradually in conjunction with air during sunny days until it reaches 78° to 80° with plenty of air in the middle of the day, and if you wish to keep the plants healthy do not allow the temperature to exceed 66° to 68° without putting on some ventilation. There should be no deviation from this rule. On cloudy days it pays to make the maximum heat 65°. JOHN N. MAY.

New York.

The sensation of the week is the consolidation of the two wholesale cut flower establishments, Thos. Young, Jr., and John Young. The two brothers have kept up a hot competition for the past year, but have rightly come to the conclusion now that in union there is strength and have agreed to bury the hatchet, forget the differences which caused their separation and unite against the common enemy, as it were. Both of these gentlemen are popular and have had a thorough business experience and the new concern is sure to get its full share of the New York trade.

Burns & Raynor's new store at 49 West 28th street is getting into shape now and is the ideal place for a cut flower business, large and with abundance of light.

Cut flower trade continues brisk and now that chrysanthemums are beginning at last to decline the prospects for the rose and carnation men are first rate. American Beauty and violets continue at the top notch. The quality of the latter is improving greatly. The amount of funeral work done by Thorley, Fleishman, Hafner and other florists for the actor Florence was enormous. Quite a lot of flowers were also sent on from Boston and other cities.

The Madison Square Garden Co. are making preparations to pay out the premiums awarded at the chrysanthemum show. $5,775 of the amount is in money premiums and $875 in cups.

First prize for best vase of chrysanthemums was won by Jas. Brydon, not Geo. Stumpp, as previously stated.

Mr. August Rolker, who has just returned from a recreation trip across the Atlantic, speaks in high praise of the new German Lloyd route from New York to Genoa, he having been a passenger on the first trip of the "Fulda" on that route. The scenery he describes as being far superior to that seen on the old steamer routes, the course passing through the Azores, past Cape St. Vincent, Gibraltar, the Balearic Islands, the Riviera in full view of Nizza, Monaco, Monte Carlo, San Remo and the snow-capped Alps. For those travelling in the winter months he recommends the trip highly, the passage eastward especially having been as pleasurable as a trip on the Hudson, although the boats on the northern routes were at the time experiencing exceedingly rough weather.

Mr. Rob't M. Grey, formerly of Pittsburg, Pa., has been engaged to take charge of the orchid and choice plant houses of Mr. Henry Graves at Orange, N. J. Mr. Grey is a son of Wm. Grey, the well known gardener at Mr. Erastus Corning's at Albany, and a brother of Benj. Grey, of aquatic fame, at Malden, Mass., is well equipped with horticultural and botanical knowledge and is just the man for the place.

There will be another big trade sale of "Florists' orchids" from Sander on Thursday, Sept. 10.

Boston.

Thanksgiving week has been a very prosperous time for the florists. For the first time in several years the holiday and the days immediately preceding it have been all that could be desired as to the weather. One florist says that when you can leave the store door open so people can see in it makes more difference in the amount of transient trade than anyone would imagine. Flowers of all kinds were sold out clean both with the wholesalers and the retailers. The day before Thanksgiving day the demand was especially brisk and the market was literally cleaned out. Violets were in great demand and there were not enough to go round. On Thanksgiving morning, however, the call for violets was unexpectedly light and many of the stores were left with quite a little stock of them on hand.

Chrysanthemums are on the wane. The best obtainable now are none too good and will keep but a little while after being brought in. Roses are in good quality and improving every day. Carnations are also first class and appear to have fully recovered from the set back they experienced in September from the warm weather. Roman hyacinths and paper white narcissus are now in market, also a fair supply of callas. Stevia is also beginning to appear. Lily of the valley is more plenty. Galvin's window is decorated with cypripediums and Adiantum Farleyense, a welcome change from the monotonous mountains of chrysanthemums which have pre-empted every inch of space in the florists' windows for the past month.

E. M. Wood & Co. are sending in quantities of Waban roses from their Waban Conservatories. As they grow it, no one can find any fault with this rose.

There have been several notable weddings the past week in which decorating was done extensively, especially in the churches.

Jackson Dawson and his good lady celebrated their silver wedding on Tuesday, Dec. 1. Quite a number of their gardener and florist friends were present and helped them to celebrate in old fashioned style.

Chas. Ingram, formerly of McGregor & Ingram, has gone to the employ of Mr. W. H. Proctor, Reading, where they expect to build up a good local florist trade.

Fisher Bros. have just added another hundred foot house to their establishment at Montvale. Frank Becker has also added two houses to his already large place at Cambridge.

On Friday, the last day of the chrysanthemum exhibition, the attendance was the largest ever recorded on any one day at an exhibition in Horticultural Hall.

Geo. W. Wilson of Malden, the well-known old-time Bon Silene and Jacq grower, is reported as very sick.

Chicago.

Thanksgiving trade this year was hardly up to expectations. The trade of most of the dealers was quiet. While a few report a satisfactory business the concensus of opinion seems to be that trade was lighter than in former seasons. The stock was fairly plentiful, but not of a very high grade. American Beauties were in large demand, with but a very small supply. Outside of Beauties there were plenty of roses to supply the demand. For the first time in a number of years the prices were not advanced to any marked degree. An average advance of about $1 per hundred was asked by the commission men. The same may be said of long stemmed carnations. Stock plentiful excepting bright red, which were rather scarce. No advance in prices. There was a heavy demand for violets, but as these flowers are so very scarce it

ARRIVAL OF THE OLD PLANT OF CATTLEYA LABIATA AT ST. ALBANS, ENGLAND.

cut but a small figure in the Thanksgiving trade.

Chrysanthemums still hold their own, although from present indications we shall see the last of them in about a week. Roman hyacinths are coming in very freely, but do not sell any too well. The trade for the balance of the week was unusually quiet.

Mr. John Thorpe is off on a trip through the east in the interests of the Floricultural Division of the World's Fair.

Reinberg Bros. have removed to 51 Wabash avenue.

John Lietzau & Bro., the florists at the corner of Webster and Sheffield avenues have been closed by the sheriff.

"Wells, florist," is the sign on a new floral store at 280 North Clark street.

E. J. Harms has sold out his wholesale business to John Bruckner and has opened a retail store at 113 and 115 State street.

A special meeting of the Florist Club has been called to consider the advisability of a spring exhibition on a plan presented by the Horticultural Society.

Mr. J. A. Pettigrew has been having trouble with his eyes and was for a while confined to the house, but is now able to be about again. But he will have to wear glasses for several years.

Mr. M. F. Gallagher is about again after an illness that confined him to his bed for several weeks.

Mr. Paul Berkowitz of Bayersdorfer & Co., Philadelphia, paid the florists a visit last week.

Mr. Frank Huntsman came up from Cincinnati and enjoyed Lake Michigan's breezes one day last week.

Philadelphia.

Mr. H. F. Michell, the genial secretary of the Florists' Club, has resigned from the service of H. A. Dreer, where he has been for a long time, to engage in business for himself. He has purchased the stock and fixtures of W. H. Smith, the seedsman who recently failed. The store, on Market above Tenth, is in a good location. With Mr. Michell's experience and original ideas he will no doubt be able to build up a large business. We wish him success.

Roses are fairly plenty, with the exception of La France, which is scarce, the first crops seeming to be all cut out. John Burton is sending in some very nice Wabans, the best specimens we have seen of it so far. With quite a number of growers the complaint is the green centre, something like a "bull head" Bride. Prices are about the same as last week. There are not enough American Beauties to go around.

Chrysanthemums are on the wane. A great many were used for Thanksgiving trade. Almost all the growers are cut out except W. K. Harris, who has a fine lot of late varieties.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

Cattleya Labiata.

The rediscovery of this valuable cattleya and its introduction to commerce in quantity after having been a rarity for so many years has created almost a sensation among orchid growers and the accompanying illustration of the arrival of this cattleya in England will be of interest.

We'll Send Them Bowling Along!

BY JAMES D. LAW, CAMDEN, N. J.

[*Sung at the Chrysanthemum Supper of the Florists' Club of Philadelphia. Air: "Marching Through Georgia."*]

When Time falls in with Flora, and calls upon the Dame
To name the favored few to pass within her house of Fame,
The Philadelphia Florists' Club shall enter with acclaim—
They'll all go bowling along!

The first is *Craig*, the President, chuck full of Go and Grit,
At everything he undertakes he makes a ten pin hit,
The Chief of Scottish Chieftains, an Orator and Wit,
So we'll send him bowling along!

CHORUS—
Hurrah, hurrah! The daisy boys are we!
The *Quaker City Florists' Club* of ancient pedigree,
Throughout the States and Canada from ocean clear to sea
Our Fame goes bowling along!

There's Secretary *Farson*, a brick in word and deed,
He should have been a Parson, as all the boys concede,
He dares to be a *Daniel*—and the friend of Dr. Reed,
So we'll send him bowling along!

And then there's Captain *Anderson*, whose vile sulphuric fumes
Would give Destroying Angels points when breathed on bugs and blooms,
And yet our Champion Bowler's face Benignity illumes,
So we'll send him bowling along!

There's *Edwin Lonsdale*, Duke of York, from public gaze he shrinks
And yet none better knows the ropes and all the quirks and kinks,
The Pink of Floral Presidents, the President of Pinks,
So we'll send him bowling along!

And then there's *George C. Watson*, his words so smoothly jibe,
He has been styled the Barnum of all the Flowery tribe;
He's prompt, progressive, practical—a sweet, seductive scribe—
So we'll send him bowling along!

There's *Westcott*—pushing "get there" *John*, with steam in woudrous store,
The more he finds there's work to do he always works the more,
The King of dandy fishermen, the Waretown Commodore,
So we'll send him bowling along!

And then there's *Thomas Cartledge*, who counts and keeps the cash,
And with financial skill averts a monetary crash
He has not yet for Canada thought fit to make a dash,
So we'll send him bowling along!

And then there's twice bless'd *Harris*, the Deacon and the Bard,
His sermons and his ready Rhymes are held in high regard,
And Glory everlasting will be his sweet reward,
So we'll send him bowling along!

There's *Burton*, Legis'ator *John*, the Boodler and the Boss,
And tho' his words are coated now with diplomatic gloss,
He takes a turn among the boys when lesser cares engross,
So we'll send him bowling along!

There's *David Bearn*, the batchelor, who keeps the Cameron gold,
His state of single blessedness is painful to behold,
But Davie he's a Thistle of the classic Scottish mold,
So we'll send him bowling along!

And then there's bright, electric *Bob*, progressive Bowler *Kift*,
He's in the swim without a doubt, however winds may shift,
A Prestidigitator with a true Poetic gift,
So we'll send him bowling along!

And then there's *Charlie Evans*, the Brummel of our Beaus,
The sponsor of "Her Majesty" and many a famous Rose,
We learn his lease of single life is drawing to a close,
So we'll send him bowling along!

There's long-legged *William Colflesh*, who lives upon a hill,
The one and only rival of our rhyming deacon Bill,
The last remaining friend of "Jacque," whose fame is living still,
So we'll send him bowling along!

And then there's Piper *Nisbet*, with tartan plaid and kilt,
Oh, what a burst of melody is bunched above his belt,
The very incarnation of a Florist and a Celt,
So we'll send him bowling along!

And then there's *H. H. Battles*, with deep discerning mind,
At Painting and at Criticism he leaves the boys behind,
His aid is freely given to assist the color blind,
So we'll send him bowling along!

And then there's Drexel's *Vernor*, he's always in the game,
And with his plants and prizes extends the Drexel fame;
At every show an easy first the judges all proclaim,
So we'll send him bowling along!

And then there's *Richard Heron*, a stalwart to the core,
An adept at the Alley Pins, and crammed with flowery lore,
And yet withal a fighting bird that few can stand before.
So we'll send him bowling along!

And then there's *Hughes* the Welshman, who sings his country's songs,
We've seen his fine Caladiums admired by countless throngs,
For Wootton Mangel-Wursels too, the prize to him belongs,
So we'll send him bowling along!

There's *August Lutz*, whose august looks his worth and weight attest,
He has been dubb'd Chief Magistrate by Deutchers of the West,
And well we know Trans-Schuylkill folks will only take the best,
So we'll send him bowling along!

There's *Baker*, in his element when head first in a brawl,
His speech is now but little else than one long caterwaul,
Yes, Bake's a chronic growler, but a good old soul for all,
So we'll send him bowling along!

There's *Heacock* next—Carnation Joe—it was his wish and will
To have a Floral Market once—'twould surely fill the bill,
But here he lives and totes around his little basket still,
So we'll send him bowling along!

And then there's *Huster*, of Girard's, thro' all the land he's known,
He's far too fine a gentleman to pass his days alone,
We hope he'll be surrounded yet with Boys he cal's his own,
So we'll send him bowling along!

And next there's *Charlie Longinette*, who never makes a break,
For every form of gentleness he fairly takes the cake,
The only Bowler in the Club that makes the Captain quake,
So we'll send him bowling along!

And then there's budding Bowler *Craig*—the hermit *George* of yore,
The prompt and active secretary of the Bowling corps,
No flies on him—he's set his mind on piling up his score,
So we'll send him bowling along!

And then there's *Isaac Kennedy*, with Herculean powers
An extra fine authority on Bowling and on Flowers,
We're glad indeed to point him out and claim the boy as ours,
So we'll send him bowling along!

And then there's *Harry Michel*, and he's a hustler too,
The Secretary of the Club with always lots to do,
But "every little helps" you know, to pull a fellow through;
So we'll send him bowling along!

And then there's Teuton *Charlie Fox*, a sprightly sort of sprout,
His decorations are the best without a shade of doubt,
He's quite a nimble quadruped to be so very stout,
So we'll send him bowling along!

And then there's *Campbell*, he's a youth of bouquet-making fame,
He'll make the Growers hus le now, and make himself a name.
To make the best, his motto is; to give the best, his claim,
So we'll send him bowling along!

The next's a rara avis of countless kin and kith,
And he's a plant that never shows a poverty of pith;
Plain *John* to us, he claims descent from Pochohontas *Smith*,
So we'll send him bowling along!

And then there's *Harry Standen*, tho' single armed and small,
Because his fine Chrysan hemums have always got the call,
He would not miss a single show, tho' Heaven itself should fall,
So we'll send him bowling along!

And then there's *Chester Davis*, who hits Jim Vernor hard,
And Landscape Gardener *Charles Sim*, a veteran, bronzed and scarr'd,
And *Griffin* and *Allburger*, their march can none retard,
So we'll send them bowling along!

There's brother *Ball* from Holmesburg, with voice as sweet as balm,
A cyclopædic business man, collected, cool and calm,
And when it comes to raising plants he bears away the palm,
So we'll send him bowling along!

There's *Gibson* and there's *Andre*, from Doylestown they report,
And in the good old county Bucks, they grandly hold the fort;
Their fame will live for years to come, though of the mushroom sort;
So we'll send them bowling along!

There's *Albert Herr*, of Lancaster, a rising young ster he,
Carnations are his specialty, as all the boys agree;
And some predict, in course of time, with ease he'll top the tree,
So we'll send him bowling along!

And then there's *Isaac Sailer*, who dearly loves a joke,
And tho' some say his labors all terminate in *smoke*,
As donor of a yearly prize he makes a masterstroke,
So we'll send him bowling along!

And then there's *Smith*, of Washington, to him the country turns
For what is best in Botany and what is best in Burns,
His name will live, with sun flowers linked, till Time itself adjourns,
So we'll send him bowling along!

There's *Thorpe*, a youth at fifty-one, we note his vacant chair;
As grower of Chrysanthemums he's King, the boys declare—
The Chief of Floricul ure at the World's Columbian Fair,
So we'll send him bowling along!

There's *Stewart*, who wields a ready quill, a fault we can condone,
As Writer and as Specialist but few are better known;
The genial, shrewd Bostonian and "the Florists' Telephone."
So we'll send him bowling along!

And then there's Presidential *Dean* who makes conventions whizz;
"Remember, Boys, that Bowling now must never mix with biz"—
He coined the famous phrase himself and all the fame is his,
So we'll send him bowling along!

And then there's *Jim* the *Penman*, a man whose fame extends,
Thro' every land and every clime to earth's remotest ends,
The Gardeners' Doctor Johnson and the Florists' Friend of Friends,
So we'll send him bowling along!

And then there's *Charlie Weathered*, the genial and the just,
A ne-plus-ultra Green-House man, in whom we all can trust,
He hopes to raise a whisker and "his boilers never bust."
So we'll send him bowling along!

There's Bowler *Rochrs*, from Gotham, the Captain of his team,
And Indian Jungle *Forstermann*, in Orch'ds he's supreme;
Yes, all the crew—from first to last—are held in high esteem,
So we'll send them bowling along!

There's *William Albert Manda*, a youthful sort of sage,
A master of the secrets concealed in Flora's page,
Enthusiastic Botanist and marvel of his age,
So we'll send him bowling along!

And then there's *Ernst Asmus*—he reached the top they say
Embower'd among the roses with *John* New Jersey *May*,
There's *Bogan* and there's *Haman* and dandy boys are they,
So we'll send them bowling along!

And then there's Bloomsburg *Dillon* and genial *Moses Rice*,
La Roche and *Stahl* and immortelle immortal *Eugene Weiss*,
To give the names of all the boys a week would not suffice,
So we'll send them bowling along!

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By a young man, age 24; large experience in greenhouse plants. Speaks French, Flemish and little English. Good references. Address
ART DEMEYER, Porte Anvers, Ghent, Belgium.

THE VALUE of elaborate displays of their goods at such times as effective displays can readily be made, as an advertisement of their business, is fully appreciated by many of the florists, and during the chrysanthemum season now closing such displays have been more numerous than ever before. And some are supplementing these displays with printed invitations to the same that show much originality and good taste. Among those we have received and that are worthy of special mention is one issued by Mr. W. J. Laing of Toronto. It is a neat folder, on the outside page of which was the inscription "Queen of Autumn at Home Thursday, Friday and Saturday," and attached to the cover with a bit of ribbon was a small chrysanthemum and a frond of adiantum. On the right hand inside page was the invitation. The invitation issued by Mr. J. M. Gasser, the Cleveland florist, to the display at his store Nov. 19 to 21 is also unique. It is printed on celluloid and at one side appears a gilt vase of pink, yellow and bronze chrysanthemums excellently done in color.

THE printed proceedings of the Toronto convention of the Society of American Florists has been received from Secretary Stewart. It is a handsomely gotten up volume of 164 pages, finely printed and full to the brim of valuable and interesting essays, discussions and reports. It is a credit to the society and illustrates as vividly as anything can the progress the society has made, the work of real practical value that it is doing and the power that it possesses to carry forward to a successful issue what it undertakes. Secretary Stewart is entitled to much credit for the handsome appearance of the volume typographically. It bears evidence of much conscientious, painstaking work and close reading of final proofs.

ANOTHER lot of carnation flowers has been received from Messrs. Hill & Co. Among them were Creole, very dark crimson; Ben Hur, light pink; Gypsy Queen, a still lighter shade of pink than the preceding; M. A. Hunt, very similar to the last named; Salmon Queen, a very beautiful shade of salmon; Indiana, light pink striped with a darker shade; Edna Craig, a very light pink (a beauty); Hoosier, scarlet; Attraction, very bright scarlet and petals deeply fringed, a strikingly beautiful color and one that will "take"; Mrs. Hitt, deep pink; Christine, pink, almost white; White Dove, a fine white, deeply fringed, a beautiful flower.

THE SEASON for hard firing has arrived, and with it the usual crop of reports of greenhouses damaged or destroyed by fire. An ounce of prevention is worth many pounds of cure. You know where fires in greenhouses originate 99 times out of a hundred, and you know where to put the ounce of prevention. If you have taken proper precautions, you have something better than fire insurance, and if you haven't taken them no responsible insurance company will sell you a policy.

MR. AUGUST ROLKER has returned from Europe in restored health and expresses himself as very thankful to his friends for the numerous inquiries as to his condition and expressions of sympathy during his illness.

Toronto.

The Gardeners' and Florists' held their annual meeting Nov. 25, and elected officers for the ensuing year. There was a very large attendance of both members and honorary members, and the various speeches and reports were received with the utmost enthusiasm.

The result of the elections may be considered satisfactory in every way except to your humble servant the undersigned, who lost a bet on the result of the presidential election through putting faith in a "tip" whispered in his ear by a "little bird"; the bird was a liar of the first water, and will be shot on sight the next time he attempts to forecast the results of an election.

Mr. John Chambers was elected president for a third term by a large majority. Mr. Thos. Manton was elected 1st vice-president; Mr. A. Gilchrist 2d vice-president; Mr. A. H. Ewing had no opposition for the position of secretary, nor had Mr. H. Simmers for the treasurership, or Mr. Geo. Manton as assistant secretary. The following members were elected for the executive committee: Messrs. J. H. Dunlop, Geo. Vair, F. G. Foster, S. E. Briggs, C. Arnold, R. Mearns and Geo. Reeves.

With this lot of officers I think there is no manner of doubt but that the club will continue to go ahead as much as or more than it has done during the two years of its existence.

Mr. A. McPherson, who won the silver medal at the late chrysanthemum show for the best collection in 6-inch pots, was presented therewith and after vociferous calls for a speech Mac. gracefully responded. A medal was promised by the same generous donor for competition at next year's chrysanthemum show.

The executive committee was instructed to bring in a report at the next meeting as to where and when it would be advisable to hold the annual dinner of the club.

Mr. John Chambers made a neat speech congratulating the club on the success of its undertakings during the last two years, thanking the officers and members for their assistance, etc.

The treasurer reported that there was a nice little balance of about $500 to the credit of the club in the bank, which statement was received with much applause. Mr. Gilchrist was certainly a model treasurer, and much regret was expressed that he declined to take the position again on account of living too far out of town.

The secretary reported 46 new members during the year and 4 honorary members, a total of 133 members; of these 91 were in good standing and 42 indifferent and bad. E.

A Sociable.

Mr. John N. May gave to the members of the N. J. S. F. Club and their friends a pleasant reception at their club rooms at Summit on Saturday evening, Nov. 21. The usual quiet of the club was disturbed with sounds of merriment when we arrived; we were just in time to hear Mr. May's good story of the "Vermont Dominie," which called forth peals of laughter. Many other witty stories and jokes were told, when lo! two men enter carrying an immense tray laden with comforts for the inner man, followed by two more modern Hercules bearing a temperance brewery on their stalwart shoulders. A grand descent was made on the good things, after which the fun ran high, the Major making a decided hit on the intricate relationships of the "Wild Man of Borneo," while Mr. Joseph Manda rendered the beauties of "Maggie Murphy's Home," which was encored. As it is nearing the midnight hour all stand up and tender a vote of thanks to the tune of "He's a jolly good fellow" to Mr. May, who is always on the alert to make and cement good fellowship among the craft. Success to him. P.

Montreal.

Notwithstanding that our G. and F. Club have to draw on their reserve fund pretty heavily to pay the premiums at the chrysanthemum show it has resolved to hold the usual spring show on or about the 15th of April.

It is also proposed to adopt the plan of giving a lump sum in each section to be divided between the exhibitors according to the number of points awarded.

The prospects are good for big meetings of the club this winter; the private gardeners are becoming more interested in the club and every meeting adds two or more new members; the list of associate members is also swelling fast. J.

REMOVAL.

BURNS & RAYNOR,

Wholesale Florists,

HAVE REMOVED TO

49 West 28th Street, NEW YORK,

where they will have larger store space and better facilities for their rapidly increasing business. Their method of **Shipping Roses** has given them a large out of town trade and for good flowers, especially **Beauties** and **large Mums** the above address is **Recognized Headquarters.**

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

J M HARRIS

MR. J. M. HARRIS, whose portrait appears above, was well known in the American seed trade for many years, the result of almost a quarter of a century of faithful service with J. M. Thorburn & Co. Always courteous he had the univeral esteem of all who came in contact with him either in commercial or social life. Both Mrs. Harris and himself carry with them to England—their new home—the best wishes of many friends on this side of the Atlantic.

Philadelphia.

Below is an extract from a private letter dated Philadelphia, Nov. 22, '91:

"I think the outlook for a good trade or season in the seed trade is quite flattering. A few seedsmen seem inclined to make prices in their wholesale list below what they should be for good seed, but the best informed seem to think their seeds will be wanted at fair prices. Most of the heads of the seed houses in this city seem to be hard at work on their catalogues that will shortly appear. Mr. Maule seems to have the work of four or five men, as his head man on the *Practical Farmer* is sick and unable to attend to any business, and with the work of preparing matter for a weekly paper and all the correspondence attending it, and getting out a nice catalogue, I see plenty to do. But I would not wonder if his Prizetaker onion was a few pounds heavier than we have ever seen one, for the *Practical Farmer* keeps talking to us on that line.

"Mr. Burpee is also very busy on his new catalogue, but there is an unusual calm, happy exterior to his manner, as though he was going to surprise us all by some great novelty within the next few months. C. C. M."

PHILADELPHIA.—Mr. H. F. Michell, until lately with Henry A. Dreer, has purchased the seed business of Wm. H. Smith at 1018 Market street and will continue the same.

News Notes.

COLORADO SPRINGS, COLO.—J. E. Miller has sold his greenhouses to Mrs. N. H. Roe, who will continue the business.

HALIFAX, MASS.—G. A. Parker, gardener for the Old Colony Railroad, whose greenhouses were destroyed by fire last winter, is just rebuilding. Four new houses are nearly completed.

SAN FRANCISCO.—At the recent meeting of the California State Horticultural Society officers were elected as follows: President, E. W. Hilgard; Vice-President, S. J. Stabler; Secretary, E. J. Wickson; Treasurer, A. T. Perkins; Directors—Leonard Coates, E. M. Ehrhorn, Howard Overacker, E. E. Smith, A. L. Bancroft.

PITTSBURG.—Mr. Henry Phipps, Jr., has offered to build for the city of Pittsburg a conservatory in Schenley Park at a cost of $100,000. The offer is not coupled with any conditions. Mr. Phipps is further quoted as saying that the conservatory will be the most magnificent structure of the kind in the country if it takes double the amount named to make it so. Mr. Phipps is the gentleman to whose generosity Allegheny City owes its splendid conservatory.

Fires.

The greenhouses of Kingsbury Bros., at Raymond, N. H.; loss $1,400; no insurance.

The greenhouses off Granite Avenue, Milton, Mass., owned by James McGovern; loss $1,500; insured.

The greenhouses of Frederick Dellert, at Great Barrington, Mass.; loss $700, with but slight insurance.

BOSTON, DEC. 1.—The flower-pot manufactory of A. H. Hews & Co. has been destroyed by fire. Loss, $45,000; insurance, $25,000.

Lock Box 77. UPPER SANDUSKY, OHIO.

WHY You Should Grow Mushrooms.
Because they are the most profitable crop for the outlay that can be grown and may be grown without interfering with other crops. The market is sure, the supply never having been equal to demand.

WHEN You Should Grow Mushrooms.
During the Winter and Spring months, the first planting in August or September with successional planting until April.

WHERE You Should Grow Mushrooms.
Under the greenhouse benches, on the greenhouse benches among growing crops, in Rose Houses, in frames in the greenhouse, in cellars, stables or outhouses, in the open field or in mushroom houses.

HOW You Should Grow Mushrooms.

First get spawn that will grow. It must be fresh, well spawned, and in good condition. **Gardiner's Celebrated English Mushroom Spawn** is the best, and is always fresh and reliable. The details of culture are given concisely in our treatise, **"Mushrooms for the Million,"** Mailed free. **Falconer's "Mushrooms and How to Grow Them."** Published at $1.50. (Gardiner's price $1 35 post free.) **Robinson's "Mushroom Culture,"** 50 cts. postpaid.

GARDINER'S ENGLISH MUSHROOM SPAWN.

John Gardiner & Co., have made a specialty of choice spawn for years, and their celebrated English brand (made by the best maker in England, specially for their trade), has gained an enviable reputation among critical growers for its uniform good quality, and can be thoroughly relied on to produce a good crop of the best mushrooms. Orders booked now for delivery as wanted, $8.00 per 100 lbs. Special rates to large growers. Address all correspondence to **21 North Thirteenth Street,** Philadelphia, Pa.

JOHN GARDINER & CO.

Lily OF THE Valley

BERLIN PIPS of first quality now ready, $8.00 per 1000.

AZALEAS for forcing, fine plants, $40.00 to $70.00 per 100.

L. AURATUM, LONGIFLORUM, HARRISII, Etc. on hand now.

Any florist who grows **SWEET PEAS** and does not grow **Blanche Ferry,** does not know its value. Because it is the best of all. This is the third year we have sold it, and everybody likes it. $1.00 per lb. by mail.

V. H. Hallock & Son,

QUEENS, N. Y.

Mention American Florist.

LILY OF THE VALLEY PIPS.

100,000 Berlin, extra selected quality, offered for sale, to arrive in quantities per case to suit, at $9.00 per 1000.

Special prices to the trade, as to quantity.

F. R Pierson.....Tarrytown, N. Y.
Orders for another year must be made before April 1st, either at the American houses above, or at the Hong Kong house.

PANCRATIUM CARIBBAEUM.

(The Great Spider Lily.)

This was one of the best selling novelties last season, and not only sold, but gave **SATISFACTION** to the purchasers. Thousands of bulbs have bloomed freely in all parts of the country. Every **LIVE FLORIST** will catalogue it this season, and to meet the popular demand we have secured 250,000 bulbs of blooming size.

We offer these at $3.00 per 100; $22.50 per 1000, packed and delivered f. o. b.

We also have a few bulbs of the **CRINUM NOBILE** that great average over 2 lbs. weight, at $35 per 100, and some fine **CRINUM AMERICANUM** at $7 per 100. These bulbs are all first quality and size. Order now, and be in time to insure your supply.

Prices very low, on application.

F. A. BALLER, BLOOMINGTON, ILL

The New Boy.

The new boy had just graduated from school, and while the men on the place all held the same opinion as to his general worthlessness for manual labor, yet they all from the foreman down entertained a wholesome respect for his literary attainments and his superiority in "book larnin'" was meekly conceded. In the completion of his education, however, the current yellow-backed literature had been a considerable factor.

One day while a big agave was being moved, one of the large, fleshy leaves being accidentally broken, recalled to the new boy the wonderful virtues of the agave as described in his favorite dime novel, where the leaves were represented as furnishing delicious sustenance to the thirsty Indian hunter in the desert. Here was a chance to test its qualities. He kindly took the rest of the men into his confidence, and when lunch time arrived the big leaf was carefully peeled and the succulent center cut into nice slices, and distributed with much condescension among the crowd as an appetizer before dinner.

Not much dinner was eaten that day. Neither did the wrath against the new boy break out in blasphemous abuse, for all were too busy nursing swollen mouths and struggling for the possession of the nozzle end of the hose.

PALMS and FERNS

Well grown Specimen Plants, fit for immediate use.

		Each.
KENTIA,	3 to 3½ ft. high, 6-inch pots, 7 to 8 leaves	$2.50

Please mention the AMERICAN FLORIST every time you write any of the advertisers on this page.

Vaporizing Tobacco.

In answer to J. W. Ellis as to whether tobacco can be successfully vaporized on the ordinary 4-inch hot water pipes, I can say yes. Pour boiling (not merely hot) water over a lot of tobacco stems in a barrel, and allow them to stand at least twelve hours before using. Use ten evaporating pans, fitted to the 4-inch pipes, to a 100-foot house, keeping them filled with the tobacco liquor. This will keep the house free from green-fly as long as heavy firing continues, but does not answer as well either early in the fall or late in the spring, when firing is light.

I have often thought that the following would answer in the latter case: Take an ordinary low (short-legged) gasoline stove with two or three burners; have a large, shallow, flat-bottomed vessel to place on the stove, fill with the tobacco liquor, start the burners, and you can vaporize the liquor as slow or as fast as desired by adjusting the burners. And by having a tight-fitting cover, sulphur fumes could be produced in any volume desired without fear of burning, by placing some flour of sulphur on the lid. Such a stove could be placed in the walk at any point, and it could be moved from place to place. This method of applying sulphur would, I believe, be of great benefit in the early fall for the prevention of mildew, and in the spring help to keep the spider in check without having to overheat the sulphur-painted pipes in order to obtain the desired result.

College Hill, O. JOHN WILSON.

THE AMERICAN FLORIST CO.

WILL PUBLISH A CORRECTED EDITION OF THE

DIRECTORY

OF FLORISTS, NURSERYMEN AND SEEDSMEN

of the United States and Canada

FOR 1892

ABOUT JANUARY 1, NEXT.

We shall cover the whole country by correspondence and compile an entirely new list, which will be as nearly correct up to date as it can possibly be made. But in addition to this we invite corrections from anyone in the trade.

As usual, we shall devote some of the pages to advertisements. Rates given on application. The price of the new book will be $2.00.

SEND IN YOUR ORDERS NOW.

GEM STEEL WIND ENGINE AND GEM STEEL TOWER

The GEM ENGINE, when furnished with Graphite Bearings, requires no oiling, no climbing of towers, no hinged or frail-jointed towers and practically no attention, yet is more durable than other Wind Motors that require all this, and more unique in finish. The GEM TOWER combines beauty, strength, durability, simplicity to the greatest extent and has no equal. Both are manufactured and guaranteed by the oldest and most reliable Wind Mill Company in existence, and who built the Halladay Standard Pumping and Geared Wind Mills, the Standard Vaneless and U. S. Solid Wheel Wind Mills, Pumps, Tanks, Horse Hay Tools, &c. No other company offers equal inducements. Send for Catalogue and Prices.

Mildewed.

BRIGHTMAN—Good morning, Lightman; are you going with the boys to see the Flowertown exhibition?

LIGHTMAN—Am I going? Well, I should say not. I've got something to do besides run round to exhibitions. It's all right for you rich chaps to go kiting round the country. I stay at home and attend to my business.

BRIGHTMAN—Yes, I know; but a couple of days off will brighten you up and when you come back you can attend to your business just so much the better, for you will have learned something. For my part I can say that I have never gone off to attend an exhibition or to take a look through the establishments in other places without feeling afterwards that I was well repaid for the trouble and expense.

LIGHTMAN—All right; if you need to learn something you go on. I know enough to look out for my own business, and don't want any assistance or advice from any of these fellows. I learnt my business before half of them knew the difference between a geranium and an apple tree.

And then he lit his pipe and went off to put another prop under the rotten rafters, while the hired boy decorated the windows by stuffing a handful of scarlet geraniums and measly looking pink roses into a blue hyacinth glass that hadn't been cleaned for a month, and hung up the smilax with the wrong end in the water.

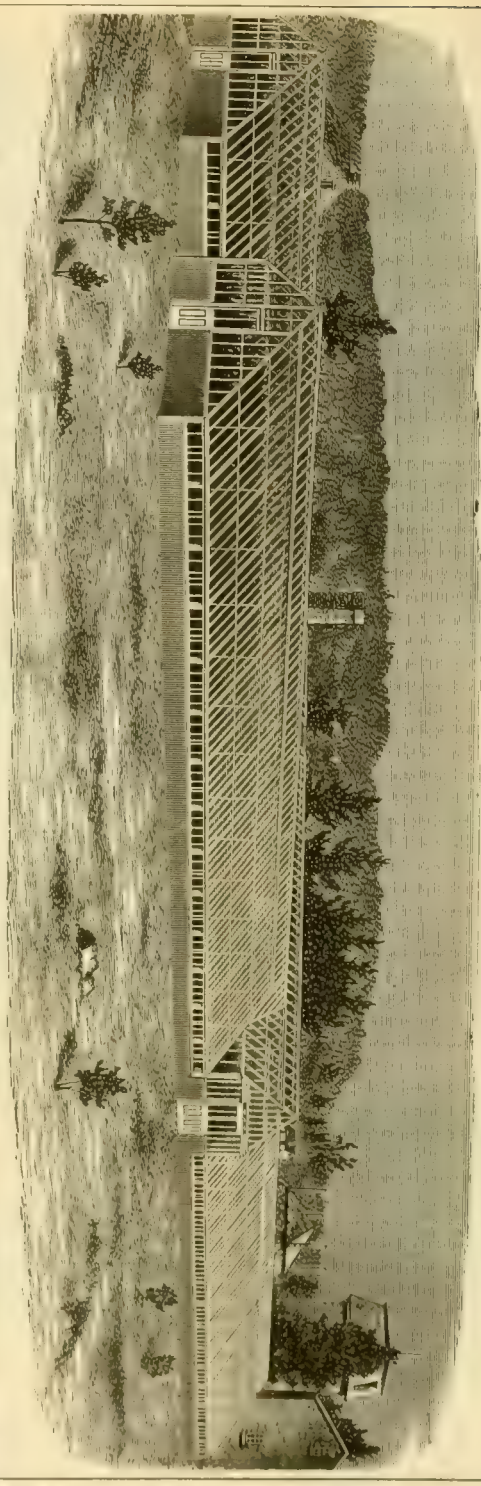
LENOX, MASS.—Mr. Morgan is erecting a range of new greenhouses and Mr. Sloan is also making preparations to add to his glass.

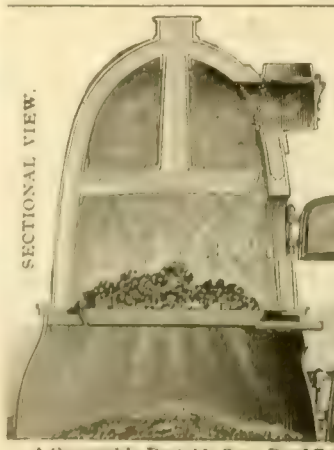
BOSTON FLORIST LETTER CO.,
13 Green Steet, BOSTON, MASS.
Manufacture THE BEST LETTERS IN THE MARKET.
Sizes 1½-inch and 2-inch, $2 00 per 100. Patent fastener with each letter.
WHEAT DESIGNS OF EVERY DESCRIPTION.
AGENTS: A. Rolker & Sons, New York; F. E. McAllister, 22 Dey St., N. Y.; E Kaufman, Philadelphia; H. Bayersdorfer & Co., Philadelph a, Pa; A. D. Perry & Co., 33 Warren St., Syracuse, N Y.; A. C Kendal, 116 Ontario St., Cleveland, O.
J. A. Simmers, Toronto, Ont., Agt for Canada.

No More Leaky Sky Lights
Or Slipping and Breaking of Glass in Green Houses or Farmer's Sash. You can save money and glass by using the



PATENT GLAZIER Twin Points.

THESE POINTS are far superior to the old mode of setting glass, as they will hold each pane in place, preventing the glass from slipping and causing binding and cracking. Each box contains 500 rights and 500 lefts. We also make a tool for driving the points. Price, 35c a Box. Driver, 15c. A Liberal Discount to the Trade.
These points are kept by all prominent Hardware, Paint, Oil, Seedsmen, and Florist Supply Stores in the country. If you do not find them, send postal for a free sample, or send 60 cents for 1 package and 1 driver by mail, post paid to any part of the U. S.
H. W. EAMES CO., Milford, Mass.,



Kills Mildew and Fungus growth. What does?
GRAPE DUST.
Sold by Seedsmen.

HITCHINGS & CO.

Now is the time to consider the matter of holiday prices. The prices we should seek to quote are those that will sell every flower and at the same time bring in every dollar possible. To establish such prices necessitates an intelligent review of past experience and careful estimates of possible supply and demand at the coming holiday season. Do your thinking on this matter now. Not after Jan. 1.

Chrysanthemum Shows.

Echoes from the New York Show.

The flat flower stand boards on which the sets of one bloom of a kind are usually shown must go. No matter how big and broad and bright the blossoms were that rested on them, the arrangement is ugly and meaningless and the flowers are shorn of their beauty. Mr. E. A. Wood came from Boston with 50 flowers that had long stems and fine foliage and stuck them into small vases, one flower in each vase, and secured the first premium. And all the praise and admiration by the public were bestowed on the long and leafy stemmed flowers in vases and not on the bare-headed blossoms lying on the flat green boards. Away with them, and keep them away! That these decapitated flowers keep longer in good condition than long stemmed ones is no excuse for clinging to the barbarous practice—away with it!

Fashion has set its face against bunches of old-time artemisias, single flowers are now grown large enough to be an ample corsage in themselves, big globular or whirligig with a stem like a walking stick and foliage fat and fresh as spinach in spring.

Anemones of all kinds, and Chinese and pompones are losing ground, and the Japanese are the reigning favorites. Oftentimes the Chinese have splendid blossoms, but where is the 2-feet leafy stems? And the singles have almost disappeared from among us, and no one is weeping.

Every plant and cut flower exhibited should be conspicuously and legibly labelled; the tyro and the expert want to see the name. Labels stuck into the pots, or pencil-marked bits of paper thrust halfway down the throats of the bottles are not legitimate naming in a public exhibition where the rule is "don't touch the plants or flowers." White card labels hovering over the plants have a graveyardish or killing effect upon the exhibits. But Ernst Asmus had a capital label. It was a neat black card with the name of the flower printed on it in gilt letters; everybody admired it and anybody could read it at a glance. And these card-labels will keep forever and are as available in coming years as they were this season.

One single variety was shown as a pot plant. No pompones of any kind were exhibited. Eve, Flora Macdonald, Mme. P. S. Blanchard, Mandus, Dr. Sharp, Mrs. Heale, Princess of Wales, and Amie Hoste, were the best and most of the Chinese sorts. The last named looked a little out of place, but Mr. Tricker insists it is where it belongs. Souvenir de L'Ardene, Fabian de Medina, Thorpe Jr., Mme. R. Owen, Mme. Cabrol, and C. Jukes supplied the anemone flowers. Japanese were legion.

New plants consisted of variegated Ficus elastica, Heliconia aureo-striata, Phrynium variegatum, Zingiber D'Arcyi, Alocasia Laselliana, A. regina and A. Luciani. A yellowish ("golden" I ought to say) leaved form of Livistona chinensis was shown, but its color is too suggestive of sickness to be desirable. There was also a variegated-leaved variety of this species of palm in which some of the leaves were streaked with pure white.

Among Dracænas Baptistii, amabilis, Smithiana, Massangeana, Lindeni, and Neo-Caledonica were among the most striking.

We see Pitcher Plants at every exhibition, but it is many a day, aye year, since we have seen anything in this line to compare with the magnificent specimens James Taplin used to treat us to 12 to 20 years ago from South Amboy, N. J.

Pteris Victoriæ the new variegated fern that has taken such a hold upon our florists was shown. Perhaps it is not generally known that our modest orchid and chrysanthemum man, I. Forsterman of Newtown, L. I., was the discoverer and introducer of this little beauty. It was in 1883 when he was collecting orchids in the Indian Archipelago for Sander he found this gem on a moist, open slope in Ta Tan, one of the Philippine islands, and thence sent it to England.

Griffin's tuberous begonias got a boom. In addition to large photographs showing them as they grew in the open field in summer, he kept up a liberal supply of cut flowers of them all the time. This class of plants has a future.

The exhibition altogether was an immense success, and the Florists' Club and Madison Square Garden Co. have worked earnestly and harmoniously together and to their mutual advantage. Our club is neither dead nor dying; on the contrary, we are waxing stronger in membership, prestige and confidence. But we have learned a mighty lesson—that while we can get up a splendid show, it takes, in this town, a showman to show the show.

WM. FALCONER.

Bay City, Mich.

The Bay County Horticultural Society, organized early this spring, held their first annual chrysanthemum show Nov. 16 to 21. It was scheduled for an earlier date, but owing to the lateness of the season was postponed as above.

Looking at it from all points of view it was an undoubted and unqualified success and the management are to be congratulated.

It was held in the spacious (now) Horticultural Hall leased by the society (formerly a rink) and was profusely decorated with bunting, evergreen wreathing, etc.

Both the professional and amateur classes were well filled. Among the latter was unusual good natured rivalry, as the

gratuitious distribution by the society of 50 sets of "mum" plants in the spring had set them all to working and thinking as to who would "put up" the best lot of plants. The price of "drugs" had gone up, one order for sulphate of ammonia alone being for 10 pounds. Some claimed they had never seen a "mum," and a "mum" show was unheard of; however, some plants would have done credit to the "profesh"; one standard which I shall nickname the "spider" was simply "out of sight."

Prof. Taft of the horticultural department of the Agricultural College, Lansing, Mich., acted as judge, and general satisfaction resulted. The one judge point system was in vogue here and proved a success and to be the only right way when there is anything like competition, and that close, as it happened in the open class for 100 blooms, 50 varieties, as will be seen by the following:

First, $150, was awarded to John Breitmeyer & Sons, Detroit, who staged a very bright and fresh lot of blooms, with Excellent, Kioto, H. E. Widener, W. W. Coles, Miss Minnie Wanamaker, Mrs. Irving Clark and Puritan to the front with an average of 90 points; second, $50, to Holznagle & Noel, Detroit, Mich., with a nice lot of blooms and an average of 87 4-10 points.; third, $25, to Fred Dorner, Lafayette, Ind., very close, average 86 1-10 points; the fourth averaging 85 5-10 points and the fifth and sixth following closely.

The question whether the prizes would have been awarded as they now stand if judging otherwise than by points had been adopted arises.

John Irvine & Co., Bay City, carried all before them in the competition for plants, being first for 10 plants, 10 varieties, with good specimens of W. H. Lincoln, Mrs. A. Hardy, Shasta, Louis Boehmer, Avalanche, etc., 10 specimen standards, 50 plants in not over 6-inch pots, with one bloom to a plant, a very creditable lot indeed, 6 plants 6 varieties, 4 plants 4 varieties, 25 plants in 25 varieties, specimen white, yellow, any color, and 4 plants in 4 colors. All above were well grown, well flowered and well furnished with leaves, a cardinal point in "mum" growing.

The above firm also carried off the following first prizes for cut flowers, with a nice fresh lot of blooms: Collection of 25 cut sprays one of a kind, 12 sprays 12 varieties (these sprays make a very showy and interesting class and should be adopted by other shows), 50 blooms one of a kind, best vase yellow, best vase any color, best vase 50 blooms. They also held first for best dinner table decoration, a very pretty arrangement of white "mums," maidenhair and favors of the white favorite, Miss Minnie Wanamaker.

Quite a sensation was caused by "honest" Geo. Vair of Toronto carrying off first for 25 cut blooms one of a kind. We'll have to annex you yet George.

Fred Dorner, Lafayette, Ind., was first for 12 blooms pink, all good flowers.

Pitcher & Manda, Short Hills, N. J., staged their collection of this year's seedlings, the most prominent of which were Harry May, W. A. Manda, the new yellow, hairy "mum," Ada McVicker, Annie Manda, W. S. Kimball, very pretty, Mrs. Hicks Arnold and others, all good form and erect stems. They also carried off the prize for best and largest bloom in the exhibition with Harry May, a grand incurved bronze, and the "Smith" prize offered by Nathan Smith & Sons, Adrian, for 12 best blooms any variety with the same.

In the amateur classes for plants T. J. Cooper, C. W. Hall, J. Pond, Dr. H. Gilbert and J. W. Miller, all of Bay City, came out with flying colors, while D. M. Baker, Adrian, swept all before him in the cut flower class.

In the special prizes for amateurs C. W. Hall, Bay City, took the "Henderson," the "Hunt" and "Spaulding," while the professional prize winners were John Irvine Co., "Dreer Prize," "Vick," "Smith" No. 1 and "Vaughan"; John Breitmeyer & Sons, Detroit, "Balsley Prize"; and Pitcher & Manda, Short Hills, N. J., "Thorpe" and "Smith" No. 2.

Nathan Smith & Sons, Adrian, Mich., displayed an excellent collection of cut blooms, as did also W. N. Rudd, Mount Greenwood, Chicago, Ill.

Visiting florists from a distance were Fred Breitmeyer, Frank Holznagel and John Noel, Detroit; Fred Dorner, Jr., Lafayette, Ind.; C. F. Johnson, Mount Greenwood, Chicago; Elmer D. Smith and J. W. Walker, Adrian, and Harry A. Bunyard, Short Hills, N. J., representing Pitcher & Manda.

The success of the show was greatly due to the untiring efforts of the president, John Irvine, T. J. Cooper and C. W. Hall respectively, secretary and treasurer.

THE DRUMMER BOY.

Galt, Ont.—Correction.

ED. AM. FLORIST:—A stranger reading your report of our exhibition would think that Mr. Langham had taken the three first and best premiums for chrysanthemum plants and this is incorrect. For best 12 plants G. Brown, gardener to Mr. Goldie, was first, J. W. Scott second and John Wells third. For 6 plants James Gardner, gardener to Mrs. Ball, was first, J. W. Scott second and D. McGeorge third. For 4 plants Mr. Langham was first, J. W. Scott second and A. Common third. And so on down to 1 plant.

JAMES W. SCOTT.

St. Louis.

There were some slight errors in your report of the St. Louis chrysanthemum show. The first prize for the largest single flower grown in St. Louis was awarded to John Armsby, gardener to J. W. Kauffman, and not to Harry Leeds as stated in your report.

There was also a special prize of $50, offered by Mr. J. W. Kauffman, that was not noted in your report. This was offered for best 50 chrysanthemums and was won by John Armsby. J. A.

Judging Chrysanthemums.

I, for one, am not altogether satisfied with the present system of judging new varieties, especially seedlings. I have seen many good things not countenanced and consequently discarded, simply for a want of a thorough knowledge of the varieties which are at present in commerce. Certainly an improvement in type, form, fullness, and color should be looked into separately and individually judged accordingly. B. S.

SECRETARIES of organizations giving exhibitions should keep on file a complete set of the premium lists issued by other organizations. They will be found exceedingly useful for reference. Send your own premium list and request an exchange.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

Nepenthes Edinensis.

Nepenthes Edinensis is one of the best hybrid Pitcher Plants. The urn-like receptacle at the end of each leaf is large and well formed and of a pleasing color, light brown markings on a creamy ground somewhat after the pattern of the inner surface of the flowers of Aristolochia elegans. The parents of this handsome hybrid are old and well known kinds—Rafflesiana and Chelsonii. It was raised by Mr. Lindsay in the Botanic Garden, Edinburgh.

The culture of these curious plants is by no means so difficult as is generally supposed. Cuttings will root in sand and chopped sphagnum in an ordinary propagating case, the only requirements during the rooting process are heat and moisture in abundance. Sphagnum moss, fibrous peat and charcoal in equal proportions is the best mixture in which to grow them. The temperature may go above 100° F., but never less than 50°, with abundance of water at all times. If the plants are grown near the glass they should be slightly shaded from the hot sun and kept free from cooling draughts. The plant from which our illustration was taken is at the Botanic Garden in Washington, D. C., under the care of Mr. Geo. W. Oliver, who takes great interest in this class of plants.

Our Telephone.

"Hello! Is that Mr. James Dean, of Bay Ridge?"

"Yes; what's the matter now?"

"Oh, we just want to talk with you a few minutes."

"About having a business convention at Washington next August, I suppose. Now just let me tell you one thing: If you fellows ——"

"No, no. We see that the Philadelphia club poet has immortalized you on that matter and we'll let up on you for a time. We would like to hear something about your azaleas now. Are you into them as heavily as ever?"

"Yes, I have a big lot; nearly 10,000, I should think, and they are looking splendid. The earliest lot will be in bloom for Christmas and I shall have them right along after that in a succession till Easter, at which time, of course, I plan to have the great bulk of them come in."

"Do you grow any for cut flowers?"

"No; there's no demand for azalea flowers in New York. They use them to some extent in cheap work on the East side, but that is all."

"What color do you find sells most readily?"

"Well, I suppose a good, bright pink, although all colors are in demand. Most of our orders are for assorted colors."

"What varieties would you recommend as the most desirable to grow?"

"That is rather difficult to answer, as we grow a great many kinds. I might name a few of the best of them, though. If I were confined to one azalea, and only one, I would take Van der Cruysen. It is a free bloomer, a good grower, and sells well always. Other pink and red varieties I can recommend are Vervæneana, Simon Mardner, Empress of India and Emperor of Brazil, all double, and Sigemond Rucker, single. As a rule the doubles make the finest show, of course.

"Then there are Comte de Chambord and Mme. de Greve, single, and Princess Victoria, double, pink with white margin. The latter is a very beautiful thing, but a little tender to grow.

"In whites we have Blutheana, the freest flowering single white of all and early,

NEPENTHES EDINENSIS.

also Deutsche Perle, Sacantata and Bernard Andre, fine double whites. Deutsche Perle is one of the most useful for a succession of bloom. It will last two or three weeks before it is all flowered out, and is therefore good for the conservatory. Daphne is much on the same line. It comes in early and continues in flower till spring. Such kinds are not good for specimen plants for exhibition purposes, because it is impossible to get the flowers out simultaneously.

"In scarlet and red are Pres. de Ghellinck de Walle, semi-double, a good market variety, Coquette de Orange, double, a very free bloomer, and Roi de Holland, double. Some don't like the latter, but it is one that the most ordinary greenhorn can get into flower. It always comes. The finest scarlet of all is Apollo (Schultz). It is new and scarce, however.

"I find there is considerable difference is varieties as to liability to shed their flowers when shipped in bloom. Those with pliant stems are less likely to drop than on the more rigid forms, as they feel the jar less."

"Do you import all your plants?"

"Yes; I import direct from Belgium in latter part of October and November."

"Do the growers send traveling agents to America."

"No, not they. The azalea growers are a very independent people, and if you want anything out of them you have got to go to them to get it. Of course, there are dealers who send agents to this country who take orders for azaleas or anything else, but the grower never does it. He don't need to. Large azaleas are very scarce on the other side. England, France and Russia demand them all for private trade. Russia pays as much for azaleas as any country in the world, probably."

"Do you think that we shall ever grow them in quantity here?"

"Well we certainly can grow azaleas here. There is no doubt about that, and I think the day will come when it will be done. My father was quite an azalea man at Astoria, and had the finest collection in the country at that time. He grafted and grew his own stuff. We used to do it, too, at Wilson's in the 60's. The stock we used to graft on was the old Phœnecia, but any strong growing variety will do equally well. One trouble with us here is that our people don t like to have to look three or four years ahead for their money. And again, they can hire men in Belgium at $3 per week that we would have to pay $12 a week for. Most of the fine new varieties over there are raised by amateurs. The stock we import is two to three years old from the graft.

"It makes considerable difference how you order. I make my own selection. We want the best variety and will take nothing else, and naturally our stock costs us more on that account, but then we get just what we want. We are undoubtedly carrying at present the most valuable stock of azaleas in America."

"Do the imported plants generally arrive in good condition?"

"Yes, they come in pretty good shape now. Formerly there were a good many lost through overcrowding. They used to pack them in like a box of sardines, interlacing the tops closely, so that there was no ventilation, but they are getting to understand it better now, and for the last few years there is a great improvement. They secure each plant so that the heads are free, with sufficient air space round them. About the only sources of trouble now are too wet or too dry packing. When packed too wet they will lose their leaves, but we can generally bring them to so that they do not die, but when packed too dry they are gone up entirely and are a complete loss.

"As soon as received we pot them and place them in the houses. The following spring we plant them out in frames, then pot them again by the 1st of October, or even sooner if heavy rains set in. This is one of the important things to be looked out for. If not convenient to pot them at once when the heavy fall rains set in, they should be protected by throwing a sash over them.

"In the frames we use the soil from pansy frames, which has been heavily manured the preceding fall, and find it very satisfactory. We cannot use soil that has been newly manured. They should have a light mulching of hay in the frames. Never use manure for mulching. They should be syringed pretty freely in summer to keep down red spider.

"About once in two weeks we pinch out all leading shoots that tend to throw the plants out of shape. If azalea growers would pay more attention to this matter of pinching back we should not see so many twisted and tied plants at the exhibitions. When a plant has to be tied in to bring it into symmetrical form, it indicates that the gardener did not give

proper attention to his plants while they were making their growth. On the other side of the water the growers are getting careless on this point. Plants are sold according to the diameter of their heads, and there is a temptation to sacrifice shape for size. After growing them one season here and taking proper care of them, we get a nice, short, bushy growth, beautifully shaped plants and fully 50 per cent. more flowers."

"At what temperature do you keep azaleas in winter?"

"Well, we hold them at about 40°. When we want to hurry them along, say for Christmas, we give them 55° to 60°. But as you know, Easter is our great objective point, and we hold them back all we can. We do this with difficulty when Easter comes late, as is the case this year, and we find it necessary to keep the houses down as close to the frost line as possible. It sometimes occurs that they get a little too low. When this happens the men have instructions to fill the houses with tobacco smoke as quickly as possible. We place wet tobacco stems in heaps on the paths, and put live coals upon them. On one or two occasions we have had quite a severe freeze come on us anawares, when the temperature was so low that water thrown on the plants would stiffen at once, and even the water in the hose was frozen. We applied the tobacco smoke treatment and did not lose a single plant."

"Do you thing there is any special value in the tobacco, or would any moist smoke be equally effective?"

"No, I don't claim that there is any special virtue in the tobacco, but I have never used anything else. Tobacco is something that every greenhouse man has at hand, and we are sure on one point with it, that it can do no harm."

Carnation Notes.

In reviewing the papers and discussions before the Am. Car. Society I would like to note some of the results of my experience and observations.

The soil on which the carnations have been grown is quite stony, and a sort of peat and loam mixture; on this the Grace Wilder has proved an excellent summer bloomer, making fine dwarf, stocky plants, which gave a profusion of finely colored flowers, and which needed no staking. The plants have been grown on the same ground year after year for several years, no ill effect being apparent in the health and vigor of the plants, which have been grown from the same stock since its first introduction some ten or twelve years ago. In regard to the continuous use of the soil for carnations I may state that one house has been used for ten years without change of soil, and that last year the finest house of Wilders that I have ever had were grown in this house. The first three or four years the house was planted with Snowdon, which did finely, more than 10,000 flowers having been picked on a single day. Perle roses were then grown for one year, these also did splendidly, the flowers being of fine color and no "bullheads" were found, probably owing to the peculiar nature of the soil. Since that time the house has been constantly grown to Wilder, the old plants being kept in for summer flowering and only thrown out when the house was cleared out preparatory to bringing in the plants from outside about the first of September.

The beds were solid, being raised about six or eight inches above the walk, which was in the center of a house 14 feet wide, and 20 inches high at the sides. The manure used was cow manure, well rotted until after the roses were out, since which time nitrate of soda, pulverized sheep manure and wood ashes were used, with a good sprinkling of air slacked lime put on each year before digging. This year a mild brine was used with seeming excellent effect. A teacupful of common table salt was used to a common sugar barrel of water, laid on evenly over the beds, plants and all, which were then syringed over with the hose. A coarse rose watering pot was used for the brine, to distribute it more evenly.

In propagating I have for over 20 years used only pipings, and with a very small percentage of loss. The method is to take the shoot to be used between the thumb and forefinger and draw it out below the second pair of well developed leaves where the "wood" is moderately firm, no knife being necessary, the pipings being simply placed in the sand, a cut being drawn in the sand to receive them with a knife or trowel, and they are kept wet and usually root in ten days or two weeks. They are then potted off into small pots.

I find that a good time to propagate is anywhere from November to May, whenever a good batch of stock is in sight; and in the early days of the Wilder and Snowdon, when a large stock of plants was desirable, the process was kept up all summer. I prefer potting the young plants to boxing them, as less injury is done them when planting out.

During the past three seasons I have grown, as an experiment, a few thousands of carnations indoors all summer. The practice has been to shift the plants into 3-inch pots instead of planting outdoors. Soon after the plants have been pinched over in twos they are shifted into threes and when large enough they are again topped and allowed to stand in the threes until August, when they are planted out in the house where they are to remain; and I am satisfied that for a holiday crop this is a success, for with the changed condition of the market of late years, when the chrysanthemum has monopolized the business, an early fall crop is less desirable and the carnation plants not being exhausted, better midwinter results may be obtained.

Malden, Mass. BENJ. GREY.

Business Methods.

BY C. W. WARD.

[Read before the meeting of the American Carnation Society at New York, November 1.]

My paper must of necessity be brief as the time given me to prepare it as well as my limited experience in the florists' business preclude an extended essay.

The first business maxim should be honesty and fair dealing; the second to conduct our business so that it shall be successful and profitable.

While there are no set rules nor rigid lines upon which business can be conducted there are certain general principles which may be universally applied. You should not undertake to do more business than you can properly oversee and care for yourself; nor should you sell your wares below cost of production; neither should you make prices upon an article without ascertaining what it costs to produce it. You should never engage in an injudicious cutting of prices below market values in hopes of increasing your business or getting an undue advantage of your neighbor. The most foolish thing a grower or dealer can do is to attempt to run out his competitor by selling goods below cost. This, with the improper extension of credits, has ruined more business houses than any other cause.

Treat your customers fairly and liberally. When shipping your customer an invoice of plants imagine yourself in his place and what you would think if you should receive the same plants at the same price you are receiving for them and packed in the same manner as you are packing them. By keeping this in mind, and treating them as you would wish to be treated, you will retain your trade as well as the good will of your customers. The best way to retain your customers' good will is always to send first class goods so packed that they will arrive in fine condition.

Aim to produce a high grade article and sell it at a fair price and a fair profit. Remember that in growing plants and flowers there is also plenty of room at the top while the lower ranks are always crowded. In growing cut flowers for market aim to send fine long stemmed blooms, neatly bunched with some foliage in the bunch. In bunching tie the stems close to the butts so that the flowers will fall gracefully apart when the bunch is held up.

In packing flowers wrap the butts of the stems in damp sphagnum moss and wind soft paper around the moss, packing the bunches upon soft paper cushions so that the flowers may not bruise. Use clean, neat boxes to pack in. The neater your flowers open out on the market the quicker they will sell, and if your flowers open up uniformly fresh and in attractive shape you will make a reputation for superior stock and eventually get the highest market prices.

Try to send a fair quantity of first class stock upon the market every day. Do not suddenly flood your commission man with a large quantity of perishable flowers and then blame him because he does not sell all at high market quotations. Do not disappoint your customers, convince them that they can rely upon you and that you rely upon them.

Treat your commission man fairly. Do not censure him unless you are sure he deserves it. Give him credit for the *good* he does as well as for the *bad* you think he does. By so doing you will gain his respect and good will if he is honest and you should deal only with such as are honest.

In selecting your customer or commission man watch his habits carefully. If he is economical and careful about his living and business expenses you can feel reasonably safe in dealing with him; but if he is reckless and extravagant in his expenses, keeps fast company, gambles and follows the betting fraternity, be very careful in your dealings with him, as sooner or later these elements are sure to ruin him and you will eventually lose thereby.

Keep up with the times; do not lag behind the age. Keep posted as to the improved and coming popular plants and be prepared with a stock when the demand comes.

All these may be considered business methods. You may think them impractical from your standpoint, but close

observation has convinced me that the majority of successful business concerns are managed upon these general principles. But you have not learned these by hearing this paper read. Experience is our main teacher and no amount of advice nor essays upon business methods will teach us to be business men. Each business and each locality has its ever-varying peculiarities which must be laboriously learned. The only course is to put the ideas imbibed from advice or essays upon practical trial and watch the results, and the experience obtained thereby will eventually teach you proper business methods.

American Carnation Society.

NOMENCLATURE CALL.

The undersigned committee request the registration of the names of new seedlings, also of any other varieties that are not well known, so as to avoid duplication and confusion in cataloging them.

Any variety known under two or more names should also be reported, with both or all the names it is known under given.

Whenever possible it will be well to give the pedigree of varieties, stating color of flower in each parent and in particular state upon which the seed pod was produced. It will also be well to give a complete description of varieties registered, so that this committee may be able to make a complete report at the February meeting.

The committee also respectfully offer the following suggestions in the naming of seedlings: Use short names as much as possible. Descriptive names are desirable, one name being preferable, but such as convey one idea are good, as Tidal Wave, Silver Spray, etc. In the use of proper names avoid similarity, such as John Smith and afterward a Mrs. John Smith. The names of public characters are most likely to be duplicated.

Send names and other matter relative to this committee to Albert M. Herr, Lancaster, Pa.

A. M. HERR, } Com. on
C. J. PENNOCK, } Nomenclature.

Carnation Ferdinand Mangold.

In your paper of November 19, on page 320, under Philadelphia notes, I find the correspondent was "struck as being remarkable that Mangold, which splits its calyx with a good many growers, was perfectly intact in the collection exhibited."

Mr. John Thorpe stated to the writer within the past year that Ferdinand Mangold did not burst its calyx, and if anybody, he ought to know. From careful observation made by me I am able to confirm this statement of Mr. Thorpe, and I am satisfied that under ordinary treatment it will not only *not* burst its calyx, but that it is as near the ideal crimson carnation as we shall be likely to get for some time to come.

Wayland, Mass. R. T. LOMBARD.

THE adjourned meeting of the Chester County (Pa.) Carnation Society November 28, was well attended. Constitution and by-laws were adopted, but permanent officers will not be elected until the January meeting. Meetings will be held on the first Saturday of every month and usually at Kennett Square on the Baltimore Central R. R. A cordial invitation is extended to all florists who may be pleased to visit this section. Marketing of cut flowers will be subject for discussion at next meeting.

Dendrobiums.

In this extensive genus of orchids we have some of the most useful and beautiful epiphytes in cultivation and the majority of them are of comparatively easy cultivation, many of the most beautiful doing well in an ordinary greenhouse and can be classed as cool house orchids, while others require a high temperature at all times.

The dendrobiums can be divided into two classes, the pseudo-bulbous species and those with upright bulbous stems.

The upright growing varieties, such as D. nobile, densiflorum, superbiens, thyrsiflorum, fimbriatum, etc., do best when grown in pots or pans and kept in shape by training to stakes. The pots should be about two thirds full of crocks and the plants grown in a mixture of fibrous peat and sphagnum moss, with a few pieces of charcoal in it. The moss and peat must not be too fine, in fact, the rougher the better, and the plant should be elevated an inch or two above the rim of the pot to allow the water to run off, as the young growths are very apt to damp off if water lodges at the crown of the plant.

The pendulous species, such as D. amœnum, Bensoniæ, Devonianum, Pierardi, superbum, Wardianum, etc., do best in baskets suspended from the roof of the house.

To grow dendrobiums well they must have well defined periods of rest and growth, and to have good flowers the growths must be well ripened. During their period of growth they like a liberal amount of heat, a moist atmosphere and plenty of water at the roots; in fact the soil should never be allowed to get dry while they are growing. After the growth is made, which in most species is by the end of August, the plants should be moved to a cooler house and only given water enough to keep from shrivelling until through blooming and starting to make new growths, then give them heat and moisture to encourage a good strong growth. If the plants require shifting it should be done just as soon as growth commences. As soon as growth commences give more heat and moisture. All the dendrobes, and especially the pendulous or basket varieties, are very susceptible to the attacks of red spider and thrip, and if signs of these pests are discovered they must be searched for and destroyed by syringing the foliage once or twice a day in hot summer weather; otherwise the dendrobiums are, unless badly managed, singularly free from insect enemies, being one of the cleanest orchids in cultivation. The flowers on many of the varieties are enormous when compared with the size of the growths that they are formed on.

It would occupy too much space to describe all the good varieties of this noble orchid, so I will only speak of a few of the best and freest flowering varieties.

D. amœnum: A pretty cool house species with long slender stems. The flowers produced from the nodes of the stem; petals white tipped majenta, lip purple, throat yellow, the flowers very fragrant.

D. Bensoniæ: A handsome hot house species; sepals and petals creamy white, lip orange with two large dark purple spots at the base.

D. chrysanthum: A strong growing and fine hot house variety, growing best in a basket and usually producing its flowers along the stem at the time of making its growth. The flowers are deep yellow, lip of the same color marked in the center by a large spot of deep blood purple.

D. chrysotoxum: This is a showy species, an upright growing evergreen plant with fleshy stems about a foot high bearing three or four large dark green leaves clustered at the top of the stem. The flowers are produced in large lateral racemes at the top of the stem, are golden yellow and last a long time in perfection. Pot culture in peat suits this one best.

D. Dalhouseanum: A beautiful strong growing species, very large and showy flowers and very free flowering, the sepals and petals lemon color edged with rose, lip white with yellow base marked with crimson. Can be grown either in a pot or a basket.

D. densiflorum: This is one of the handsomest and freest flowering of all the genus. It is a strong upright grower, evergreen. The flowers are produced in large racemes pendent from the upper joints of the stems, color bright yellow.

D. Falconeri: A fine cool house variety with long slender knotty stems. The flowers are large, white, with purple tips, lip white, marked yellow, throat spotted purple.

D. nobile: This magnificent species is so well known as to need no description, it is sufficient to say that it is the florists' dendrobium and when well grown is one of the best and showiest of the genus.

D. Pierardi: A very free flowering and pretty species with long slender stems. It does best in a basket. Flowers blush white, lip yellow, marked purple, the flowers last a long time.

D. Wardianum: One of the finest, if not the best, in cultivation. A very strong grower, with a thick knotty stem. The flowers are very large, sepals and petals white tipped majenta, lip with a large orange spot and the throat spotted crimson. It grows best in a basket or on a block. JAS. S. TAPLIN.

Maywood, N. J.

A Pansy Society.

We are advised by Mr. Albert C. Hopkins, Nashua, Iowa, who signs himself as "President Pro. tem.", that there has been recently formed a temporary organization, that will soon be made permanent, of "The Pansy Society of America", to be "devoted to the culture and advocacy of the pansy, the childrens candidate for the national floral emblem of the United States." Mr. Hopkins further writes: "We confidently expect to secure its adoption and establish it officially in the American Flag as an outline setting for the stars, by July 4, 1893, thus making it a conspicuous feature of the great American anniversary and World's Columbian Exposition."

Forcing Narcissus.

Has any one of the readers of the FLORIST ever tried growing Narcissus Paper White, grandiflora, in water or soil, without resorting to the slow process of boxing and covering for several weeks, waiting for root growth?

We have the grandiflora now in bud, both in boxes and in water, as is the mode in growing Chinese narcissus. The bulbs

were boxed about Oct. 1 in ordinary soil, and set under the benches after being thoroughly watered, and have received no more attention than to water once in a while, as needed. Growth began at once, and now the plants are showing buds and are still under the benches. I might add that the pipes are warmed during the night somewhat, for the boxed bulbs are a little more forward than those growing in saucers and pans of water which are set on a shelf close to the glass.

This method will do away with the waiting for bulbs to make roots in the pits or under coverings of straw, manure, etc.

I don't know that this is new to anyone, but all authorities recommend treatment similar to that for hyacinths and other Dutch bulbs. BYRON H. IVES.

Albuquerque, N. M.

Fatsia or Aralia Papyrifera.

Mr. W. R. Smith of the Botanic Garden, Washington, has kindly furnished us with the following information regarding the subject of our illustration:

This plant produces the beautiful substance known as rice paper; it has soft, downy palmate leaves; it grows ten feet high, with a stem four inches in diameter, full of white pith like the elder; in a full grown specimen the pith is about one inch in diameter. It is divided into pieces three inches long, and by the aid of a sharp instrument is unrolled, forming the thin narrow sheets known as rice paper, greatly used by the Chinese for drawing figures of plants and animals, and also for making artificial flowers. Until about 1850 the source of this substance was unknown to scientists. The Chinese, on inquiry, gave very fanciful figures and descriptions of it, illustrating the fact that then, as now, "for ways that are dark and for tricks that are vain, the heathen Chinee is peculiar." It was first introduced from the island of Formosa to Europe, at Kew gardens, in 1853; from there it has been widely disseminated. It is almost naturalized in some parts of Australia. In the southern states, and perhaps California, it will flourish. As an outdoor ornamental foliage plant it is well worthy of cultivation in any section of the country.

It is destined to be a peoples' plant as one-half inch of the root will grow and form a good plant the first season. It has survived most winters for the past five years in this city (Washington, D. C.)

New York.

Cut flower trade is generally satisfactory. Roses of all kinds have stiffened up slightly in price and the steady demand indicates that the season is fairly under way. The warm weather has been somewhat unfavorable for some varieties of roses, Cusin, La France and Perle seeming to feel the effect especially, there being a good many blown, poor colored or otherwise poor blooms coming in. Some of the Mermets being received at present are noticeably good in color, size and finish. American Beauties of best grade are in short supply and a good many more than the market affords could be sold at fair prices. Violets are much improved. Carnations are very plenty, but there seems to be a place for them all. Harrisii lilies are coming in faster than they can easily be disposed of. Cypripediums also are quite plenty, but a month on the plant makes no difference to these flowers and so they hold their price. Chrysanthemums are about done. There are a good many coming in yet, but they all show a most suspicious weakness of the neck and hang their heads as if ashamed of having outlived their usefulness. Lily of the valley, paper white narcissus and Roman hyacinths are the only "bulb stuff" being received as yet.

The N. Y. *Evening Advertiser* of November 21 devoted a whole column to a well written article on the narcissus that ought to do something towards increasing the popularity of this flower. Some recent notes on roses in the same newspaper, however, are not quite so well done. For instance, it says: "The Brunner rose is coming in. This is a beautiful looking hybrid, but it has no odor. The Madame Hostes rose is now beginning to come quite plentifully. This is a cross between the Niphetos and the Bride." Somebody's rose education has been sadly neglected.

Over at Pitcher & Manda's the cypripedium houses are worthy of a visit. In one house alone there are not less than 2,500 blooms on the center bench, confined almost entirely to varieties of insigne. One of the latter, a new one from a recently imported lot, has been named Robinsonianum in compliment to Mr. Robinson, of North Easton, Mass. The noticeable feature of this variety is a decided pink flush all over the dorsal sepal.

Mr. W. P. Wight, of Madison, has a good test of the merits of his new bench tile at his greenhouses. A bench of American Beauties fitted with the tile and one with the ordinary board bottom are planted alongside each other and a comparison shows decidedly to the advantage of the tile bench. Madison is still growing as a cut flower producing center. There are now 42 regular shippers of flowers for the New York market in the town.

The New York Florists' Bowling Club has tried the new pins and balls won at the recent tournament with the Philadelphia Club and are very much pleased with their prize.

Mr. John R. Johnson, of U. S. Nurseries, left for England on the steamer Majestic on December 2, to be absent about six weeks. He intends to have a good time.

Boston.

A recent Sunday edition of the Boston *Globe* gave nearly two columns of space to a description of the orchid collection of Mr. F. L. Ames. It was an interesting and readable article, and all right except as to the names of the plants and there the writer, as is usually the case, got badly used up.

At Mr. C. V. Whitten's establishment in Dorchester the roses are in good shape and appearances indicate that Mr. Lawrence Cotter, the gardener, will this winter continue to uphold his reputation for sending first class roses to the city. A fine house of Mermets, one of Brides and Cooks and one of Hostes are now in full crop. A house of Albanys treated as hybrids is starting off well, and there are several houses of Brunners in various stages. The first dozen of Brunners was cut on December 2. There are fourteen greenhouses on the place, seven of which are heated by hot water and seven by steam, Exeter system, so that there is a good opportunity to test the comparative value of the two methods. Mr. Cotter states that he estimates a saving of thirty tons of coal annually in favor of the steam.

Lucius H. Foster has 13,000 violets planted in the houses this season, and they look promising. A house of bouvardia here is just in full bloom.

Quite a good representation of the fraternity was present at the celebration of Jackson Dawson's silver wedding. Most of the gentlemen were accompanied by their wives and they all enjoyed themselves thoroughly. Mr. and Mrs. Dawson were well remembered, the presents being very numerous, and if all the good wishes expressed by their friends should be realized there is no doubt that when their golden wedding anniversary comes round the occasion will be fully as enjoyable as was this.

The public winter meeting of the State Board of Agriculture was held at Horticultural Hall on December 1, 2 and 3. Many valuable papers were read, including one by Prof. L. H. Bailey, of Cornell University, on the crossing of plants.

The December meeting of the Gardeners' and Florists' Club was not attended as well as usual, Mr. Dawson's affair coming on the same evening. The principal business transacted was the defeat of the proposed amendment to the constitution changing the name of the organization to The Gardeners' and Florists' Educational Association.

Among the notable visitors the past week were Mr. J. N. May and Mr. Jos. E. Rolker.

Philadelphia.

Mr. W. K. Harris' new chrysanthemum Eva Hoyt is a magnificent incurved yellow, equal to Widener in size and a more striking flower. It is hardly in when the latter is all cut out and ought to sell well.

Robert Craig's Louis C. Madeira is also a very fine variety; it will attract attention everywhere. In color it is light yellow, incurved, very double and when fully expanded the flowers are as round as a ball and about three inches in diameter. They are borne on a good heavy stem. What is wanted now is a good late white, similar to Ivory or Domination.

Small ferns, with the exception of Adiantum cuneatum, are very scarce. We refer to 3-inch stuff for fern dishes. The demand is greater than the supply.

Palms are moving lively in spite of predictions about the extra large arecas that were going to be left for want of a market for such stock. There are no more to be had; they are all in the hands of retailers or perhaps sold by this time. Stocks of other varieties in large sizes are also very low.

The regular meeting of the Florists' Club was held Tuesday evening, Dec. 1. There was a large attendance, some 50 members being present.

A proposed amendment to the constitution whereby others than those connected with the florist business could become members was overwhelmingly defeated.

The Club button as presented by the committee and adopted by the Club was delivered to members. It is of blue enamel, five-eighths of an inch in diameter, with a white band one-eighth of an inch across the center. The words "Phila. Club" in gilt are on the blue enamel, with the letter "F" across the white band in the center, also in gilt. The design as a whole is neat and much admired.

The following gentlemen were elected to membership: Edward Lucking, Bernhard Wolf, of Phila.; Adolph Farnwold, Wyncote, Pa.; George Paullin, Bridgeton, N. J.

The following were proposed for election at next meeting: J. W. Bitner, Lancaster; W. R. Smith, Washington, D. C.;

FATSIA OR ARALIA PAPYRIFERA.

W. J. Stewart, Boston; F. W. Clinton, James Smith, Chas. Hopham, Edward Mason and Albert Guillerman, of Phila.

A standing committee of three was appointed whose business it will be to pass on all applications for membership before they are presented to the club.

The committee on essays selected the following subject for the next meeting: "The commercial aspect of the florist business in Philadelphia," which was assigned to C. H. Grigg.

The essavist of the evening, Robt. Kift, then read his paper on "Magic and Flowers," which was well received and ordered to be sent to the AMERICAN FLORIST for publication.

[The paper will appear in our next ssue.—ED.]

Indianapolis, Ind.

The Indianapolis Florists' Club at the meeting Dec. 2 adjourned and attended the State Horticultural Society's meeting, it being their annual meeting. It is proposed that the State Florists' and Horticultural Societies shall work together to get proper accommodations at the new State Fair grounds to be opened soon; also an arrangement will be made to have a joint exhibit of fruits and flowers at the next chrysanthemum show.

The results of our last exhibition were in round figures: Receipts $2,800, expenses $2,700. It would be of interest to have other exhibitions state their receipts and expenses.

Remarks heard from customers that were at the show: One lady remarked that less colors should be used in the decorations; another that only the best music should be engaged. It would be hard to improve in that respect unless we engage Gilmore or Theo. Thomas. I think it would be well to have music in the afternoon as well as evening. I suppose a great many have noticed how dull everthing seems to be in the hall on a dark gloomy afternoon.

Carnations are coming in in vast quantities and they are immense in size, of beautiful shades and most delicious fragrance. Don't think Indiana can be beat in this respect.

E. G. Hill during his recent visit to this city showed a red seedling chrysanthemum that will create unusual interest next year on account of its velvety brilliance and slight fragrance.

Chrysanthemum flowers are holding on longer than ever this year—most too long; other flowers should have a chance.

Thanksgiving trade was good.

The committee to be appointed by President Dorner for the next chrysanthemum show will meet in this city in January.

W. B.

Chicago.

The Horticultural Society of Chicago is considering a plan for a spring exhibition on a somewhat novel plan. It is proposed to hold the exhibition in the new conservatory at Lincoln Park, March 26 to April 3, the exhibition to be "the opening" of the conservatory to the public. Being a public building no admission fee can be charged, but it is thought that no difficulty will be found in raising sufficient money for an adequate premium list and as there will be no other expenses except the cost of printing the list no further funds will be needed. A special meeting of the Florist Club was held last Thursday evening to consider the question as to whether a creditable display could be made with the time at disposal for preparation and the Club decided that while earlier notice would have been advisable a creditable display could still be made, and recommended the dates above noted as most advisable for the exhibition.

Mr. R. J. Mendenhall, of Minneapolis, is spending a few days at the Lincoln Park Sanitarium and receiving treatment for rheumatism.

Mr. N. F. McCarthy, of Boston, visited the trade here last week in the interests of the Boston Florist Letter Co.

New Jersey Social Florists' Club.

This organization on Saturday eve, Nov. 21, commemorated the opening of their bowling alleys two years ago with a "social" held at the rooms of the club. The occasion was a very enjoyable one in spite of the fact that Mr. McRorie, who is the club's banjoist, was unable to be present, and Mr. Sampson, who manipulates the harmonica, was also prevented by sickness from attending. It is said that the "Major" filled their places when lunch time came around, however, and took care of their share as well as his own, not wishing to see anything in the sandwich line go to waste.

The regular meeting of the club on Thursday evening, Dec. 3, was well attended. Mr. W. S. Rogers of Short Hills read a very well written and intelligent paper on "Amateur Photography," as applied to horticulture. A comprehensive essay on "Roses as grown in Ireland," by Mr. Hugh Dickson of Belfast, Ireland, was read by President J. N. May. Both papers received a vote of thanks. After the close of the business session bowling was in order, most of those present participating in the fun. The gold medal for the highest score was again won by Mr. Jos. Manda, this being the fourth time Mr. Manda has captured it. It is probable that the club will send a bowling team to Washington next August.

Syracuse, N. Y.

At the annual meeting of the Central New York Horticultural Society the following officers were elected: President, A. D. Perry; Vice-Presidents, Hon. J. J. Belden, Hon. E. B. Judson, W. Brown Smith, H. S. White, J. W. Smith, Thos. Bishop; Executive Committee for three years, P. R. Quinlan and W. Hewson; Treasurer, Peter Kay; Secretary, Henry Youell.

Three new members were elected. The treasurer's report showed a fair balance in the treasury. The secretary's report showed that since the advent of the society three new florists had started, all of whom were doing well, and the older firms had nearly doubled their capacity, which clearly proved that the object of the society, i. e., cultivating the taste for flowers, was being attained.

G. Bartholme has completed his first greenhouse, which is 100x20, and has it nicely stocked. He will put up more glass in the spring. He has rented several houses near him for the winter. Y.

Washington.

The regular monthly meeting of the Florists' Club on Dec. 1 was not very fully attended, several of our prominent members being detained by severe illness in their families. Vice-President Gauges called the meeting to order, and the final report and settlement of the show matters was discussed and passed upon. Mr. Wm. Clark then arose to propose that the members of the club should in their capacity as individuals assist in the preparations to entertain the coming convention of the S. A. F., as the club has already voted not to take part in its corporate form. Each side of the question explained its position fully, and at times quite peppery language was heard, but good humor finally prevailed, although no yielding of the positions assumed by either side can be discovered. Mr. Clark's suggestion was received by all with the feeling that it was the proper settlement of the question. C.

Rochester.

Geo. Savage is greatly elated over his Cypripedium insigne, there being at the present upwards of two thousand flowers in perfection. There are also a number of beautiful hybrids pushing forth their buds and promise a great deal of interest. In one cozy corner George has a group of seedlings in various stages of development.

Our neighbor Mathews down at Utica also has cause to feel proud of his orchid houses this season. He has been very fortunate and it is a treat to any orchid lover to go through his houses and see the hundreds of Mexican orchids bearing a great profusion of spikes. His white Lælia anceps are also in fine condition.

Rose Slugs.

The Missouri State Horticultural Society met at Sedalia Dec. 1, 2 and 3 with a good attendance and a fine display of fruit.

The following extract from a paper on "Insecticides and Fungicides," read by Mr. J. C. Duffey of the Missouri Botanical Garden may be of interest to the readers of the FLORIST:

ROSE SLUGS.

In the spring of 1890 the rose bushes of the Garden were divided into four parts and as soon as the eggs of the rose slug began to hatch were treated as follows:

Division one with whale oil soap 1 pound, sulphur 1 pound, water 5 gallons; division two, paris green ¾ ounce, water 10 gallons; division three, paris green ½ ounce, water 10 gallons; division four, white hellebore 1 ounce, water 3 gallons.

Each of these mixtures entirely destroyed the rose slug and the foliage remained fresh and green throughout the season, while a few bushes left as checks had all the foliage destroyed. A second treatment of hellebore was given for the second brood.

This year two treatments with hellebore kept the rose bushes free from slugs.

S. A. F.

The report of the Toronto meeting has been mailed to all members in good standing. Any member entitled to the same who has not yet received it should notify Secretary Stewart at once. Those whose dues for 1891 are unpaid should forward the amount to the secretary and receive the report, which is in many respects the most valuable ever issued by the society.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—As foreman, by an experienced grower of palms, ferns, roses, carnations, etc., and early forcing of flowers. Address W, care American Florist, Chicago

SITUATION WANTED—By an active young man of sober habits; 5 years' experience in growing cut flowers and bedding plants. Good reference. Address A F, care American Florist, Chicago.

Address THE AMERICAN FLORIST CO., Chicago.

"DEVOTED to woodcraft and what fun we can grab in our rush for the almighty dollar," is the line that appears under the title of *The Woodsman*, an infant monthly journal that has sent forth its first "wail" from Evergreen, Ala., under date of Nov. 1. "Caldwell the Woodsman" is editor and publisher, and he has adorned the columns of the initial number with some of his best productions, in his breeziest and most humorous style. And he promises to in future numbers also thus "sugar coat the great big musty chunks of wisdom" he will present to his readers. The subscription price is 50 cents a year.

VICK'S MONTHLY with the November issue appears radically changed in form. The pages are now about the size of those of the FLORIST, and the style of make up is quite different from that followed by this magazine for many years past.

"A FLORIST," New Bedford, Mass., will please take notice that we pay no attention to anonymous communications.

News Notes.

MERIDEN, CONN.—Michael Galvin, the florist of Kensington avenue, was badly injured in a runaway two weeks ago while transporting a load of chrysanthemums to be used in a wedding decoration.

BURNSIDE, KY.—Ellis Stephenson has gone out of business, and there is now no one in the trade here, so postage will be saved by sending no trade lists etc. to this place. Mr. Stephenson is now at Bovard, Pa.

ST. JOSEPH, MO.—Mr. Hans Nielson had the misfortune to have the south ends of several of his greenhouses burned the night of November 29, occasioned by the burning of a street car barn in close proximity to his houses.

BIRMINGHAM, ALA.—A chrysanthemum show was held the last week in November in the Woman's Exchange building, under the management of Florist W. H. Lindsay. One half the proceeds went to the United Churches of the city.

DENVER, COLO.—Mrs. H. E. Chamberlain of the Wheat Ridge greenhouses has purchased the florist establishment of F. T. Rushmore at No. 1626 Welton street and will hereafter conduct it. Mrs. C. L. White will remain in charge of the city store.

ELGIN, ILL.—Souster & Co. is a new firm of florists that have started in here recently. They have erected 10,000 feet of glass, putting up the houses in first class shape. The bulk of the glass will be devoted to the growing of cut flowers. Hot water is used for heating.

LOS ANGELES, CAL.—The receipts at the chrysanthemum show of the Southern California Horticultural Society were $1,031 and the disbursements $984.50. The society has decided to hold a spring show the last week of April next. A total of over $500 will be offered in premiums.

EAST LIVERPOOL, O.—The first chrysanthemum show ever seen in this city was given by Florist Robt. Luepke November 7 to 11, for the benefit of the Epsworth League. He exhibited some 600 plants in from 4 to 10-inch pots, and the display was admired by a large number of visitors.

DELAWARE, O.—At a meeting held Nov. 24 the Delaware Chrysanthemum Society was organized with officers as follows: D. Grinton, Pres.; Miss Ida Newell, Sec'y; Jos. Cunningham, Treas.; D. B. Stevenson, Correspondent. Plans are already under consideration for a chrysanthemum show next year.

OMAHA, NEB.—There was some talk of having a chrysanthemum show here this season, but it had to be given up as the matter was not taken up in time to make proper preparations. But the matter is in mind now and an attempt will be made to get the florists to organize and prepare for an exhibition next year.

KINGSTON, MD.—Thomas G. Harold, the florist and shipper of holly at Kingston, Md., died on November 29 after a lingering illness of nearly two months. Mr. Harold has been in poor health for two years. His son J. H. Harold, is at present in charge of the business, which will probably be closed out before spring.

WICHITA, KANS.—Mr. C. A. Rose, of 404 N. Water street, and Chas. P. Mueller, the Fairmount florist, have combined and the firm style will be Rose & Mueller, the Fairmount florists. Mr. Rose takes charge of the cut flower department and Mr. Mueller of the greenhouses. They have one of the largest and best equipped greenhouse establishments in Kansas.

ROCHESTER, N. Y.—Mr. John B. Keller has retired from business, being succeeded by his two sons, F. J. and M. J., who have adopted the firm name of John B. Keller Sons. George J. Keller, another son, has started in business for himself at 309 Mount Hope avenue, with about 3,500 feet of glass. Mr. G. J. Keller was married Nov. 19, the bride being Miss Mary A. Weber.

SAN FRANCISCO.—The Florist Club at its last meeting discussed the practice of certain alleged florists in soliciting funeral work from homes where a death had occured and decided to publicly place the stamp of its disapproval upon such methods. At the next meeting an attempt will be made to devise ways and means to prevent the trade from being disgraced by a continuance of the practice.

SPRINGFIELD, MO.—W. A. Chalfant has erected a new greenhouse 100x18½ with iron frame, ventilating apparatus, etc. It is divided into two compartments with the heating arrangements so adjusted as to give a difference of from 10° to 15° in the temperature of the divisions. Mr. Chalfant gave a chrysanthemum show November 7 to 11 and had 125 varieties in bloom at the time, some of the flowers being exceedingly well done.

CINCINNATI.—At the last meeting of the Cincinnati Florists' Society it was decided to give a chrysanthemum show next year. Much enthusiasm was shown and a guarantee fund being suggested $400 was signed in a few moments by those present. More to follow. Quite a delegation from this city attended the Indianapolis show and they can't say enough in its praise. But keep your eye on this city for we are going to have the finest show on earth in '92.

DENVER, COLO.—Tesch & Larson, of Berkeley Park, have sold out to Wm. H. Smith & Son, who will continue the business. Mr. Larson remains as manager. Bills against the firm of Tesch & Larson will be paid by James G. Tesch, room 47, Symes Block, Denver. The Denver Florist and Fruit Co. have built eight houses of which five are 100x12 and three 100x18 each, heated by two 45-horse power boilers. This company had a grand opening at their 16th street store November 23.

SPRINGFIELD, MASS.—The Hampden County Hort. Society held its annual meeting Nov. 24 and elected officers for the ensuing year as follows: E. S. Brewer, president; R. H. Smith, C. W. Bryan and J. D. Cadle, vice-presidents; Gurdon Bill, treasurer; W. F. Gale, secretary. The treasurer reported a balance of over $3,000 in the treasury. It was suggested by the president that a juvenile department be added, also that the June show be discontinued that every energy might be concentrated on the November exhibition.

SPRINGFIELD, O.—Mr. Henry Kauffman died November 28 from kidney trouble, aged 48 years. His son Albert will continue the business. The mother of the Wilson Bros. died November 27 after a lingering illness. Miss Emma A. Baker has opened a floral store in the Arcade building. She formerly represented J. B. Heiss of Dayton. Good & Reese have added seven new houses 106x20 each, and McGregor Bros. are laying the foundations for five more houses 100x22 each. All heated by steam. A. R. Aldrich gave a chrysanthemum show that was largely attended.

NEW BRITAIN, CONN.—At the annual meeting of the New Britain Hort. Society December 1, officers for the ensuing year were elected as follows: John Gerard, president; Mrs. C. A. Shepard, vice-president; E. M. Hulbert, secretary and treasurer. The membership of the society has steadily increased during the past year, the society now numbering 88 active members. During the year past the society has held two private and three public shows. The constitution has been amended to admit persons under 16 years of age to junior membership, and it is hoped that this section will become one of the strong features of the society.

PITTSBURG.—About twenty members of the P. and A. Florists' and Gardeners' Club, by invitation of Pres. E. C. Reineman, spent a most enjoyable evening at his bowling alleys in Mt. Troy December 2. It was surprising to see how well the balls were managed, and if the members of the club would practice some they would undoubtedly carry off the cup at next year's bowling contest of the S. A. F. if they compete, which is to be hoped for. After partaking of an elegant lunch and being treated to a few speeches by the boys, the party broke up about midnight, and no doubt some of the members felt pretty well broken up next morning after such violent exercise.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

Wife Wanted.

Below is a copy of a letter received by John A. Salzer Seed Co. Mr. Henry A. Salzer, the manager, says he presented the matter to the ladies of his establishment, but all declined with thanks, yet all agreed that they would not now need to go through life without having received "an offer of marriage."

WAYNE, NEB., Nov. 12, '91.

DEAR MR. SALZER,

For several years I have received my seeds etc. from you. Now then to the point. I live in a region sparsely settled with girls—they are extremely scarce here and I want to marry and haven't time to look up a girl, so I thought I'd write to you, as from the large number in your employ you must be able to furnish me a wife. I'm 34 years old, tall, blue eyes, black hair, own 160 acres land, 242 bushels wheat, 120 bushels oats, 4 horses, 3 colts, 50 hogs. That is all I know to write. Please answer soon whether you can furnish me a wife. My address is

——— ———, Wayne, Neb.

MR. D. M. FERRY is reported to carry life insurance to the amount of $150,000.

Fine Cyclamens.

We notice in your issue of October 29 an article on the cyclamen in which it is stated that the old favorite has been neglected. Undoubtedly this is true as to some localities, but here in Cincinnati we have a man who grows them to perfection, Mr. John Rose, with Mr. F. T. McFadden. Never have there been seen on this or any other continent plants grown to such perfection. These specimen plants will produce at least 150 blooms. Imagine a cyclamen plant seven feet in circumference. These plants wholesale at $9, $12, $18 and $24 a dozen, the very largest at $3 each and sell quick.

Cincinnati. E. G. GILLETT.

TO THE TRADE.

BOOK-KEEPER, twelve years' experience in every branch of the Nursery and Seed business, desires position. Not afraid of work. Accurate and a good penman. Abstainer. Can furnish A 1 references. Address

PANCRATIUM CARIBBAEUM.

(The Great Spider Lily.)

This was one of the best selling novelties last season, and not only sold, but gave **SATISFACTION** to the purchasers. Thousands of bulbs have bloomed freely in all parts of the country. Every **LIVE FLORIST** will catalogue it this season, and to meet the popular demand we have secured 250,000 bulbs of blooming size.

We offer these at $3.00 per 100; $22.50 per 1000, packed and delivered f. o. b.

We also have a few bulbs of the **CRINUM NOBILE** that great average over 2 lbs. weight, at $35 per 100, and some fine **CRINUM AMERICANUM** at $7 per 100. These bulbs are all first quality and size. Order now, and be in time to insure your supply.

Planting Now for Christmas Flowers.

What shall we do with that class in the trade who order stuff out of season and then kick because it didn't pan out according to their expectations?

What do you think of a party ordering at this date (Dec. 1) field grown carnation plants, violet clumps and forcing roses, all to be benched and grown for Christmas flowers? Yet we had such an order, and just such fool orders are not at all uncommon.

Result: Plants arrive, are planted, no flowers for Christmas. Then come kicks. "My plants had the best of attention, but I did not sell a dollar's worth of flowers from them. Think the stock must have been diseased," etc., etc.

What think you of people who order Pandanus Veitchii and other tropical stuff shipped in refrigerator cars, by freight, to the wild and wooly west at this season of the year, the stuff to be possibly 10 or 12 days en route?

Can't these people be made to understand that *money is saved* by getting stock in season or not at all.

There is money saved, worry saved and life extended, by doing greenhouse work at the right time. ZINGIBER.

[Language is inadequate to express our thoughts regarding any one who will undertake to bench roses, carnations and violets on Dec. 1 and expect a Christmas crop from them. Certainly such cannot be readers of the FLORIST. But there are a great many in the trade who should ponder on the last paragraph of the above communication. There is concealed in those few words a big solid chunk of wisdom. But the great failing of humanity is not ignorance but neglect to profit by what they really do know.—ED.]

Removing Paint Shading From Glass.

Can some reader of the FLORIST tell me of some better way to remove oil paint shading from glass than lye wash?

J. S.

THE AMERICAN FLORIST CO.

WILL PUBLISH A

CORRECTED EDITION OF THE

DIRECTORY

OF

FLORISTS, NURSERYMEN AND SEEDSMEN

of the United States and Canada

FOR 1892

ABOUT JANUARY 1, NEXT.

We shall cover the whole country by correspondence and compile an entirely new list which will be as nearly correct up to date as it can possibly be made. But in addition to this we invite corrections from anyone in the trade.

As usual, we shall devote some of the pages to advertisements. Rates given on application. The price of the new book will be $2.00.

Preserving Greenhouse Benches.

Several times of late it has been asserted in your columns that crude petroleum was an excellent thing to apply to greenhouse benches to preserve them from rotting. I can not speak from personal experience on the subject, but have been told by those who have used it and have also read that it is useless and adds no length to the age of a bench, and am inclined to believe that the latter opinion is the true one, for in a year or so the oil is entirely evaporated.

About ten years ago I read, dreamed or discovered that water lime (hydraulic cement) was a great preservative of wood and I am sure I have saved several hundreds of dollars by its use. The life of a common pine or hemlock bench one inch thick is with me about four years, used for ordinary purposes. Nine years ago I first tried the cement on a bench which has been used summer and winter ever since, some times with six inches of sod, other times with sand and ashes. That bench has never had a board repaired in it for nine years and I think it is good for another year at least. It is safe to say the cement will preserve a bench twice as long as without it. The expense is not worth considering. It costs here (in Buffalo) $1 per barrel and a barrel will do at least 3,000 square feet of bench surface. It should be put on just as thick as it can be spread with a whitewash brush and not much mixed at a time as it soon "sets" in the bottom of the pail. It is time and money well spent to apply it to all parts of the benches, tops of the legs, surface of the cross pieces, in fact wherever the wood comes together. With a little common lime added it is an excellent thing to put on the inside surface of greenhouse walls. It makes the walls plenty white enough and will long outlast paint or common whitewash made of quick lime. Why the cement should be an excellent preventive of rot is I think plain to see. The particles of cement entirely fill up the surface pores of the wood and stop there and prevent water from getting in.

Mention the AMERICAN FLORIST when writing advertisers on this page.

Springfield, Mass.

Some time since two clerks left their employer and with a friend opened a flower store handy by. The proprietor of the old establishment at once reduced prices to such a figure as to prevent, if possible, "the boys" from making a success of it. The boys naturally had to follow the cut, and in the rivalry between the two establishments retail prices of cut flowers have been quoted and advertised which are below the wholesale rates on those flowers.

Such proceedings not only injure the business locally, but as the two concerns have spread their prices broadcast, florists in all the neighboring towns have also been made to suffer. The florists' business is a luxury and *should* pay a fair profit. There can be just as many flowers sold at a reasonable price as there can at "killing" prices.

Flower buyers will pay a little more and buy just as many. Flowers presented to the public in an attractive manner at a moderate price will *sell*, and cutting prices will not help increase the till. At Toronto last summer a grower was asked what he did with his over stock—referring to geraniums. His answer was "I use them for compost." He sold what he could at $10 per 100 from 4-inch pots and as he took pains in growing he presented a good plant and generally sold out. So with cut flowers. Sell a good article as a fair price and use the remainder for compost. You will have just as much money at the end of the season, less work, and more satisfaction in every way. VIDI.

Dove Manure.

In reply to query regarding the use of dove manure, I would say that I use it in considerable quantities with most satisfactory results. On pot plants I apply it in powdered form, sifted, one teaspoonful to a 3-inch pot, not more. Pots of larger size in proportion.

For roses, geraniums, carnations, heliotropes, fuchsias, and all soft wooded plants it can be used, in moderation, with good results. ALBERT DIRWANGER.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser in these columns.

J. Horace McFarland Company.

INCORPORATED 1891.

How does that look? It means that I have got to say "we" now, because there are more of "us"; but I'm in good company, I believe! Well, then, "we" are bigger than J. H. McF. all by himself, and we've enlarged, increased and extended his facilities for doing the right sort of printing for florists and the other plant and tree people. A fine new electrotyping outfit and a lot of other new machinery will help the Company to keep J. H. McF. hustling after work, and doing it! The florists are responsible for this move, and they want to notice that we're ready to do Catalogues in great shape at the Mount Pleasant Printery, and do them on time. Write to

J. HORACE McFARLAND COMPANY, Harrisburg, Pa.

[*P. S. by J. H. McF.*—The "we" will go better after a bit. Just notice that I'm right "in it" yet, at the same old stand, and the others are helping me to do better for all of us, and you!]

EMPLOYES of florists when subscribing or renewing their subscriptions will oblige us by writing on the printed letter head or bill head of their employers. It is not our intention to exclude employes from our subscription list. This, to those who seem to have misinterpreted the printed postal card notice that we send in response to subscriptions from those whose names do not appear in our directory list. If you are in the employ of a florist you are in the business as a "means of revenue" just as well as your employer and hence entitled to the paper.

Positive Primary Color in Flowers.

We are all of us quite anxious to know something about color for its *own sake*; we wish that there could be something we knew positively about it, so that there could be no shadow of doubt in our minds, no lingering uncertainty. I fear we ask a great deal even in asking so little. There does not seem to be any absolute certainty even among those who can speak with authority about color, and as the old saying goes:

"Who shall decide when doctors disagree?"

Sometimes it becomes imperatively necessary for us to decide matters for ourselves and learn to be self-reliant—yet we crave high authority as the ancient Hebrews did a king, only to find themselves when possessed of one in no way bettered, but rather a little worse for the experience. However, experience is a great teacher and we have a vast amount of knowledge of the snags left behind us when experience is at the helm.

I do not know how much I may have learned from the scientists who have written about color, but I *do* know that I learned a great deal from experience and practice with the colors themselves; and flowers, even more than paints, have proved the best medium through which that knowledge has been attained.

But the positivism of color, how can we know of that? We say this violet is blue, that rose red, yonder marigold yellow. What do we mean? The assertion is specific and positive. Twenty red roses possess twenty different tones of red, and even the one to which we point has more than a dozen tones of red in its composition. It is all very bewildering; yet we are positive that the rose is red and what is more, the scientist says so and further gives us an elaborate analysis of all the different tones of the *one* color we are anxious to designate by *one* definite name. We are continually asking which is the pure red or the pure yellow or the pure blue flower, when not even the scientist would dare designate the flower without mentioning some contingency.

In my opinion, if it is our wish to become well acquainted with color, particularly flower color, we will do best to study it from the artistic and not the scientific point of view. It is perfectly true that up to a certain point, which includes fundamental principles, the scientific study of color is very helpful and necessary, but beyond this point the paint-box and not the laboratory is the most fruitful field for yielding solid, practical and valuable results. No possible knowledge of the composition of color will enable us to place together two or more colors which are artistically harmonious; and this above everything else is just what we all of us want to learn how to do. Even our anxiety to obtain definite names for definite colors is completely overshadowed by the stronger wish to understand the secret of their harmonious relationship.

Now let us try to discover if we can some small portion of this secret. Why is it that nature nearly always puts yellow stamens in her white flowers? Why is it that nearly all of her white flowers are *not* a colorless pure white? Why is it difficult for us to find a positively blue or positively yellow flower? What is the reason that there is such a multitude, such an infinity of color tones in the flowers, on the earth, over the sea, in the sky, everywhere? What a perplexing, changeable, evasive thing the whole world of color is! What is the reason of it all? Simply this: Nature abhors the commonplace, she despises crude red, yellow and blue. Variety she *will* have; harmony she insists upon; positivism she only employs to emphasive her love of the infinite. Thus, we have one rather questionably perfect yellow marigold and a dozen others, which have more orange in them than yellow; one scarlet-lake colored gladiolus and an infinity of red roses, which cannot be called anything which is an approach to the pure red color which scarlet-lake nearest resembles. We have the forget-me-not, which is nearly a true blue, but we have a host of so-called blue flowers, every one of which has barely 50 per cent of the true sky-blue in its composition.

It seems as though in the face of these facts it would be hardly possible to designate any special flowers which possess the so-called primary colors in an absolutely pure form. Yet, notwithstanding this difficulty, there are innumerable hosts of flowers which possess color sufficiently positive to merit distinct names. The Cullingfordii chrysanthemum is undoubtedly a rich maroon-crimson color; the inside of the petal of the Jacque rose is even a richer and deeper crimson. The common buttercup is nearly yellow, but would better be specified as a golden yellow flower; the inside lining of its petal is so heavily varnished, or rather burnished, that the reflection from petal to petal produces a yellow encroaching on the orange tone, but for all this there is an individuality and positivism about the buttercup's color deserving the standard name of golden yellow. Then there is the blue violet—blue only in name, because the purity of blue as we see it in the sky at an angle of 45 degrees from the sun on a clear day has no place on the violet's petal. There is some red in the violet's blue, in short we would better speak of this color as violet-blue. There are eyes as blue as violets, but the *bluest* eye must be as blue as the sky.

There are greens in abundance, names for them, too, significant and appropriate. We are accustomed to the terms, pea green, apple green, olive green, emerald

green, sage green, Nile green and grass green. How utterly unlike each other are all these tones of one color, yet which one shall we designate as the standard green? Emerald? Yes, perhaps so. But the so-called emerald green in my paint-box is no more like the color of the precious stone than the lamp light is like electric light. For that matter I am not sure that either the precious stone or the pigment are in color anything like the green seen in the solar spectrum and it is from the *spectrum* that we are supposed to obtain our authority in the question of color.

All this shows us how far we can rely on a name. For my own part, as an artist, I always refer the name emerald green to the pigment in my paint-box and *never* to the precious stone. The pigment never varies appreciably in tone and conveys to my mind a positive idea of a certain color. Therefore I am prone to consider it a standard green. Now, when I say that I know of no vegetable green exactly like my paint called emerald green (taking it for granted that the latter *is* nearly like the spectrum green), I think that I have covered the whole ground in this argument about the *want* of positive primary color among flowers. Nature is elusive and perhaps coquettish; she makes the emerald green in my paint-box a positive necessity, if I would copy the curling wave of the ocean, the dainty yet strong stem of the calla, the neck of the peacock, the stretch of river meadow in spring and the depths of the maple shaded pool at the edge of the wood; yet it is an actual fact that I cannot put my finger on, or in, any one of these objects and say decisively *this* is emerald green and therefore a pure green.

We are so far convinced, perhaps, that the positive in color is in a great sense a limitation. So we may comfort ourselves with the thought that the simplest positive colors never seem to harmonize with each other; they are, to tell the truth, too complete in themselves. If we will take the trouble to place together some of our red and blue flowers, say red roses and blue iris or violets, or some of our yellow and red flowers, say marigolds and red gladioli, we will not need to explain why such flowers do not look well together. The experiment will be a sufficient answer; the color combination will be so crude that we will instinctively effect a separation of the belligerants as soon as possible.

If it is the fact that such powerfully colored flowers do not agree well with each other, what are we to do with them? That is not a difficult question to answer. Your Jacque roses have all the supplementary color they need in their own beautiful green foliage; a large mass of them, a glorious group where the intense glowing red is broken slightly with a deft bit of green is all sufficient; such flowers in a simple large bowl or tall vase would attract greater notice than any costly made up affair.

How characteristic, too, and complete in itself is the stately calla, and what a mistake to allow its association with any other company, no matter how fair; the green stalk and the graceful leaf each need attention and should not be hidden by massing the flowers as we might have permitted ourselves to mass the Jacque roses. Here we may permit ourselves the use of a tall cylindrical yellow vase, if there is one to be had, and the pretty golden spadix of the flower will be harmoniously supplemented by the yellow crockery. The calla even though it is white possesses something very positive both in form and color effect and I have never seen it used judiciously with any other flower.

The Jardin des Plantes and the Cullingfordii chrysanthemums are each strong colored beauties which it would be best to leave to their own power of color; there is no advantage to be gained in mixing either white with the gorgeous yellow flower or pale crimson with the wine colored flower; invariably these two varieties of chrysanthemums will look best alone; only the blue and white Japanese vase or the tall, dull brick-red jar can contribute any additional color without injury to the flower itself. I do not say that some other arrangement for these positive colored flowers will be an artistic impossibility; I simply suggest what seems to me to be the best plan for treatment of their strong color effect.

There is one principle or theory which it is always safe to assume in the treatment of color in flower groups; that is this: Delicacy and strength do not look well beside each other. Your dainty, airy, pink poppy has nothing in common with your rich crimson dahlia. The two flowers are out of tune one with the other and the result is discord.

When once we discover the secret of harmony among a *few* flowers we shall have obtained the strong wedge wherewith the formidable log of the "color question" can be split in sunder.

F. SCHUYLER MATHEWS.

Louis Menand.

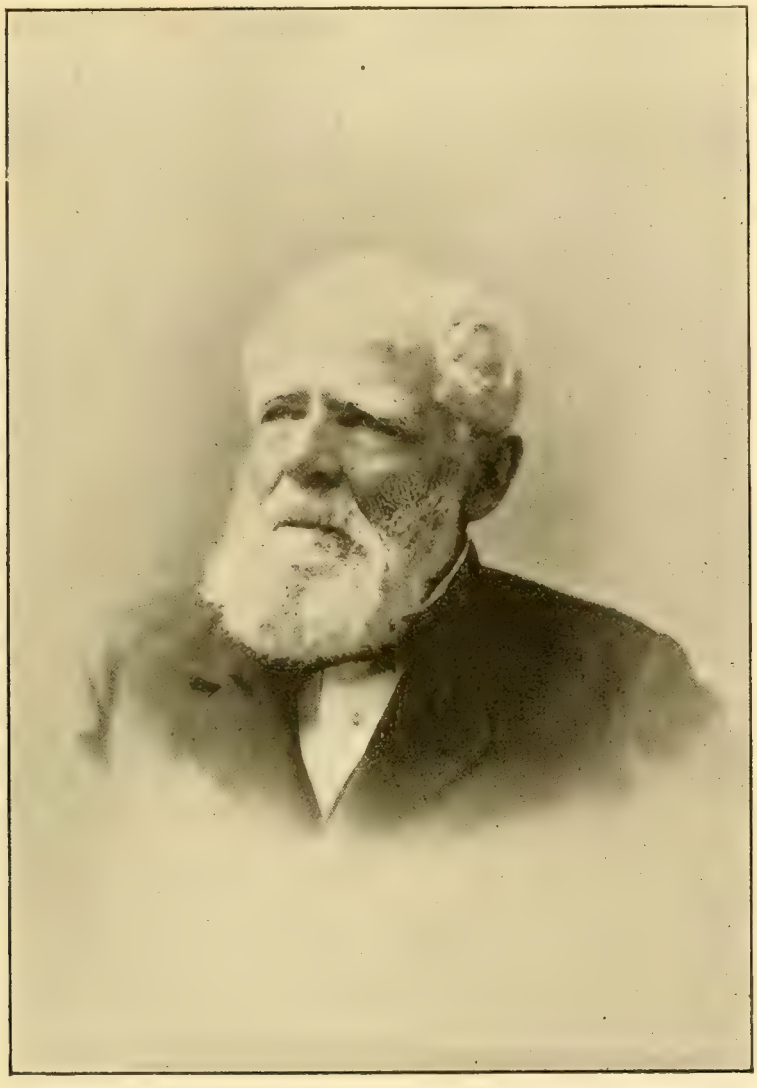
Who in the trade has not heard of Louis Menand? He has been a commanding figure in American horticultural circles for so many years, and his voice when heard has been so uniformly for what is truest and best in our art, that he has been aptly named "The grand old man" of the gardeners' craft in this country.

Mr. Menand is now in his 85th year and as he came to America in 1837 he enjoys a retrospective view of American horticulture that extends over a period of nearly 55 years—over half a century—and what wonderful changes have taken place in that time!

The venerable practitioner of the "Art that doth mend nature" is now living quietly at his home near Albany, N. Y., is still active and takes as keen an interest as ever in the profession he has followed and loved all his long life.

We have much pleasure in presenting in this issue a very excellent portrait of Mr. Menand, from a recent photograph, and the first of a series of papers embodying many interesting personal recollections which he has prepared at our request, and which we are sure will be of very great interest to our readers.

Personal Recollections of Louis Menand.



I.

I have been told that I was born on the 2nd of August, 1807, in the old province of France called Burgundy, a country noted for her good wine, probably one of the reasons I am more partial to wine than to whisky.

My father was a gardener and this somewhat accounts for my early love for horticulture. As far as I can recollect I was about 8 or 9 years old, more or less, when I began to try to grow plants from cuttings. I have always been fond of cutting! properly and figuratively speaking, except cutting my fingers! Besides, I was also very fond of reading books treating of gardening operations, especially the nomenclature—long names that I learned by heart, as parrots do, without knowing the meaning, which constitutes a poor learning. However, later in life I have found these words very useful. I found that "words lead to the knowledge of things." One thing I have never been able to learn is mathematics—I mean that lateral branch of it, "arithmetic," the science "par excellence." Even to-day, with more than three-quarters of a century of - - - - I can not comprehend the mystery of the Trinity! Yet, I have always been able to count the money that has passed through my hands.

Excuse me this digression, and I return to my propagation that I continued to practice until I lost my father. Then I was between 15 and 16 years old, perhaps a little more, I can not ascertain exactly. All that I am certain of is that I remained with my mother and sister until the month of March, 1827, when an idea—many ideas got into my head—that I was old enough to "think for myself" came to me, and that it would be serviceable to know the *sense* of all the words I knew by heart. One thing I knew by experience—the culminating one—that the steeple of my village did not afford me shade or protection enough, or rather too much of it, for I foresaw that ultimately it would "etiolate" my conceptions in the bud! Then I at once came to the conclusion to leave my Penates, my Lares and my other household gods and move to the "capital of the civilized world"—according to the general idea of the French, but not exactly to mine—which was and still is cosmopolitan.

Paris, then, for me was an "Eldorado" where I thought in my puerile innocence that every one was, or ought to be, a philosopher! - - - - or something of that sort. Ah! what a philosophy!! you will soon see. In a few days after I had decided to leave my home I was in Paris, in company with a philosopher! I got acquainted with in the stage-coach, who kindly offered me his services, as he supposed I would not know where to go at such time of night—10 or 11 p. m. When we got out of the stage he hired a cab and told me he was going to carry me to his *hotel!* Before getting into the cab the first sight I had of Paris was such a fog as I had never seen before and never have since. The Parisians called it London fog. I think I could have cut a slice off it. In a few minutes we reached that hotel! located in a narrow, gloomy, dirty street in the "city"—the old Paris—within a few hundred yards of Notre Dame, that church so graphically delineated by Victor Hugo in his wonderful book "Notre Dame de Paris." That hotel looked to me paltry, dirty, cutthroat, etc., etc. That *den* a few years later became famous from having been the spot where the social —— romancer "Eugene Sue" introduced his hero and heroine: Prince Rodolphe and Fleur de Marie, in his marvelous book "Les Mysteres de Paris." I took supper that night and in the morning breakfast bought from a restaurant, with my "cicerone," and never saw him again but six months after by chance in the "Champs Elyses." He made an apology for not having *warned* me of what I would see in that Hotel *du Diable*. Notwithstanding his living in such atmosphere that man was an honest man, for it was on his recommendations, etc. that nothing had happened to me. I slept three nights there. In the day time I ran through the city to deliver some letters of recommendation, etc. During those

LOUIS MENAND

three evenings and nights I learned more than I did thereafter in 10 years.

The same day I left that vestibule of hell I went to take possession of a situation as an assistant gardener in one of the most aristocratic suburbs of Paris, with a different breed of philosophers. There I was somewhat in my dreamed-for element. Many green and hothouses full of rare plants; few of them I knew, except the *names* of some, but I could not apply the names to the plants, and when I attempted to ask the names of the head gardener—a sort of biped bear! he answered me: "You had better to mind your work, for if you have any ambition to be a gentleman's gardener you will do better to learn forcing vegetables," etc. etc. To that hint I replied that I thought it would be better to work for the people who carried on that business, and as I was among plants I wished to know something about them; that gentlemen who wanted forced vegetables wanted also plants, etc. He stared at me with a frown and told me to go to my work pointing with his hand to a certain hothouse; "there you will find that large plant in a tub, that has leaves the shape of a *gardener's trowel!*" - - - was not that description a philosophic circumlocution to avoid telling me the name of it? Inwardly—in my sleeves—I laughed, for I knew the plant and its name. So, as I was in contact with philosophers, I durst, I had the temerity to speak with my mouth open and with my heart also. I humbly replied: "I do not know exactly if I understand rightly; your description is somewhat novel to me and very picturesque. I think you mean the Strelitzia reginæ!" "Who told you that *Mr. The Doctor?*" he responded with a sneer that had a heinous look. From that I had won the sympathy of that charming man. Truly there was no love lost between us. I liberally reciprocated his sentiments toward me. I had been recommended to him by one of his acquaintances to whom I think he was under obligations and he did not like to say he did not want me for he was looking for a man. I thought that he hated me the first time he spoke to me.

When I went in that place I had some *local expressions* that were not very exactly the parent French, and I knew it, but the habit was sticking to me. However, I soon got rid of them—quicker than he had learned French orthography. A few days after the coining of that description of a leaf "like a gardener's trowel," he gave me a chance to retaliate. We were potting some carnations. A young man, with me, were potting, and *he* the "neologist" in *description* was writing the labels, and threw them to us on the floor where we were potting, bent on our knees—no potting bench; I supposed it was for the purpose of doing penance—it was in Lent time! (I feel that I am overstretching). I caught a label spelt wrong and as it was only a few moments since he had laughed at me I thought the occasion was a good one to reciprocate, so I told him that name was incorrect—in my village we spelt it with a double r. "You think so *Mr. The Doctor!*" "I do not *think*, I am *sure* of it!" On that affirmation he started like a runaway horse. The young man with me asked what was the matter with the boss. I told him, "I think he has gone to his room to look in his dictionary to see if I am right." What, right? That young philosopher somewhat belonged to the school of our boss, and thought it childish to get mad for one letter more or less, but he was a philosopher of the *quieta sect* and did not trouble himself any more about the incident. From that time our boss did not make any more jokes on my local expressions but did not like me any better. I remained under his sway about eighteen months, till August, 1828. This closed the first act of my debut in life. Then I changed, in one way for the worse, but every day adding something to my theories of life.

Magic and Flowers.

BY ROBERT KIFT.

[*Read before the Florists' Club of Philadelphia at the December meeting.*]

My first thought was tricks with flowers, but I finally concluded to treat the subject differently. As far back as history will carry us there have been magicians, wonder workers, men who were supposed to be possessed of supernatural powers, giving them a place high among the rulers of the nation. At the same time mention is made of the lavish use of flowers at the entertainments and feasts of the ancients, so that these subjects may be said to be linked together in history.

At the beginning of the world we learn of the beautiful garden of Eden, commonly supposed to contain all the varieties of flowers on earth. Adam has been called the first gardener, as he was placed there to enjoy the enchanting spot and keep out all intruders. Then the gardener was counted among the "upper ten," as Adam was married to the first lady in the land.

It is the enchantment, the magical effect that flowers convey with them that in a great measure makes our business. If it were not for the beautiful sentiments they arouse and are used to voice we fear that many a flower would bloom to "blush unseen" that is now the object of admiration.

"Bring flowers to crown the cup and lute;
Bring flowers—the bride is near;
Bring flowers to sooth the captive's cell;
Bring flowers to strew the bier."

"Flowers so blue and golden,
Stars that in earth's firmament do shine."

"In the cottage of the rudest peasant,
In ancestral homes where crumbling towers,
Speaking of the past unto the present,
Tell us of the ancient games of flowers."

"And with childlike, credulous affection
We behold their tender buds expand,
Emblems of our own great resurrection,
Emblems of a bright and better land."

We might continue to quote volumes of poetry and prose, for flowers have been the favorite theme of poets in all ages.

How often we hear the expression, "yours is a lovely occupation, surrounded continually by such beauty. If I had to choose a business I should certainly be a florist."

"All the praise that has been sung
Is justly due the flower,
But have *we* not some claim against
Some part in nature's dower?"

There is no doubt about flowers being beautiful; perfectly grown they compel admiration, they *make* a place for themselves and it is our business to keep that place filled. Herein lies the magic in the business. To change flowers into money—Ah! that's the trick. We are all magicians, performing our tricks with more or less success, and on the measure of our success depends our reward.

The loving swain's first attentions find expression in the cluster of flowers, blushingly ordered; the effect produced is cause for another and still another, until the best that nature yields is hardly good enough; finally comes the bouquet; presto! what a wonderful change the flowers have wrought, the lovely girl becomes a bride, and presto! another change, the swain disappears, we see him no more; there must be something wrong about the construction of a great many bridal bouquets.

"Oft has the poet's magic tongue
The rose's fair luxuriance sung."

The magicians of Her Majesty, the queen of flowers, are perhaps the most numerous. Their's is a grand calling, waiting on the queen (and what a wait some of them do have), looking for her to come, this way and that, because some one has told them or perhaps they have read about her journeyings in some book or paper. Finally after many disappointments and almost without hope they set out themselves to find her, carefully noting the surroundings as they go; they are after a while in the right path and soon their majesty's treasure box is open to them. But they must remain loyal subjects, carelessness or neglect will not be tolerated and is sure to meet with punishment. The magician of all ages has always courted royalty, to appear before the queen was the height of his ambition and success was almost sure to be crowned with any expressed wish. And so it is to-day. Those in favor with her royal highness, the rose, want for nothing; houses go up, acre after acre is added to their broad domains.

Among the magicians who have become famous through their experiments with the rose are Bennett of England—whose "Bennett," Laing and Her Majesty will ever be fitting monuments to his memory. His trick of turning a few plant into nearly $10,000 remains unequalled, while Prof. Klunder of New York juggled two blossoms of Her Majesty so successfully that they turned into more than their weight in gold.

Peter Henderson, one of our most brilliant performers, caught the golden hued Sunset from the Perle; it was fittingly named, as so soon after his light sank beneath the horizon.

To Magicians May and Taplin we are indebted for The Bride; this fact will ever place them in the front rank of their profession.

The rose is the queen of flowers, but the Bride is the queen of roses.

To the Messrs. Field is due all honor. These capital magicians have given us the American Beauty, a rose in many respects unequalled and more popular to-day than ever before.

We would like to speak of the wonderful transformation scenes which take place in the change of roses into gold; the great expectations that are rudely dashed to the ground; how the experiment fails for want of color (too much sulphur) and another calls the turn too soon and will not let the buds expand; another cannot stem the tide, as he will not cut them long enough and still another waits until the eleventh hour and finds the market glutted or perchance he finds that when he best could do the trick he has nothing to do it with.

But the magician who understands his business, knows just what the public wants and when they want it, is quick to see that this or that trick is not taking and changes his programme accordingly, has no failures, his productions are beautiful and the transformation a complete success.

The carnation wonder worker is about to try and turn his product into gold and this is the way he goes about it: The crop is on and so is the green-fly; to-morrow morning bright and early (so as to catch the first express) the flowers are to be gathered; to-night he smokes and smokes until he says, "surely no fly can live through that"; the flowers are gathered, shipped and received and the grower waits for his gold, but gets what? *Smoke.* The trick has failed. Again he tries, this time no smoke, but into boxes that have done duty at the grocer's he dumps his beauties rare and says "now see the change take place." But, alas! They were so exceedingly spicy that folks really sneezed at them and the magician hung his head. But every day the trick is done, and when done right it always takes. Who ever saw fine long stemmed carnations, with colors bright, the flowers well open, the fragrance unadulterated, but knew the master magician was there and almost saw the gold before the trick was finished.

Then there are the violet conjurers. They have their little trick and some of them do it well, while others in getting ready are in such a hurry they gather all the flowers in sight, plucking even the very babies from their mothers' arms, huddle them in with their older relations and hope everything will come out all right. Another says "that's no way; I can beat that all to pieces and they won't catch me at it either," and in good time when his beautiful large blue (excuse me, I mean purple) beauties are exposed there is a chorus of ohs and ahs. A delightful fragrance spreads abroad, the transformation immediately takes place and the magician is loaded with questions. "Won't you do it again?" "Tell us how you did it." And the next time he is watched more closely, but he continues to astonish his audience and they finally conclude after many surmises that it must be his location.

And so we might continue. There are other magicians that we might speak of, those whose province it is to finish off and complete the work. They have their transformation scenes and produce enchanting effects that are appreciated to a greater or less degree and are rewarded accordingly; but it behooves us all as magicians to see to it that as we go along we leave a record behind us that after the last grand transformation shall have taken place it shall be said of us, "well done."

IT HAS been suggested that a tabulated statement of the receipts and disbursements of the various exhibitions, in the FLORIST, would be helpful in making plans for the exhibitions of next year. We are quite willing to print such a statement if the organizations who gave exhibitions will supply the necessary data and doubt not that many interesting and valuable deductions could be made from the same.

SEND IN your order now for a copy of our new Directory, to be issued next month. Price $2.

Calanthe Culture.

In a recent issue of the FLORIST I called attention to calanthes as a florist's flower, and now I will endeavor to explain as fully as possible the treatment given them by one who never fails in growing them well, namely, G. McWilliam, gardener for Mrs. Lasell, Whitinsville, Mass. His plants this year present a more promising appearance than ever before and he is watching with great interest the flower spikes as they develop to see if they will beat their previous record.

In giving the treatment allow me to take for a starting point the bulbs after flowering. To those who already have some bulbs I would say, as soon as the flower spikes are cut, the bulbs, still in the pots they were grown in, should be placed away in some dry place where there is a temperature ranging from 55° to 60°, and may remain there until such time as they show signs of starting into growth. When this appears they should be seen to at once, and after shaking the old soil from the roots place them in pans or shallow boxes filled with moist sand, in some house where the temperature will be 65° or 70°, and where they will be close to the glass. There they may be left with safety until they begin to show roots, then they should be potted, for this, if deferred too long, is a dangerous operation as the young roots are very tender and easily broken. Great assistance is had from a few of the previous year's roots being left on the bulb, not because there is any vitality in them, but they keep the bulb, when potted, much firmer.

The size of pots needed has to be determined by the grower judging from the size of the bulbs. If the bulbs are large, 6 or 7-inch pots are none too large, with one bulb to each pot. In preparing the pots previous to potting select those having a good large hole in the bottom and fill them with potsherds, or if preferred charcoal, till within three inches of the top; but whatever may be used be sure to make the drainage good, for there is not anything that will cause the foliage to become spotted sooner than bad drainage and its usual result, sour soil.

This done, the next in order comes the potting material, which is very simple and at the command of most every one in the trade. It consists of fibry turf from which most of the soil has been shaken and well decomposed cow manure, in the proportions of about two parts of the former to one of the latter. With this compost fill up the pots till almost level with the top and be sure to make it good and firm, then place your bulb on top and enough to one side to have the young growth come as near the center as possible, thus giving it a better chance. To keep the bulbs securely in their place, which is a very important item, a small piece of stake is necessary, and may by some tying material be fastened to the top of the bulb, thus preventing them from getting raised by the roots pushing their way into the soil. After they have been secured some of the fine compost may be spread around the base of the bulbs to keep the young roots moist until they get a little established.

Having now completed all that is nec-

essary in potting they should be returned as soon as possible to their former temperature, for should the potting room be 15° or 20° colder a prolonged stay would be likely to chill the tender growth, and if once stunted, from whatever cause, all means used to remedy the evil that season would be in vain. Place them as before, near the glass, with the young growths all turned towards the light. From the time they are potted until they fill the pots fairly well with roots some care in watering is necessary so that the soil may not become either dry or sodden, but kept in a nice mellow condition.

When well established, weak manure water, either from the barnyard or guano water, may be given them safely five times a week, and this may be continued until they show signs of losing their foliage, a period when every alert gardener will see that less water is needed, for then the roots begin to be inactive and would only be injured by persistent copious watering.

To keep the foliage clean syringing overhead every bright morning will be found the simplest and best means. Shading at all times from the direct rays of the sun is necessary, for if allowed to strike direct the foliage will be burned and this will greatly check their future progress as well as injure their appearance. During hot days in summer it is impossible to keep the temperature of the house at 70°, but a rise of a few degrees by sun heat will not injure them if the paths are occasionally sprinkled.

As I have carried the reader over a whole summer's work I hope he may derive some benefit from this article even should he not choose to adopt this method of growing them. C. S.

Palm Notes.

Apart from their decorative value there are many members of this noble class of plants that will always occupy a prominent place among exhibition collections, the varied forms of their always graceful foliage entitling them to such distinction.

In fact some of our deservedly famous chrysanthemum shows would be rather flat looking affairs to many artistic eyes, notwithstanding their wealth of bright color, were it not for the enlivening influence of the various groups of palms and other foliage plants. And looking at the exhibition question from a strictly practical standpoint it does not follow that the growing of specimens for this purpose is merely outlay without any benefit, for not only a portion of the outlay may be recovered in premiums, but the reputation of the grower is at the same time extended by such a practical illustration of the results he has achieved, and when the plants have outlived their usefulness as exhibition specimens they may be used up in decorating.

Among the palms well suited for such use are the astrocaryums, notably A. mexicanum, a moderately strong growing species with stem and petioles covered with strong spines, the leaves of a young plant being frequently partly entire, but becoming pinnate as the plant attains age. The leaves of this species are dark green on the upper side and whitish beneath and in a large plant are several feet in length.

Acanthorhiza aculeata, also known as Chamærops stauracantha, is another handsome species and of very distinct character from the above. The leaves of A. aculeata are produced on stout petioles and are nearly round in outline, but divided into narrow segments, the divisions extending right down to the point of connection with the petioles, the color being dark green above and silvery white on the lower surface.

In habit this palm is compact and the foliage being of good texture it will stand considerable abuse, and a noticeable characteristic by which the species may be readily identified is the network of spines by which the stem is surrounded, these being formed from ærial roots, the points of which have developed into spines. Some of the thrinax too may be used to advantage, their fan-shaped leaves having a very light and graceful effect.

Two of the best species of this genus are T. argentea and T. radiata, the latter being perhaps better known as T. elegans, and both of which are comparatively dwarf in habit and remarkably elegant in appearance, their slender stems and petioles being unarmed, thus rendering them much more convenient subjects to handle than the genera mentioned above.

The thrinax are not particularly difficult species to cultivate, though when young some little care should be given in watering, especially during the winter, their roots being somewhat sensitive.

Livistona rotundifolia forms one of the most symmetrical plants in the palm family when in a small state and always excites admiration, its compact appearance and pleasing color being very decided points in its favor.

This may be briefly described as giving the impression of an improved Latania borbonica (or more correctly Livistona chinensis), the leaves of L. rotundifolia being smaller than those of the latter, of lighter color and also more delicate texture, the petioles being armed with short recurved prickles of brownish color.

L. rotundifolia is by no means as hardy as its congener mentioned above and prefers rather light soil and a warm and moist atmosphere.

Latania rubra and L. aurea are also effective plants in a collection, though unfortunately rather slow in growth and requiring strong heat for their satisfactory development.

These two species are somewhat similar in character, though widely distinct in coloring, the stems and ribs of the former being flushed with reddish chocolate color (in some specimens decided red), while those of the latter are deep yellow, the leaves of both attaining considerable size in well grown specimens.

Still another handsome warm house palm is Acanthophœnix crinita, sometimes called Areca crinita, a very graceful plant with long, pinnate leaves of arching habit, the pinnæ being quite closely arranged along the midrib. This species is also well provided with spines, the stem being completely covered with long black spines which have some resemblance to those of stevensonia.

W. H. TAPLIN.

Gladioli.

T. S. M. asks for a list of the best named varieties. The following list is given me in answer to this query by the foremost gladiolus grower in the country:

ABRICOTE.—Large rounded petals, apricot rose tinged with lilac.

ALI.—Tall, compact spike; flowers numerous and perfectly arranged. Upper petals pale creamy rose, pencilled with cherry red; lower ones yellow with rose sheen and finely striped with purplish red.

ALBATROSS.—Large spike with large, well opened, white flowers.

ANDRE LEROY.—Cherry red, flamed and striped with darker hue; white blotch and white stripe in center of each petal.

BALL OF FIRE.—Scarlet-crimson; maroon blotch with bluish center.

BARONESS BURDETT COUTTS.—Spike long; flowers large; color lilac tinged with rose and flamed with rosy-purple.

CAMELEON.—Spike compact; flowers large, slaty-lilac, flamed orange with a white line along each petal, and a large creamy white blotch streaked with violet.

CORSAIRE.—Spike compact; flowers large, dark velvety scarlet, tinted with brown at the edges.

DUCHESS OF EDINBURGH.—Spike tall; flowers of fine form and substance, purplish-rose with a carmine stripe on the lower divisions.

FLAMINGO.—Spike large; flowers of fine form, fiery red with deep purple blotch.

FLEUR DE LYS.—Spike compact; flowers large, white, slightly blotched with violet near base of the throat.

HESPERIDE.—Ground color white, and profusely blotched and streaked with bright rosy salmon.

LADY CARRINGTON.—Pale lilac streaked with carmine, pure white center.

LA FIANCEE.—White with small blush-violet blotch.

MADAME AUBER.—Spike compact; flowers large, well formed, pale rosy lilac with creamy white blotch and often dappled with light rose.

MARIE BERGER,—Spike dense; flowers well open, rosy lilac, blotched and striped with red shading into yellowish rose at the center.

M'LLE. MARIE MIES.—Dense spike; delicate rose flamed with carmine and blotch of rosy purple.

MONT BLANC.—Large pyramidal spike; flowers large, creamy white changing to pure white with small violet blotch.

MR. BAINS.—A clear light red self color.

NEIGE ET FUE.—dwarf habit, dense spike of medium sized flowers; color bright cherry red, flushed with violet, veined with white and have a large white blotch on lower petals.

NEREIDE.—Spike long and compact; flowers pale rose suffused with lilac and blotched with bright violet.

ONDINE.—White tinted lilac, small dark violet blotch slightly flamed with lilac carmine.

PYRAMIDE.—Spike large, tapering; flowers large, well open, orange rose.

THERESE DE VILMORIN.—Tall spike; flowers creamy white changing to pure white with a few purplish rose stripes in center.

VICTOR JACQUEMINOT.—Compact spike; flowers orange and scarlet, ground violet, blotch of violet and streaked and speckled pure white. W. F.

OBITUARY.

VICTOR LEMOINE, the well known florist of Nancy, France, the originator of so many new plants of value, has passed away.

A portrait of M. Lemoine appeared on page 69, of our last volume, the issue of September 15, 1890, (No. 123) together with a sketch of his life-work in the field of floriculture.

SEE advertisement in this issue giving points about our new directory and reference book.

Rhapis Humilis.

Rhapis humilis (Chamærops Sirotsik and other syn.) is similar to R. flabelliformis, but smaller in all its parts. It is excellently adapted to house culture, thriving best in a cool greenhouse. Treated liberally with good soil and plenty of water in summer out of doors it does grandly. Propagated of course like flabelliformis by division. It is considered one of the best plants for small decorations.

The magnificent specimen from which our illustration was engraved is at the Botanic Garden in Washington.

New York.

The cut flower trade is very uneven just now. Some days the demand is very brisk and everything goes, then just as everybody begins to feel secure and to make preparations for a steady run it all goes to pieces again and there is an overstock all round. Violets even, which have about as regular a sale as anything at this season of the year, have jumped from $1.50 to 75c per hundred within 24 hours, and then back again to $1.50 within another 24. Still there are none too many first class roses coming in, and in the event of a cold snap between now and the holidays there may be some lively gymnastics in rose prices and buyers won't be so particular about quality as they have been. Nobody seems inclined to quote holiday prices on roses, but the general impression seems to be that they will be considerably higher on the average than they were last year. Bulbous stuff will be plenty. Roman hyacinths are already in more than necessary quantity and prices are low. Harrisii lilies are also somewhat over abundant. There are some very good Magna Chartas coming in. Theo. Roehrs is receiving a nice lot of them regularly from Julius Roehrs, and Littlejohn is also sending some good ones to Young Bros. American Beauties are in great demand if of extra quality, and the price on selected specimens seems to take a jump every day. The somewhat ridiculous classification according to length of stem advocated by some of the growers, still causes considerable controversy. One wholesale dealer suggests facetiously, but with equal good reason, that they should each procure a pair of scales and classify Beauties according to weight!

The first consignments of imported mistletoe are in, and the stock is in fine condition. Needle pines and palm crowns turn out exceedingly good this year and a brisk demand from the city florists has set in. There is also an extra early demand for holly. Part of the holly in market is very poor, but not all. There are some fine lots, well berried, and careful buyers who order early can be suited. Wild smilax is selling well. New crop cape flowers are expected to arrive next week. Latest advices from the Cape state that large fires in the Boerland, where these flowers are grown, have destroyed much of the growing plants and New York jobbers are looking ahead to steep figures in consequence.

The last auction sale of the season took place at Wm. Elliot & Sons' on Friday, December 11. The stock was from the Boskoop Nursery Association and consisted of H. P. roses, rhododendrons, lilacs, deutzias and other plants for forcing and decoration.

On Thursday, December 10, at Robt. B. Young's occurred another great sale of imported orchids from Sander & Co. This sale was said by Mr. Dimmock to be the best one of the season. Among the buyers of orchids were the well known rose growers, Asmus on the hill, Asmus in the hollow and J. H. Taylor.

The New York Florist Club at its meeting on Monday, December 14, elected the following officers for 1892: President, James Dean; Vice-President, Theo. Roehrs; Secretary, John Young; Treasurer, C. B. Weathered; Trustees, J. B. Keller, Julius Roehrs, R. B. Young, H. A. Siebrecht, Wm. Plumb, S. C. Nash.

The question of a spring exhibition was considered and was regarded with favor.

The committee on the recent chrysanthemum show at Madison Square Garden gave a report of their recent interviews with the Garden Co. The figures are not all straightened out yet, but the club will be at least $500 richer as a result of the show. Considerable dissatisfaction is abroad, however, regarding the Garden Co.'s methods, and should another joint exhibition be arranged for the club will insist on having an ironclad agreement in advance. Previous to the regular club meeting the bowling club held its session and the new balls and pins were given another severe test.

A lovely form of Lælia autumnalis alba is now in flower with Mr. Hicks Arnold. The spike carries seven well formed flowers of pure white with a faint yellow mark in the throat. This is still a very rare variety and is always admired.

Mr. David Rose, for the past eight years head gardener to Mr. Charles Pratt, Brooklyn, has resigned his charge there to accept of the position of foreman to E. G. Hill & Co., at Richmond, Ind. But so good a gardener and open, honest and likeable a man could not remove so far away from his friends in the east without first receiving the stamp of their appreciation. So on Thursday evening, Dec. 10, Mr. and Mrs. Rose were the guests of President and Mrs. Dean at Bay Ridge, where and when also a large number of Mr. Rose's friends met to give him a happy surprise. At a fitting time Mr. Dean in his own frank and felicitous style, and in the name of the florists present and those unable to come, presented a handsome gold watch and chain to Mr. Rose and an enamel diamond pin to Mrs. Rose as a mark of the high regard in which they are held by their friends. The surprise was complete and the recipients touched. And all enjoyed the generous hospitality of their warm hearted host and hostess and their delightful family. It was a happy gathering.

After the presentation ceremonies and the necessary attention to the requirements of the inner man, the company was entertained by Miss Maud Dean and Mr. Alfred Dimmock with songs, after which dancing began, Mr. C. B. Weathered leading off with Miss Plumb. One of the Misses Dean danced the Highland Fling and Sailor's Hornpipe amid great applause. Later the boys adjourned to the pool room, where some very remarkable shots were made, Mr. Gus Bennett even playing with the balls on the floor. The party dispersed at a late hour with cheers for Mr. and Mrs. Rose and many thanks to the genial host, hostess and their daughters.

Mr. E. H. Rath of Flushing, L. I., who is supposed to have perished in the railroad accident at East Thompson on Dec. 4, was a member of the Society of American Florists.

Mr. I. Forstermann has a sport from carnation American Flag which closely resembles Hinsdale, and one similar to Grace Wilder in color. Mr. Forstermann is using a mixture of bran and paris green for slugs with very gratifying success.

Mr. Alfred Dimmock will sail for England on Dec. 19.

Sage advice to rose growers: Don't store your roses away in the cellar a week or two ahead of Christmas. It is a big temptation, but it doesn't pay.

Boston.

The first half of December has got into a bad habit of recent years and has earned the reputation of being a dull season. "Saving up their money for the holidays," is the explanation given by some. This year is no exception to the rule as far as general trade in cut flowers goes, but there have been several funerals of prominent individuals which have served at least one good purpose. The weather has been unusually mild and the crop of roses, carnations, etc. has been pushed rapidly along, so that no advance in prices is yet noticeable, although it will be but a few days before the growers begin to hold back anything that can possibly be stored till Christmas, and then the pinch will begin. Under the circumstances the advent of cold and stormy weather before the holidays would be apt to make some kinds of stock very scarce. A few chrysanthemums still linger, and one large grower has by intention or by accident a large quantity which will be all right to hold for Christmas, and which ought to bring him in good returns. The best roses in the market at present are Ulrich Brunners. Where these are shown in good shape the American Beauty has to step down a peg.

The much discussed Waban is seen in considerable quantity and improved quality, although the retail florists as a rule do not take kindly to it, their feelings towards it being well illustrated by the witty and only Lawrence Cotter, who says, "When I open my box and show it to them they're like to eat the face off of me."

Holly is coming in, well berried and handsome, although it is said that in some of the holly districts the berries are conspicuous by their absence this year. This may account for the unusual demand which has begun earlier than usual and bids fair to clean up all available stock ahead of the time.

The closing meeting for the year 1891 of the Massachusetts Horticultural Society was held in the Library room, Horticultural Hall, on Saturday, December 12, the principal business being the reading of reports by the chairmen of the various committees. This was the first year of the existence of the flower committee separate from the plant committee. Mr. A. H. Fewkes' report of the year's work by this committee was listened to with much interest and was conclusive proof as to the wisdom of the new departure. Among Mr. Fewkes' recommendations for the future special stress was laid upon the importance of correct and legible labelling of all cut flowers except those grouped for display only, and the desirability of the adoption by the society of some uniform label for this purpose, the same to be provided for the use of all exhibitors.

The report of the transactions of the society for the first half of the year 1891 has come to hand, and is most creditable to Secretary Manning in its appearance and its scrupulous correctness. All the essays and discussions of last winter are printed in full, and two of the papers, that of Col. H. W. Wilson on a Winter Visit to the Bahama Islands, and that of

RHAPIS HUMILIS.

Thos. W. Galloway on Fungus Causing Damping Off, being beautifully illustrated, the former with eleven plates and the latter with two.

On the exhibition tables on December 12 were some unusually fine spikes of Calanthe Veitchii vars. superba and compacta, and good heads of Luculia gratissima, a beautiful cool greenhouse climbing shrub, exhibited by Geo. McWilliam, of Whitinsville.

Hew's pottery, which was damaged by fire on December 1, is one of the landmarks and best known manufactories in Cambridge. The business was started at Weston by Mr. A. H. Hew's great grandfather, Abram Hews, in 1765, and has been operated by the family ever since. It was moved to Cambridge in 1871. From the original structure, destroyed December 1, the plant increased little by little till it snugly covered an acre of ground. Over 100 hands are employed in the establishment when in full running order. The firemen were promptly upon the scene and did exceedingly well to keep the fire from spreading into the adjoining storehouses, the shipping department and paint shops. It was also kept out of the office, so that all the firm's books and accounts are perfectly intact. Mr. Hews says that he will be seriously handicapped in preparing for the spring trade. He will rebuild at once, and until he gets the factory in running order he will utilize a building recently erected by him on Walden street for refining clay for manufacturing purposes. As he is obliged to build his own machinery there will be at the best considerable delay in doing that.

Information comes from Washington that Henry Wax, son of N. S. Wax, the Winter street florist, has been cutting up strange pranks about Washington and has been arrested and held in custody pending an investigation as to his sanity. He has given evidence of unsound mind on previous occasions in Boston.

Chas. Newton, son of J. C. Newton, a Malden florist, is prominent in the daily papers at present as the victim of a shooting affair. Accounts are somewhat conflicting and the exact truth of the matter

has not yet been determined, but the young man has a very ugly bullet wound in the arm, which he claims was inflicted by a stranger who attacked him at the greenhouses.

Mr. Frank Barney, the popular foreman at the seed establishment of Schlegel & Fottler, is mourning the loss of his father, who died on December 11.

Philadelphia.

Mr. John Thorpe has been with us during the past week in the interests of his department of the World's Fair.

He has been busy in visiting the leading owners of rare plants in an effort to secure donations or the loan of such as their possessors will part with and which cannot be purchased. He has met with great success and will receive from Mr. George W. Childs some very large specimens of palms, plants whose growth are making them too bulky for a private conservatory, and will also receive some rare specimens from Mrs. Baldwin.

He has secured in addition some of the large specimens from the Park Conservatory, which were placed there during the Centennial exhibition. From the trade quite a number have promised support and will make very interesting exhibits.

There has been quite a demand for good roses, particularly Beauties, the past two weeks. Mr. Burton's have been very fine. His first house of Laings and Brunners is in; the flowers are a fine color and of good size.

Mr. Price of Lansdowne has a house of Brunners which is looking well and will be in full crop about Christmas.

Prices have stiffened considerably. Mermets, Brides, La France, Albanys and Bennetts are bringing 6 cents; Cusins, Hostes, 5; Perles, Gontiers, Sunsets, Niphetos, 4 to 5; Beauties, 35; Laings, 40; Brunners 60. These prices are for the best average run of roses; in poorer grades the price depends on the abilities of the parties interested.

The carnation crops seem off or else the demand is greater, as the supply is hardly equal to it; they now bring $1.50 to $2.

Chrysanthemums are all cut out except with Mr. Harris, who has still some late varieties. His Mrs. Herbert Pennock is a very large yellow; the first flowers were cut Dec. 8; it will easily last until Christmas.

St. Louis.

The Florists' Club of this city held a business meeting Dec. 10, at which Mr. E. H. Michel presided, with Mr. E. Schray as secretary.

The finance committee reported the door receipts of the chrysanthemum show to be over $1,300 and the expenditures about $800, leaving a balance in the club's treasury of over $500. This surely is encouraging since this chrysanthemum show was the first ever held here. The exhibition committee reported that next year's show will be held about the 9th of November.

There were five applications for membership to the club, which now numbers over fifty members. Some time was spent in discussing the contents of a letter from Prof. Wm. Trelease, director of the Missouri Botanical Garden, in which he suggested that the Florists' Club select a young man about 15 or 16 years old to take up a scholarship at the above Garden. It was decided, if possible, to give the scholarship to a St. Louis boy in preference to one outside of the city. At the next monthly meeting a number of interesting discourses on roses will be given.

Chrysanthemums are about over. The weather is and has been for the last few days unusually warm. People are saving up their pennies for the Christmas festivities. These three facts must account for the general dullness in both wholesale and retail cut flower trade. Roses, however, seem to be in fair demand locally. This warm spell has increased the sale of small shrubs, for since the frost is now out of the ground both buyers and sellers are not slow to take advantage of the fact.

The recent fire at J. M. Hudson's place, caused by defective heating apparatus, is a warning to all who contemplate building boiler houses. Let us fireproof.

Mr. F. J. Fillmore has in successful operation the putting of double strips of common chicken wire between his rows of carnations, an idea brought forward in these columns some time since. The material used costs one cent only a plant. A good flower saved from each plant will bear this expense, besides which plants held up in this way from the time they are first planted in the benches do not need the amount of cleaning usually given; then again no flowers need be lost, for all can readily be seen.

At the Missouri Botanical Garden the work of improvement by substituting good substantial walks for the old ones is making rapid strides. The Pampas Grass has all been taken up and planted in cold frames. The lawns are all being liberally dressed with a mixture of equal parts of very old cow manure and the cleanings from a ditch in which sewage has been running for many years. The tulips and other Dutch bulbs are now all planted and the beds covered with pine needles for protection during the sudden changes which we experience here. All roses, other than those that are hardy, have been treated to a good mulching of pine needles, which are par excellence as a protector against the winter's severity, when they are obtainable. As your correspondent passes through the greenhouses the beautifully perfumed flowers of several species of anthuriums greet his eyes, the odor of which mingled with that of the more widely known Olea fragrans fills the air with its sweetness. J. W. D.

Montreal.

The regular meeting of the club took place on Tuesday evening. There was a very large attendance. It was decided to hold a spring show about the middle of April, when the prizes will be awarded on the St. Louis plan. One proviso is that no exhibit will be allowed to win more than 30 per cent of the sum for that section. This is done so that there will not be any kicking in case of only one or two exhibits in said section. This experiment on our part is looked upon as very important, for if successful the days of 1st, 2nd and 3rd prizes will be over. Any how it must often be very annoying to an exhibitor to lose 1st by perhaps only a point or two and to get only about the half of the value as the 2nd generally is.

The president announced that the distribution of Christmas boxes (prizes) would take place on Tuesday evening, the 22nd. All interested please take notice as the local papers have it the 29th. J. Betrix read a short paper on azaleas, after which Mr. G. Hughes (of Hughes & Stevenson, steam fitters, etc.) read a paper on heating, in which he said that 4-inch pipe was still the best way of heating greenhouses. He also said that the fireman was a very important factor in the case and we agree with him on that point.

Business is fairly good. The weather has been extra fine, in fact the best on record. We hope for a good trade Christmas and New Years.

There will be quite a few "mums" this year and not "rags" either. Widener would easily keep if cut back late and so would most of the other varieties. I cut back a lot the last week in August and am cutting good flowers now and will do so till the new year, of Widener, Lincoln, Mrs. I. Clarke, Kioto, Domination, Cullingfordii and several others.

The competition between our hard-working secretary and corresponding secretary as "propagators" is very interesting and looks as if it will be a tight race, though if "Walt" keeps up the pace he will soon overtake Joe who started with a lead of one length.

The gardeners voted in a full board (9) of directors at the meeting of the Horticultural Society on Monday, the 7th inst, much to the surprise of some of the old board who had had matters all their own way for some years. As the funds are at a very low ebb the new board have got plenty of work on their hands to pull the society out of the hole it is in. J. B.

Toronto.

The Gardeners' and Florists' Club proposes to have its second annual dinner on Tuesday, the 15th inst. This is rather earlier than was at first intended, but it was found that if not held before Christmas it would owing to various circumstances, have to be put off till late in January. We should have liked to have had some of our American brethren with us, and possibly may, but the notice is very short. The club in order to accommodate the poorest member has put the tickets to members at 50 cents and will kindly pay the balance itself. The whole crowd and a "big time" is expected.

Signs that Christmas is getting very near are already to be seen in the florists' stores. A good trade is expected if the weather is favorable. The year before last stove and greenhouse plants were being sold on the market the day before Christmas and they did sell too. This climate is often painted blacker than it need be.

Chrysanthemums are still pretty plentiful, but many of them begin to have a sort of "passe" look about them.

Already the question "are you going to Washington next August?" is being asked, and from the answers given a good sized delegation from Toronto may be expected. Mr. J. H. Dunlop goes to spy out the land there in two or three weeks and his report of the customs, manners, food, beverages, etc., of the natives in that district will be anxiously awaited. Mr. Dunlop has been asked particularly to report on the quality of tea, coffee and porridge. E.

OUR REPORT of the Indianapolis chrysanthemum show failed to mention a seedling named Dr. H. D. Hull, shown by Messrs. Nathan Smith & Son, Adrian, Mich., and to whom was awarded a certificate of merit for same. It is a dainty pink in color, petals long and broad, of the Japanese incurved type. In the same report "Redondo" was misspelled, as was also "Goguac," here correctly given.

IN THE report of the exhibition at Wooster, O. the names of the seedling carnations shown by Edward Swayne were transposed by our correspondent. Aurora is the pink one and Thos. Cartledge is the red, or rather is nearly the color of La Purite.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By a practical florist, gardener and rose grower; private or commercial; references. W. LODGE, 37 Broker Ave., Cleveland, O.

SITUATION WANTED—By a young man age 20; have been in cut flower store for 7 years as floral artist and decorator. Address C P, care Hill Bros., Richmond, Va

SITUATION WANTED—By a competent florist and gardener; private or commercial place; age 29, single; can give good references State wages Address P. WITTRUP, Ft. Scott, Kan.

SITUATION WANTED—By gardener and florist; first-class, practical man of long experience; also fruits and vegetables. Address D M. care J. F. McDonough, S. Orange Ave., Newark, N. J.

SITUATION WANTED—By an active young man of sober habits; 5 years' experience in growing cut flowers and bedding plants. Good reference. Address A F, care American Florist, Chicago.

SITUATION WANTED—By young Swedish florist Jan. 15; 10 years' experience, 4 in U. S.; competent to take full charge of greenhouses. Best of references. Address PEARSON, 112 Boot St., Marion, Ind.

SITUATION WANTED—As foreman. Thorough, practical, experience; capable and reliable in any department; growing roses, florist stock of the finest quality. Good salary Address T C, 1514 Chestnut St., Philadelphia, Pa.

SITUATION WANTED—By a young man, age 24; large experience in greenhouse plants. Speaks French, Flemish and little English. Good references. Address ART DEMEYER, Porte Anvers, Ghent, Belgium.

SITUATION WANTED—By a young florist; have had considerable experience in growing roses, violets, carnations, and bedding plants. Good reference. Please state wages. Ready March 20. WALTER M. COOPER, West Grove, Chester Co., Pa.

SITUATION WANTED—By a thorough, practical florist and landscaper, having 20 years' experience in first-class public and private places. Best references Married; age 32 Address AMERICAN, care H. A. Dreer, 714 Chestnut St., Philadelphia Pa.

SITUATION WANTED—As foreman or manager, to take charge; thoroughly versed in growing roses, plants, bulbs carnations, violets; many years' experience in leading places in England and America. First-class references; good wages wanted. Address D P N, care American Florist, Chicago.

SITUATION WANTED—By an Englishman, age 40, single, as gardener and farmer; thoroughly understands the management of stock; also high and low pressure boilers; has filled similar situation for 19 years; best of references from a large place. Address AUGUSTA, care American Florist.

WANTED—Catalogues of florist and nursery stock. Address NICK GREIVELDING, Sparta, Wis.

WANTED—To lease or rent, an established florist business with 10 000 or 15,000 feet of glass. Address K. WOLFF, Carthage, Ohio.

WANTED—At once, 25 or 50 Azaleas, double, all colors; must be sure to bloom this winter, and cheap. JOHN IZE, Pleasant Plains, Ill.

WANTED—A good, sober gardener; one that is good to propagate as well as work in a greenhouse. H. MOORE, 54 Beale St., Memphis, Tenn.

WANTED—Partner in contract for nurseries and botanic garden, "Perry Grant," Honduras. Grand chance for energetic man. M BENSON, Sparta, Ill.

WANTED—A young man with some experience in greenhouse plants. Must come well recommended. State wages expected Address F. W. WRAMPELMEIER, Louisville, Ky.

WANTED—A thoroughly competent mushroom grower for commercial house—one who understands floriculture preferred. A. J. VREELAND, 200 Westside Ave., Jersey City Heights, N. J.

WANTED—By middle of January, 1892, florist for commercial greenhouse of 3,000 ft. under glass. Further particulars by correspondence or personal interview. E. M. H. EDWARDS, Dunkirk, N. Y.

WANTED—A young man of good habits and pleasing address as cut flower worker in a first-class retail store in a large western city. Must come well recommended. Address, stating age, nationality, references and salary desired, to R G, care American Florist, Chicago.

WANTED—Florist for a suburban home near Kansas City, Mo., to take charge of private greenhouse and garden; must be well informed, industrious and well recommended. To right party permanent employment and comfortable home with reasonable compensation. Address L. O. SWOPE, Independence, Mo.

TO GARDENERS AND FLORISTS.

HOLIDAY PRICES.

As we stated in a short item in last issue now is the time to consider the question of holiday prices, and to assist in its consideration we reprint herewith extracts from our reports on the holiday trade of last year.

Here they are:

New York.

This has been the poorest Christmas New York has seen for many years. The general uncertainty of the financial outlook made flower buyers cautious. Society people were very quiet, not one half the usual floral compliments were exchanged. An analysis of the trade shows that the middle classes were the principal flower buyers.

Flowers were never so cheap at Christmas before, prices in many instances only reaching half those of last year.

It is more than probable that a much larger business would have been done by a little if the public knew flowers could have been bought at reasonable prices, but unfortunately the florist is looked upon as a robber at Christmas and New Years, and people pass the flower windows with a sigh and visit the neighboring candy or jewelry store. It is only natural for growers and retailers to try and get as much as they possibly can for stuff, but the question to be settled is, do high prices at Christmas tend to benefit our trade?

There were many reputable retailers here who bought very little at Christmas. Why? It was the same answer from all. Their customers would not pay the high prices.

Boston.

The volume of Christmas trade was fully up to the average. The weather for several days preceding the holiday was more like April than December, consequently was most favorable for shoppers, so that the retail stores and street dealers had all they could attend to.

Such weather was a boon for the buyers, and in an equal degree a cross and a perplexity for the growers, who were put almost to their wits end to dispose of their unexpectedly bountiful crop at figures consistent with well established and generally accepted traditions. And they went about it in the usual short sighted way. For two weeks preceding Christmas they stored and stored, and anxious buyers were politely refused in the old fashioned style. And when Christmas was come they appeared in droves with their accumulated stock. And at the wind-up they were just as persistently anxious to unload as they had previously been to accumulate. On Christmas morning it was indeed a lucky bud that escaped the cutting shears; if it only showed a speck of color that was enough for its thoughtless owner in his desperate determination to sell everything "for Christmas." So when on the day following, winter set in in dead earnest and the greenhouses were dark from the heaping snow drifts, roses and carnations were called for; there were none to be had.

The same old story year after year, and like other respectable stories it has its moral, yet how few there are who learn it or heed it.

It is said that several dealers who had bought recklessly were badly overstocked with certain varieties of flowers, which they were glad to unload finally at almost any price.

Chicago.

Christmas trade averaged somewhat less than last year. There was a large supply of flowers and prices were 25 per cent lower than at last Christmas. There was a big overstock of violets, white carnations, Roman hyacinths and smilax. Fancy colored carnations sold out clean. A big supply of all roses except American Beauties; an overstock of Perles and Niphetos, and they were sold at less than quotations. All red roses were sold. No demand for poinsettias. Quality of most stock was as good as usual. The over stock of smilax was very large. Less demand than ever before for it. Holly and green sold well at prices equal to those of last year.

One large florist claims that there was more kicking about high prices at Christmas than ever before, in spite of the fact that prices were really lower than they have been at the holidays for a long time. Customers assumed that the prices were high simply because Christmas prices were traditionally exorbitant.

Many amusing stories are told about various growers who "pickled" stock, refusing high prices just prior to Christmas, and then almost giving it away afterward. As one florist puts it, "There were enough violets in the market Christmas day to pave State street and then leave enough for New Years."

Philadelphia.

Christmas has come and gone and as far as we can hear the trade generally are satisfied. Growers report a good cut and most of the stores a better business. Prices jumped from $10 for Mermets, La France and Brides on the 18th, to $25 for the same kinds on the 23d, and stock was not a 1 first class even at that. Everything goes at Christmas, but it is rather galling to the dealer to see would-be customers go out of the door on the announcement of prices.

There was plenty of stuff of all kinds and no word of "We can't take any more orders as we haven't got flowers enough to get out what orders we have," as used to be the case in former years. Philadelphia now has plenty of flowers for her own market and an abundance for shipping.

The points to now consider are these: 1st, will the supply at the coming holiday season be less, equal to or larger than last year; 2nd, will the demand be larger, equal to or less than last year. If decided that both supply and demand will be larger than last year then follows the query, will the increase in the demand exceed the increase in the supply. If it is decided that the increase in the demand will in all probability greatly exceed the increase in the supply then we will be warranted in setting prices a peg higher than last year. If, however, we decide that the increase in the supply will be only equal to the increase in the demand then we ought to set the prices a peg lower for we know that all was not sold last year. If we are convinced that the increase in the supply is considerably greater than that in the demand we should make prices quite a fair percentage lower than last year in order to move the entire supply. We must endeavor to estimate as closely as possible the prices that will sell all, or very nearly all, the supply, and if there remains more than 5 per cent of the supply unsold, we will have made a serious blunder in our estimates. Again if we sell out clean and find a large demand still unsatisfied we will have made our prices too low to realize the fullest possible returns. But taking the effect of holiday prices on the average regular buyer into consideration it will undoubtedly be better in the long run to err in making the prices a trifle lower than necessary to move all the stock rather than to make the blunder of setting them too high with the result of a surplus to go to waste.

And in view of the uniform experience of the last few holiday seasons it will be to the best interests of the growers to do very little holding back of stock just before the holidays and then unloading great quantities on the market. The conditions that made this plan profitable some years ago do not now exist. Demand is not now so concentrated at certain seasons as it was then, and while it is certainly still very profitable to strike the holidays with full crops, the thing can be overdone. We can now place in the market an immense crop of fresh flowers at the holidays, owing to better methods of manipulating matters than prevailed in years gone by, and "pickled stock" now stands but little show in the open market even at the holidays. And experience has also shown us that of late years the natural, regular demand would take all these flowers at prices equal to holiday figures had they been marketed when really ready, so that "pickling" has become not only an unpleasant but a decidedly unprofitable transaction.

THE forthcoming corrected edition of our directory will be much more than a mere list of those in the trade. It will be in reality a reference book as well as a directory. Among the special features will be alphabetical lists of roses, chrysanthemums and carnations, up to date, giving class, name of introducer, date of introduction and brief color descriptions, and give synonyms. These lists are being compiled by experts in each particular class, and can be relied upon as authoritative. The spelling of the names will be verified in each case and the list will we believe be of much value as an authority upon the spelling of names alone. In addition to these lists we shall print in the Directory the government statistics of the Florist, Nursery and Seed trades; a list of all the national trade organizations, with a brief outline of the history and objects of each, together with the names and addresses of officers; a list of all the Florists' Clubs and other local trade organizations, with a few facts of interest about each one; and much other information of interest to the trade that it will be convenient to have at hand for frequent reference. It will be a book that every florist, nurseryman and seedsman will want on his desk. The price will be $2. Order a copy now.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

REMOVAL.

BURNS & RAYNOR,

Wholesale Florists,

HAVE REMOVED TO

49 West 28th Street, NEW YORK,

where they will have larger store space and better facilities for their rapidly increasing business. Their method of **Shipping Roses** has given them a large out of town trade and for good flowers, especially **Beauties** and **large Mums** the above address is **Recognized Headquarters.**

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

The U. S. Seed Store Again.

The Washington *Star* of Oct. 24 says:

The department of agriculture is about to begin its purchases of seeds for supplying the farmers of the country. All such buying is done directly from growers. Congress appropriates $100,000 for this purpose annually. It costs $60,000 to put up the product and ship it from Washington, so that only $40,000 is actually devoted to paying for the material distributed. In June and July special agents travel about inspecting the crops which the seedsmen are raising. They select what they want by sample and in November they journey around again and make their contracts.

The seedsmen do not usually produce their stock in trade on their own land. They hire the use of extensive tracts from farmers—sometimes such a plantation will include a thousand acres—paying so much an acre and supplying the seeds to be planted. On their part the farmers contract to deliver the crops obtained husked or threshed, cleaned and in good condition. It is agreed that they shall do all the labor and that the parties of the other part shall be permitted to examine the fields at any time and weed out all "rogues," which are plants of inferior varieties such as will creep in.

UNCLE JERRY'S SPECIAL AGENTS.

In summer time, when the crops are growing Uncle Jerry's special agents come along. To them each seedsman shows not his green fields, but his "trial garden," wherein he cultivates a few specimens of each choice vegetable that he is engaged in propagating. The government buyers look the stock over, decide in a general way as to what they want to purchase and go away, to return in the late autumn and give their orders after inspecting the seeds in the bins.

These seed farms are scattered all over the United States. Cabbage seeds are nearly all grown on Long Island, elsewhere in New York state and in Connecticut. Farmers believe that they need salt air. Of cauliflower seeds the same remarks may be repeated. Peas for seed all come from the neighborhood of Traverse, Mich., and Manitowoc, Wis. Those got from elsewhere are always apt to have little worms in them, but the flies of which these worms are the larvæ do not live in the region mentioned. Beet seeds are nearly all imported. Carrot seeds come from the far west, especially from California, in which state are also produced most of the lettuce seeds and the best. Corn and onions for seed are raised all over the country and the same is true of the seeds of melons. Cucumber seeds come from Nebraska, Wisconsin and Missouri.

Onion seeds are gathered by going through the fields and cutting off the pods at the tops of the stalk, tying them in bundles and threshing them out on canvas. Beans are allowed to stand in the field until they are yellow, after which they are stacked up until they are perfectly dry and threshed out. Peas are permitted to get dry and hard in the rows and then are taken to the barn for threshing. To get cabbage seeds the stalks which have grown one year must be planted the next, when they run to seed. The same is true of carrots; the roots which have developed in one season are put in the ground the next and go to seed. No seed potatoes will be distributed this year by the department. The eyes which have been shipped in past years were found too perishable, either rotting or freezing before they were planted and whole potatoes are too bulky to handle.

IF YOU have anything to sell to florists, nurserymen or seedsmen you ought to have an advertisement in our forthcoming Directory and Reference Book. An advertisement in this book will be constantly under the eyes of possible buyers for the next two years.

A ST. LOUIS gardener predicts that rose bugs will be in force next year and that they will not leave a leaf on rose bushes. He says that the earth at the roots of rose bushes is full of eggs and larvæ of this destructive insect.

THE BUSINESS of J. Horace McFarland, Harrisburg, Pa., the "printer for florists," has been incorporated under the title of J. Horace McFarland Co.

ROOTED CUTTINGS.

Carnations. Some 30,000 feet of glass are devoted to Carnations alone, with two propagating houses each 100x10; these will be kept filled with cuttings of the three best Novelties of last season—**LIZZIE McGOWAN, HECTOR and GOLDEN GATE;** also the best of the older sorts and other novelties of merit. They will be ready for delivery DECEMBER 20th and later as desired. CUTTINGS will not be sent out until well rooted and every effort made to give satisfaction in all particulars.

READY NOW, a fine lot of **GERANIUM CUTTINGS,** all of the very best varieties Old and New, making them cheap at the price, $2.00 per 100; $15.00 per 1000. Other miscellaneous stock later on. It will pay you to watch my adv. for changes.

WHY You Should Grow Mushrooms.
Because they are the most profitable crop for the outlay that can be grown and may be grown without interfering with other crops. The market is sure, the supply never having been equal to demand.

WHEN You Should Grow Mushrooms.
During the Winter and Spring months, the first planting in August or September with successional planting until April.

WHERE You Should Grow Mushrooms.
Under the greenhouse benches, on the greenhouse benches among growing crops, in Rose Houses, in frames in the greenhouse, in cellars, stables or outhouses, in the open field or in mushroom houses.

How You Should Grow Mushrooms.

First get spawn that will grow. It must be fresh, well spawned, and in good condition. **Gardiner's Celebrated English Mushroom Spawn** is the best, and is always fresh and reliable. The details of culture are given concisely in our treatise, **"Mushrooms for the Million,"** Mailed free. **Falconer's "Mushrooms and How to Grow Them."** Published at $1.50. (Gardiner's price $1 35 post free.) **Robinson's "Mushroom Culture,"** 50 cts. postpaid.

GARDINER'S ENGLISH MUSHROOM SPAWN.

John Gardiner & Co., have made a specialty of choice spawn for years, and their celebrated English brand (made by the best maker in England, specially for their trade), has gained an enviable reputation among critical growers for its uniform good quality, and can be thoroughly relied on to produce a good crop of the best mushrooms. Orders booked now for delivery as wanted, $8.00 per 100 lbs. Special rates to large growers. Address all correspondence to **21 North Thirteenth Street,** Philadelphia, Pa.

PANCRATIUM CARIBBAEUM.
(The Great Spider Lily.)

This was one of the best selling novelties last season, and not only sold, but gave **SATISFACTION** to the purchasers. Thousands of bulbs have bloomed freely in all parts of the country. Every **LIVE FLORIST** will catalogue it this season, and to meet the popular demand we have secured 250,000 bulbs of blooming size.

We offer these at $3.00 per 100; $22.50 per 1000, packed and delivered f. o. b.

We also have a few bulbs of the **CRINUM NOBILE** that great average over 2 lbs. weight, at $35 per 100, and some fine **CRINUM AMERICANUM** at $7 per 100. These bulbs are all first quality and size. Order now, and be in time to insure your supply.

Keeping Carnation Flowers.

Will some of the readers of the FLORIST please inform me whether carnations will keep better on the plants or in water when open for a day or two, as I can not go to market every day? L. T.

[A well known carnation grower to whom the above was submitted for answer writes: "I have no doubt that the flowers will keep longer if cut off the plants, provided they are cut at the right time and given proper care afterward, such as changing the water and cutting a short piece from the stem every day or two. Carnations are frequently cut too soon, so that if your correspondent sends to market as often as twice a week there will not, in my judgment, be any necessity for his cutting the flowers before needed, cutting then only those that are fully 'ripe.' The cutting of carnation flowers at the proper degree of development is a very important matter, and I hope that through the medium of a discussion in the pages of the FLORIST the matter will be brought prominently to the attention of all in the trade."]

Fungus on Carnations.

Mr. P. J. Bauer, Cleveland, O., writes that his carnations are infested with a fungus apparently different from any yet described in the FLORIST. He first noticed it on his plants about a week after they were placed under glass and it spread so fast that it has almost ruined his Silver Sprays and Fred Creightons. He has been picking off all affected foliage, but this does not check the spread of the fungus to any appreciable degree. He desires to know whether any reader of the FLORIST can suggest a remedy other than throwing out the plants.

STOCK PLANTS OF
CHRYSANTHEMUMS.

JESSICA once more to the front. Those that had it, wished they had grown more. Those that had none, wished they had it.

NOW IS THE TIME TO ORDER STOCK PLANTS.

We offer Stock Plants of Jessica, 25c. each; Rohallion, the grand new early yellow, 25c.; Mrs Gerard, the earliest large pink, 25c. The best flowers of this variety wholesaled at 50c. each in the New York market.

These three varieties have now flowered and are ready for shipment. All other commercial varieties on hand and ready as soon as flowers are cut.

Orders filled in rotation. Do not delay ordering if you want these varieties as stock is limited.

Size Versus Quantity.

I would like to reply to the item about "An original discovery or not," on page 260 of the FLORIST of October 29, '91.

I agree with the writer that the overhanging branches or vines bloom more freely than the vertical or horizontal growing vines. I have noticed this often in Marechal Niel and other roses as well as other vines.

But to try the same logic with grape vines would not be wise for the reason that the number of bunches of grapes is not what we want to increase so much as the quality of the fruit. It would be easy to produce a great number of bunches on a vine of certain size, but this would reduce the size of the bunches so much that the individual bunches would be almost worthless. This rule holds good both under glass and outside. Growers of grapes very often cut off a lot of bunches in order to give the remaining ones a better chance to attain size. All growers well know that three bunches of 5 lbs. each are worth much more than 15 bunches of 1 lb. each. A grape vine can not produce more than a certain quantity and the more you increase the number of bunches the smaller each one will be.

Anniston, Ala. F. J. ULBRICHT.

THE MANY new features to be added to the corrected edition of our directory will make it especially valuable as an advertising medium for the trade. Don't fail to have your advertisement in its pages.

A FEW POINTS ABOUT OUR NEW DIRECTORY.

POINT 1.—The new book will contain an accurate list of those in the trade on the Continent of North America, January 1, 1892.

POINT 2.—In addition to the above it will contain the statistics of the Florist, Nursery and Seed Trades from the last census.

POINT 3.—It will also contain a complete list of all National and Local Trade Organizations, with just the information about each that you want to have convenient for reference.

POINT 4.—It will contain an alphabetical list of Roses, up to date, and whose accuracy as to spelling of names, class, date of introduction, etc., you can depend upon.

POINT 5.—It will contain a similar list of Chrysanthemums, also up to date. One that can be relied upon as authoritative.

POINT 6.—It will contain a similar list of Carnations.

PRICE ONLY $2.00.

? Can you afford to be without this book? We don't believe you can.

AMERICAN FLORIST CO.,
54 La Salle Street, CHICAGO.

J. Horace McFarland Company.

INCORPORATED 1891.

How does that look? It means that I have got to say "we" now, because there are more of "us"; but I'm in good company, I believe! Well, then, "we" are bigger than J. H. McF. all by himself, and we've enlarged, increased and extended his facilities for doing the right sort of printing for florists and the other plant and tree people. A fine new electrotyping outfit and a lot of other new machinery will help the Company to keep J. H. McF. hustling after work, and doing it! The florists are responsible for this move, and they want to notice that we're ready to do Catalogues in great shape at the Mount Pleasant Printery, and do them on time. Write to

J. HORACE McFARLAND COMPANY, Harrisburg, Pa.

[*P. S. by J. H. McF.*—The "we" will go better after a bit. Just notice that I'm right "in it" yet, at the same old stand, and the others are helping me to do better for all of us, and you!]

If you wish to illustrate your Printing with Cuts, send 50 cents for my Catalogue of FLORAL ELECTROS—2,250 Engravings.

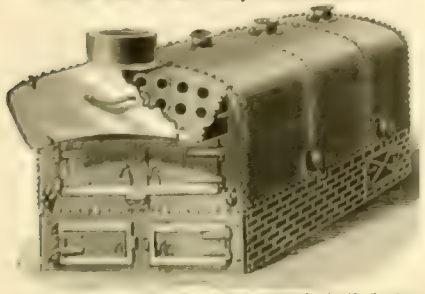
Their work in this journal speaks for itself
Publishers AMERICAN FLORIST.

When you write to any of the advertisers in this paper please say that you saw the advertisement in the AMERICAN FLORIST.

The advocate of the chrysanthemum victorious in a little dispute as to the proper flower for a fashionable boutonniere.

The Chrysanthemum as a Gentleman's Boutonniere.

The chrysanthemum reigns supreme in swelldom for gentlemen's as well as ladies' wear. But in an evil hour at aristocratic Tuxedo, near New York, the other day the fragrant gardenia presumed to snatch the honor from the Autumn Queen. Pell mell on sweet gardenia's nose and with divers other body blows the champion of the queen arose the victor. Poor gardenia's advocate, bruised and bleeding and in a sorry state, has got experience and is now laid up for medical repairs.



They Reminded Him.

The use of "gladioluses" as the plural of gladiolus reminds me of a good old story in which a similar plural of crocus got one party into an uncomfortable position.

Some 25 years ago when the Board of Education was examining the pupils in the primary grades of the schools in New York city, one of the gentlemen in addressing a class of little girls compared them to crocuses as early flowers of spring. Among the guests of the board was an ordinary city alderman, who after the examinations were over, went celebrating on his own hook and late in the day he addressed a circle of girls whom he as city father or any other kind of a father should have avoided while in his condition. In his oration he attempted to make use of the expression he had heard used so effectively in the morning. He said: "You remind me of-hic-you remind me of-hic-of some sort of cusses."

THE NUMBER of changes in the list of florists, nurserymen and seedsmen, as shown by the states already compiled for our new directory, is surprisingly large. Though a great many have dropped out the enormous number of additions will swell the list very considerably over its former dimensions, and show that the trade is still growing very rapidly.

WE WISH a busy, profitable and merry Christmas and a happy New Year to every reader.

DON'T FAIL to have your advertisement in the forthcoming corrected edition of our directory of florists, nurserymen and seedsmen of the United States and Canada—that is if you have anything to sell to florists, nurserymen or seedsmen, and it is something that is needed by them. Write for rates if you do not already know them.

Personal Recollections of Louis Menand.

II.

I shall pass over all my tribulations during the year 1829, the most unlucky and inauspicious of my life. At the close of that year I had the good luck to find a situation where I found a library at my disposal. I fell on one work by Lamarck and Decandolle, "La Flore Francaise," which work *revolutionized* the course of my ideas and opened a new field to my ambition for new studies, a study not exactly connected to horticulture, but which absorbed me at once—the study of "wild plants," if that expression is proper, and especially "Cryptogamous plants." Every one who knew me, when I told them my discovery of that book laughed at me and said in plain language that I was a *down right fool*. I admitted the epithet, but did not change my mind. What a stupid idea will say my acquaintances *of to-day*, to study "cryptogamy" to be a florist, "it is absurd!" Be it so, but paradoxical as it may be, it has been more beneficial to me than growing coleus at 75 cents per 100!! It has in the first place given me *self gratification!* It has systematized my ideas in theory and in practice. It has brought me in contact with people that would otherwise never have looked at me. When later I made up my mind to cultivate exotic plants, such as ericas, banksias and all kinds of New Holland plants, I was saluted with the same reverence; I was a fool! Such business would not pay, etc. etc.

But I perceive that I am overflowing on my subject. I am anticipating upon the future by 50 years. So I return to the first reading of my *French Flora* and the cryptogamic ideas it wove in my brain! Cryptogamic indeed! since they were not understood. In the beginning of 1830 I had to leave my library and its books to settle a short distance further, but always in the precincts of Paris. It was my fourth year of gravitation around that luminous terrestrial planet, that was soon to be more luminous by kindling that "Three days revolution!!" Revolution that I wished and expected since two or three years, at the time I laid down the plan—the foundation—of my religious and political creed, with that aphorism: "No kings! No Medium between Man and Heaven (or between Heaven and Man), every one his own arbitrator, free will! in spiritual affairs."

That year 1830 to April, 1831, closed what I would call the *first phase* of my life. Then I left Paris and went to take possession of a situation as a gardener in the province "Champagne," the classical land of the wine so-called, where I lived over six years, the quietest period of my life. There I could study without being sneered at, but on the contrary I was encouraged to do so. But alas! as before I could not understand the meaning of Latin and Greek names of plants, and at that time we had not such a valuable work as Mr. Nicholson's "Dictionary of Gardening." Somewhat as by intuition I understood or *guessed* that such adjectives as grandiflorus, grandiflora and grandiflorum meant large flowers, but I was perplexed about the termination in *us*, *a* and *um*. How I sighed at my ignorance, and no way, I thought, to learn, for I was as most young men were, and still are to-day. If you have not received a collegiate education when young you can never get it after, especially when you are deprived of means. Notwithstanding that drawback I felt that I could do something. I was determined to try. One day I heard of a certain gentleman—a notary public who was managing the financial affairs of my employer (an old lady)—who was a *good* Latinist. He was not, but he put me in the way of doing something to enlighten me on the subject. So the first time he came to the place I watched for him and introduced myself. With a book in my hand I told him what I had heard of his knowledge, etc. etc. He sharply looked at me and said: "What do you want of me?" I showed him my adjectives in us-a-um, etc., and I told him I thought they meant so and so. He looked at me between my two eyes and gravely told me: "If you know that why do you ask me?" I answered that I thought I knew but was not certain, but what I know not are those terminations, etc. "Those terminations," he said, "are masculine, feminine and neuter, and if you know as much as you evidently seem to, get a Latin grammar and in a few days you will know as much as I do." "To get a Latin grammar I shall have to go 12 miles to get it" (we were in the country). "I know it," he said, "but to-morrow I go thither (to Reims, the next city) and I shall bring you one." I made the remark that a grammar would not give me all the information I wanted. "I must have a dictionary of French and Latin and Latin and French." My employer—who was present—said: "Bring him also those dictionaries, etc." He put his hands on my shoulders and said: "Young man, if you have *guessed* all that you have told me you will go far, and when you have looked over your grammar for a few days come and see me at my office to show me your progress in *guessing* Latin." I went to see him two or three weeks after and I found that if he was not a good Latinist he was a *good man* and he gave me good advice. He kept me two or three hours, talking politics, theology, literature, etc.

I will continue my course for a little while longer on the European continent, then I shall sail for the western hemisphere, my adoptive country, where I have *lived happy*!! for 54 years, less a fort

night when *dark clouds* suddenly *eclipsed* forever *my sunshine*! *half of my life*—my Egeria! my wife - - - - - . You will please excuse the above extemporaneous digression. I could not refrain doing it. It choked me - - - - -

I resume the narration of my studies. I was in possession of the instruments, books, to elucidate the meaning of words stuffed in my head. The first night I got that grammar I did not sleep much. I spent most part of it to decline the first declension: penna, pennæ or rosa, rosæ, etc., and went to bed reciting:

Nominative rosa; Genitive, rosæ; Dative, rosæ; Accusative, rosam: Vocative, o rosa; Ablative, rosa;	Here I decline rosa! as a compliment to our friends the rose growers.

When I say I did not sleep much, to tell the truth I don't think I slept at all, for I think I was still humming "Nominative rosa" when I opened my eyes and saw the light, or rather the dawn of day, as the dawn of my notions, dusky! It was a Sunday morning in June and I intended to go herborizing, so I got up, took up my herborizing box and started across meadows, woods, swamps, etc. I had walked a considerable distance when I found myself on an eminence, wet above the knees by the dew and not feeling too comfortable, when I turned round and I saw the rays of the sun emerging out of the horizon. I was dazzled by the sublime magnificence of that *Light God*!! that *supreme unknown*!! For awhile I forgot my grammar, the cryptogamous and phanerogomous plants. The whole nature, the creation, which I was contemplating with so much admiration that all my moral, intellectual faculties were - - - - - I could not analyze them, was so bewildered it took some time before I could realize where I was, my blood still in ebullition and my legs cold, but it did not last long. That *God-Light* soon warmed me again and when I got over my ecstacy I began to realize I had often seen a rising of the sun, but never in such a circumstance. So I immediately resumed my search for a certain plant, of which I scented the smell before I saw it. I was trampling it under my feet; it was an orchideæ, "Satyrium hircinum," a well baptized plant, from its horrid he-goat's smell. This is another digression—perhaps out of place—but it is an incident of my life and I "sketch it!" And I have many more incidental episodes to relate, but I shall pass them over, or most of them.

I went on with my studies of Latin and cryptogamy and a few other odd ideas, notions, etc. I progressed moderately well. The first use I made of my embryonic knowledge of Latin was quite a diminutive triumph for my vanity. I can not refrain from recounting it.

I had a young man working with me who was going to marry. One day he asked me if he could not have half a day to go and see his betrothed. I told him he could, but I told him jokingly: "My dear fellow, if you marry before the priest you will have to go to confess; if not he will not marry you, but if you give up the religious ceremony and get satisfied to be married before your Maire or any other official, all right! As the French law does not recognize the religious ceremony as legal, you can choose." He answered me that he would not go to confess and would get married! "Well, do as you please," I responded. When he came to work the following day he showed me a sheet of paper folded in four parts, not sealed, nor any envelope at that time. It was a certificate about his morality. No, I forget now, but at the bottom of that document there was a postscript in Latin that he could not understand—the reason I suppose that he showed it to me. That postscript was to inform the priest who would marry him that he (the one who had written it) had not heard the confession of the bearer. It was short: "Domine, Non audivi confessionem. Johan - - - " etc., I can not remember names. After reading it I told him "You have not been to confess." "How do you know?" he replied, looking at me with a change in his countenance, turning pale as if he had committed a crime. "Well, I know it. Do you not know that heretics, free-thinkers and 'bloody Republicans'—as they called me—as they called us—can guess a good many things! Besides this paper tells me that you have not." "What shall I do?" he asked in a tremulous voice. By that time I had returned his paper. "Give it to me again; I will fix it all right." I folded the bottom of the paper containing the P. S., cut it off and handed him both the certificate and the P. S. and told him "Now you can do what you please; give both to the priest or only one and he will marry you if you care for the religious ceremony. If not get the Maire of your village and he will marry you and that is the only legal marriage according to French law. He got married, but I never heard anything about the particulars, the conclusions, nor did I care, I had the fun; that's all I wanted.

From this stage of my condition in that place, until June, 1837, I have not many incidents of my life to relate, besides what I said before, only that new ideas added to old ones, were constantly fomenting in my brain, owing to my solitary life, for I had nobody with whom I could exchange my views, my conceptions, except some occasional correspondence with acquaintances in Paris. The revolution of 1830 had disappointed me; from that event I had expected the proclamation of the Republic, laws more liberal, universal suffrage; instead of that, and thanks to the influence of General Lafayette and other lukewarm Republicans of the same school, we had another King. The political and religious constitution did not suit me and every day I was sighing for the moment I would have money enough to quit France. I tried to get a situation under the government to go to Madagascar, but the man who could get me the position would not do it; he had been there two or three years and had been sick all the time, etc. etc. "I am sorry." "I too," he said, "though you are one of those d—— exalted Republicans who frequently compel us National Guards to take our muskets to quell your stupid notions of Democracy, etc." He was a good man enough but he was gangrened with royalism, more royalist than the King; one of those philosophers of the school of the *stagnants*! His ideas were flowing only when he was at the head of his company of the militia to hunt the Republicans, whom I must say were not all saints, far from it, but brutal force is a poor way of civilizing men. Under Louis Philippe *emeutes mobs* were of daily occurence.

All these things did not help me to cherish my native country, inasmuch as I had already adopted that service: "Ubi Libertas ibi patria"—"Where liberty dwells, there is my country," and that country I contemplated should be the United States of North America. With all such reflections maturing in my mind I determined to move onward, so immediately I made my preparations to leave my situation, and in a few weeks I was in Paris on my way to Havre. Before leaving Paris I stopped with a friend for a few days, during which he took me to the "Sorbonne," one of the oldest universities in the world, to attend a lecture on botany by the LAST of the *Jussieus* (Adrien de Jussieu), a family of savants. While there I met a great many young students, lawyers, physicians and other philosophers in embryo, who, when they understood I was going to America, flocked around me and asked me without any ceremony if I would send them specimens of American plants for their herbaria. I replied in the same tune; that I was just going to cross the Atlantic to collect them, etc. etc. One of them especially clung to me, with a specimen plant the professor was to lecture on and asked me if I would tell him the name! To that question I asked him how long he had been attending the lectures. He replied "two or three years." "*Three years*! and you do not know that plant that grows on the old wall of your father's garden?" It was Linaria cymbalaria, and in three years he had not been able to know that plant. After the lecture was over I asked my friend if there were many students of the same stamp as the one who had asked me the name of a plant growing with him. "No," he said, "not perhaps over two-thirds!!" We went off making comments on the young "savants" we had just left. All of them had received a *college education*.

On the last day of July, 1837, I left Paris for Havre, whence I sailed for New York, where I landed on the 7th of September, 1837.

Then I was on *free*! *land*—with *slaves* not far off, held in bondage by another class of philosophers, of the school of the "Roman patricians," who, like Brutus, who stabbed his father, Cæsar, because he was a tyrant, and he at the same time compelled his slaves to fight against wild beasts in the arena for his distraction. Here allow me a short digression. I have omitted above that before landing and passing at the custom house a countryman of mine, a *sort* of lawyer, asked me: "When the custom house officers will ask you 'what is your profession' what will you answer?" "Of course I will answer that I am a gardener," I replied. "You are a fool if you do that," said he. "Why do you not say that you are a *botanist*?" I could not help laughing and answered him "I suppose I am a botanist as much as you are a lawyer. Probably better, for I know a cabbage from a lettuce, and you, you do not know the difference between a *lawyer* and a *liar*! which for me are often synonymous expressions." When we passed the inspector he was first. He said he was a lawyer! They laughed for a few seconds, then they asked me "Are you a lawyer too?" "No, I am a gardener." "Good!" said one of the inspectors in French, "you have a better chance to find employment than your friend." He was not my friend. He tried to be, but in vain, he got my contempt.

I was in New York, but I had very little money. As a compensation I had quantities of letters of recommendation to people in New York, Philadelphia, Washington, New Orleans and Havana. In this last city I had almost the certitude of a situation as curator of a botanic garden under the governorship of General Tacon, but my desire to learn English made me give up all the recommendations except those for New York, one for

TULIPS AT WASHINGTON PARK, CHICAGO. NO. 1.

Dr. Torrey and one for Mr. Geo. Thorburn. In a few days I had employment with the latter at Astoria, L. I., then "Hallett's Cove." It was only a year or two later that that village was named Astoria from J. Jacob Astor, who had given $10,000 for the *christening*, etc. There I began to work my salvation material and spiritual digging up of the ground to plant trees and shrubs, and the English grammar, to find the "roots of all evils." I have found some but have worn out many spades before I could rest on the laurels that I have cultivated for 54 years. It is in Astoria that I found the greatest number of the cryptogamous plants which I have sent to France. It was at Astoria also that I found the best specimen of the animal kingdom's production, "*a phanerogyne*!" whom I have lost in 1890 - - - - - - . That phanerogyne was not indigenous to Astoria, but was a British production of British and French blood. This plant I have cultivated for 50 years, less a fortnight. When I saw it for the first time I was somewhat puzzled, but in a very short time I found I had discovered a typical form of vegetation and felt wonderfully anxious to have it in my herbarium. But it was not an ordinary specimen of vegetation that one can put between two sheets of paper and dry it. Nevertheless it took me over two months and a considerable number of sheets of paper and ink, with all the quintessence of my rhetoric before I could *press* it. Many will think I knew something about it before my finding. No! nothing at all. Not even its vernacular name, and in less than two hours after my discovery of this *rara avis* it had flown toward the north pole, Albany. When I heard of that flight I thought I had been mystified, and yet I thought I had been able to read the inner nature of my plant. So I had. I found it thereafter, to my jubilation. But since - - - - - . Oh Phanerogyne!! *of half of my life*, of my soul! once more! adieu! adieu forever! adieu tonjours! Vale æterorum!! - - - - - . Here ends the second phase of my life.

Tulips at Washington Park, Chicago.

We present in this issue two views engraved from photographs of sections of the tulip beds at Washington Park, Chicago, as they appeared last spring when in their glory.

In plate No. 1 the varieties shown are Belle Alliance, Yellow Prince, Imperator Rubrum, Cottage Maid and Lacander.

Plate No. 2 shows a bed containing Cottage Maid, Canary Bird and Kaiser Kroon.

The tulips were planted in broad bands through the lawn instead of in beds, one of Supt. Kanst's ideas, and the effect was very rich. The restful effect of the broad stretch of deep green lawn between the bands of tulips was a feature of the planting that does not show very prominently in the photographs.

Some Questions of Art.

THE CHRYSANTHEMUM SHOW.

Under the above heading the New York *Sun* of Sunday, Nov. 8. had rather a biting article. In an artistic sense all was wrong. The gardeners here can grow flowers all right, it states, but they have no idea of art in arrangement or color. Poor fellows! I wonder who we are or what we are good for anyhow? The World's Fair folk say we are simply artists and know nothing about business management, and the *Sun* says we aren't artists at all.

The "exhibition was not beautiful as a whole, nor in any part of the vast amphitheatre could one find a flower or a group of flowers where art in arrangement had given full play to the beauty which nature and the horticulturist had produced hand in hand."

"At the orchid show last winter * * the effect was attractive enough to hint at the future possibilities of success. But this year the bright and showy effect which some folk mistook for beauty was the result simply of masses of crude color spread in all directions, of hundreds of hanging Japanese lanterns and at night of thousands of electric lamps. It was painful to think what a Japanese would have said to such a show."

The orchid show was a one-man affair and every plant and flower exhibited were absolutely at his own command to do with as he pleased and arrange as he

pleased. On the other hand the chrysanthemum show was an open competitive exhibition and for comparison's sake the entries in each class had to be staged alongside of each other, also the different classes of each section, thus compelling a formal arrangement. The Garden Company or its committee of arrangement could not alter this condition of things.

The "floral booth" also comes in for an ill deserved snub. But worse than this booth

"Was an architectural construction—a sort of shrine with floor, columns and canopy entirely composed of blossoms of every kind in patterns of crudest colors and in its centre an urn built in similar fashion, from which dropped a mass of more loosely arranged flowers."

Here the *Sun* was right. We have long since passed this nonsensical sort of floral decoration. The laughing banjoist darkey at the exhibition at Boston at the convention of the S. A. F. a year ago was of the same era and the black eye poor Sambo got and his peremptory kick out of the exhibition should be a lasting lesson to designers of the ridiculous in flowers.

"Almost as awful was the sight of the shelves where glass and pottery 'appropriate' for the holding of flowers were displayed."

Not being versed in art in pottery (or as I am a gardener, in art in anything else according to our critic) I have no comment to offer in this case.

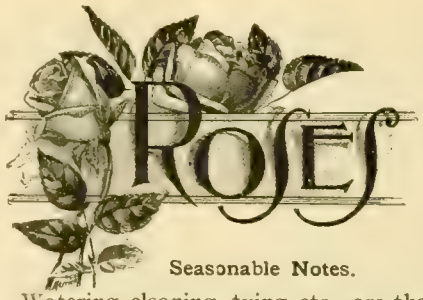
"Awful, too, were the dinner tables decorated in competition for prizes of many good golden ducats."

This too is out of my line, but it did seem to me if more pains were taken with the floral decoration and less with the cutlery, forks, glassware and candles, the tables would be more common sense and serviceable.

Considering the individual varieties of flowers our critic continues:

"It did not seem as though the public or even the judges knew the difference between bad, good, better and best in the matter of color."

And our artistic brother, Battles, of Philadelphia, was there and a judge! Henry, that's awful! Was "Holy Willie" there, d'ye think?



And he must have been a good all-round man. See him handle the nomenclature:

"In general we show little sense of the fact that there is an art in nomenclature as in anything else. * * * For the most part we content ourselves with calling the flower after some awkwardly named man or woman. * * * It certainly showed a lack of imagination that as many as forty florists should have each presented a novelty longing to be called 'Ruth Cleveland.' 'Baby McKee,' on the other hand, had seemingly not been thought of once."

Which goes to show that our artist must have been forty times a Democrat and probably blind of an eye, for the fact is "Baby McKee," a red-headed frowsy tyke, found a place on the table not far from the spotless little Ruth, and there was only one "Ruth." Brother Lonsdale, from the Quaker City, was there, and as he bosses the christening of the little mums, we cannot play a game of two, let alone forty duplicate names, over his broad shoulders. But let Edwin take notice and write in his book of syns "Crazy Jane" Abbie Mendenhall, and "Diana of the Tower" Minnie Wanamaker.

Snow-on-the-Mountain and Ten-Thousand-times-sprinkled-with-gold are suggested to us as some of the Japanese poetical names and for our guidance. Good; now let us have 1,500 such like names, one for each of the varieties of chrysanthemums in cultivation, and we will forgive you for scoring us so severely and thank you for aiding us so greatly.

WM. FALCONER.

Seasonable Notes.

Watering, cleaning, tying, etc., are the main things to watch in the care of roses at this season, and the first will certainly be the most important, for, like all other matters appertaining to growing plants, no exact rule can ever be laid down for the amount to be given or the time to give it. Conditions of each individual place must be the principal guide for while one class of soil can be heavily watered whenever it shows indications of needing it, another class of soil within a short distance of the former may only require very little water in addition to what it may get from syringings for weeks during the short days, and if it gets a little too much may do almost irreparable damage for the entire season; hence every grower must study out the requirements of his own particular class of soil, and be guided accordingly. As a rule light sandy or porous soils can be watered much more freely than those of a heavy or clay nature at this season of the year; but it is never advisable to overwater any plants at this season, more particularly those which have not thoroughly filled all the soil in which they are growing with active roots.

Plants that have been carried over in the same benches as last year and are growing freely can be watered more liberally than young ones newly planted the past season. The amount of water required will also be influenced by the amount of fire heat required. In such mild weather as we have been getting up to this time the soil will remain moist much longer than it would were the weather cold with drying winds, or a large body of snow on the ground causing extra strong light by day, hence additional air to dry the houses up quickly.

HYBRID REMONTANTS.—Where these have been started early and are showing buds they can now be more liberally treated with fertilizers in the form of liquid manure. The temperatures can also be slightly increased, say two to three degrees every two weeks until the buds are showing color, when 56 at night should be the maximum. Until the buds are cut—if really fine buds are the desideratum—do not let them suffer for want of water during any process of their development, even for an hour, or poor, deformed and small flowers will be the reward.

When the flowers are well showing color discontinue the liquid manure and keep a slightly drier atmosphere with an abundance of air during bright sunny days.

JOHN N. MAY.

Wire Training of Roses.

We take three half-inch pipe in four feet lengths (our center benches are four feet wide) and by connecting these with Ls we have an upright frame, one of which we place at each end and one in center of the 100-foot benches. These frames are first fastened firmly at the foot to the bench, then with No. 16 galvanized wire twisted fastened to horizontal top of frames in four places, at equal distances, bringing the wires together at four or five feet lengths and fastening to roof. These wires are about 45 degrees, with the frames we also take two twisted wires across the frames, making all together three horizontal bars on which to fasten the wire for training, No. 16 galvanized wire, thoroughly stretched first (should stretch at least 3 feet in every 100 feet) making it very neat in appearance and prevent after slackness that is often so unsightly. We fasten five rows to each bar of end frame, making 15 wires running the entire length of bed, three on each side of a plant, at different elevations, (we have four rows of plants). These wires are supported by light laths at intervals of eight feet apart and are themselves supported by one wire from rafter. The tying is done by string across from one wire to another, interlacing the rows making the plant fan shape. When refilling benches commences we simply loosen end, bottom fastenings to frame, and the whole thing will go right overhead and back into place without disarranging wires when benches are ready.

Anchorage, Ky. C. RAYNER.

Notes from Mr. James Dean's.

CANNAS.—Mr. D. has got the canna fever; he got a $500 dose of it this year and it is increasing immensely. Star of '91 and Madame Crozy are what he has most of and they are in 6, 7 and 8-inch pots, getting into specimen form.

HARRISII LILIES.—He has been cutting and marketing these for three weeks and he has thousands and thousands coming along in every stage of succession from now till Easter. Take a lesson you big-bulb men: Mr. D. uses the smallest bulbs for his earliest crop and puts three bulbs into a 6-inch pot; or it may be two or one according to the size of the bulbs. These small bulbs give him stems 20 to 24 inches long with one, sometimes two or three flowers and this he insists is better for the retailer than would be a big spike with many flowers.

OLD LILY BULBS.—Mr. Dean, although one of the largest growers of lilies around New York, never keeps over an old bulb, but completely renews his stock every year. This having come to the knowledge of the world he receives many applications for his old bulbs—"send them on and we will pay the express." Now to a hard-working florist this gratuitious business is a little bit cheeky let alone unreasonable. If you want the old bulbs you'd better enclose your check.

HYDRANGEAS.—Mr. D. has lately lifted and potted his otaksas and they are now being kept quite cool. Some of the mid-summer struck plants have been turned out of their pots, shortened a little and laid in in cold frames to remain there over winter.

FICUSES.—The plain green one is the favorite as can be seen by hundreds of fine plants one to three years old and clad with leaves to the pots. A lot of 3 to 4 feet plants of the variegated elastica are having an equal chance in the same house with the plain leaved sort, but a tendency of the variegated parts to become affected with decay spots leads Mr. D. to believe that it is not so good a plant for general purposes as is the typical green leaved form.

PANDANUS UTILIS.—Do what one may this plant nowadays seems to get a little discolored near the tips of the lower leaves.

PANDANUS VEITCHII.—It takes money

TULIPS AT WASHINGTON PARK, CHICAGO. NO. 2.

to get up a stock of this, but it is one of the best plants to have.

COCOS WEDDELIANA.—Doesn't sell as briskly as one might suppose. The palms for the million are the latanias, kentias and arecas.

IRON POT-STANDS.—Mr. Dean uses a large number of them and regards them with much favor. They are mostly in his large palm beds. They take up very little room, don't shade the plants among which they are placed but very little, and are strong enough for any pot.

CYPRIPEDIUM INSIGNE is the only orchid he grows for market.

ONYCHIUM JAPONICUM.—He had some old plants of it last spring and broke them up to increase stock. This was a mistake he assures me, better have dumped them in the rot pile and confined himself to seedlings, they grow so much better and make prettier plants than do old plants divided up.

PTERIS NOBILIS.—There is some doubt about its superiority to some of the serrulata forms, but in order to give it a good chance it is planted wide apart on shallow benches filled smoothly with soil so that the spores may drop as ready upon the ground and there germinate.

DAVALLIA STRICTA.—Is a capital fern.

NEPHROLEPIS DAVALLIOIDES FURCANS.—He is strong on this fern, and has great faith in it. For vase plants for halls or elsewhere where large plants are desirable it is very suitable.

WASHING THEIR FACES.—The palms are as healthy and clean a lot as one can see anywhere, still he had some men going over all his saleable stock giving their leaves a good washing so as to have them looking their brightest and prettiest when they are called out for Christmas.

W. F.

American Carnation Society.

CARNATION NAMES.

The Essex Heights Floral Co., Belleville, N. J., register the name of Florence Van Reyper, for a pure white of good size, substance and fragrance.

Mr. C. Eisele, Philadelphia, Pa., sends the name of Sambo for a sport from Century that is a deep crimson, finely fringed and very fragrant.

Mr. John McGowan has sent sample blooms of those he registered November 17. Iago is a large flowered crimson on a remarkably good stiff stem. New Jersey is a scarlet somewhat similar to Garfield in shape of flower. Katharine Storrs is a great improvement on Dawn in color with a good stiff and long stem. Old Rose is a large salmon pink beautifully fringed. Purple Beauty is a novelty in color, being a light shade of purple, a large flower of good substance.

Sample blooms are a great help in entering descriptions, but the grower should send complete description with names so that in case of accident to blooms they can be properly described in registry book.

Lancaster Pa. ALBERT M. HERR.

Araucarias.

This genus of conifers includes a number of species of great beauty, and while none of them are hardy enough to stand our northern winters, they are becoming very popular for decorative purposes. Many of our florists are growing them in large quantities, and as they become better known are finding a ready sale for them at good prices.

In a young state they are splendid plants for table decoration, or as window plants, their symmetry and graceful proportions eliciting universal admiration. As they increase in size they make fine plants for the lawn in summer and the conservatory in winter. When grown in a large conservatory in a tub or planted out in a border they make noble specimens, the handsomest and most graceful of all the conifers.

But for decorative purposes we don't want large specimens; we want nice, shapely, well-furnished plants from a foot and a half to four feet high. We have to import most of the young plants, as there is no seed to be got in this country, and the seed must not be separated from the cone until you are ready to sow it, as it soon loses its vitality when taken from the cone, while in the cone it will keep for an indefinite period.

To grow these plants well, pot in good loam mixed with some sand; be sure the drainage is good, and do not crowd the plants too closely together in the house; give them room enough to grow in, or

else they will lose their lower leaves or become one-sided. Do not let them get too dry, or spider will attack them and ruin the foliage.

They may be increased from seeds or cuttings, but the former is the most satisfactory method and by it the best-shaped plants are obtained.

A. Bidwillii: When fully grown this variety attains a height of upwards of 100 feet, but a young plant is exceedingly ornamental. The leaves are a very dark green, and the plant is very regular and symmetrical in habit.

A. Cookii: Rather coarse in habit, the leaves being larger than in most of the species. Though not so well adapted for pot culture as most of the species, it is a very ornamental plant.

A. Cunninghamii (the Morton Bay Pine): This is a fine conservatory or decorative plant. Its dark green leaves and pendulous branches are produced in whorls, making it one of the handsomest of the genus.

A. Cunninghamii glauca: This resembles the preceding in every respect save color, which instead of being a rich, dark green, is a beautiful glaucus green.

A. elegans: A plant of great beauty and of a much dwarfer habit than any known species. The leaves are bright green color, and the plant is of a drooping habit.

A. excelsa (the Norfolk Island Pine): The best known and most useful of the species. It makes in a young state one of the most ornamental decorative plants that can be grown. The branches are symmetrical and pendulous and the leaves are bright green in color.

A. Rulcii: In a young state this species resembles A. excelsa, but as it becomes larger it is of robust growth and dense habit, and as it acquires age it becomes very robust and almost coarse in habit.

Maywood, N. J. JAMES S. TAPLIN.

Society of American Florists.

The executive committee of the S. A. F. will meet in annual session at the National Hotel, Washington, D. C., on Tuesday, January 12, 1892. Many of the members of the society no doubt have ideas as to subjects which could be with profit embodied in the programme for next summer's convention or could suggest to the executive committee plans of improvement or advancement in the society's work. Now is the time to bring such matters to the attention of the executive committee that they may receive careful consideration and all such assistance from the members at large is sure to be welcomed by the committee. Communications should be addressed to Secretary Stewart.

The three members of the executive committee whose terms expire with the year 1891 are Frank Huntsman, Cincinnati, O., Wm. R. Smith, Washington, D. C., and J. T. Temple, Davenport, Ia. President-Elect Dean has selected Judge C. W. Hoitt, Nashua, N. H., Jno. H. Dunlop, Toronto, Ont., and J. T. Anthony, Chicago, Ill., as the three new members who will come into office with the new year. W. A. Manda, Short Hills, N. J., has been appointed by Pres. Norton to complete the unexpired two years of Mr. Jas. Dean's term.

Members who have not yet paid their annual dues for 1891 should remit the same to Secretary Stewart before the close of the year and thus keep their names off the delinquent list. According to the by-laws of the society no delinquent member can participate in the meetings or be entitled to any of the privileges of membership until his arrearages are paid up. The printed report of the Toronto meeting is mailed to all members as soon as their dues for the current year are received by the secretary.

New York.

The cut flower market shows considerable improvement, and trade is fully as good as could be expected a week ahead of Christmas. Roses are off crop in several of the largest sources of supply, and in some quarters are positively scarce. The street fakirs or "Greeks" as they are called here are unhappy. They spend a goodly portion of their time just now perambulating in groups from one wholesale house to another looking for bargains that are not to be found, expostulating and arguing over the prices and chattering to one another in foreign lingo. They are away ahead of the ordinary florist in shrewdness and when they make a descent in a group of three or four upon a wholesaler he has got to keep his eyes open and his wits about him or they will manage somehow to get the best of him every time. But he has to tolerate them, for they will be indispensable to him in the spring.

There will be no Jacqs or other hybrids for Christmas except a very few Magna Chartas, and there is demand for many more American Beauties than can be obtained. Dark red roses of all kinds sell at sight. Meteors of ordinary quality selling for the past three weeks at $25 per hundred.

One class of stuff is plenty. There is and will be for Christmas all the bulb stuff that can possibly be used. Roman hyacinths and paper white narcissus are particularly abundant. For the narcissus there is but little demand, the prices realized being such that the cost of the bulbs is scarcely covered.

Lily of the valley from stored pips is plentiful and of very extra quality. No flowers from this year's crop have been brought in yet.

There is a great scarcity in this neighborhood of small ferns suitable for window boxes and jardinieres. The growers say that the seed has come up very poorly this year.

At the December meeting of the Florists' Club four new members were admitted and eight more were proposed. A photograph of the St. Louis chrysanthemum show was received from Mr. Alex Waldbart with the compliments of the St. Louis Club. It was voted to reciprocate with a view of the Madison Square Garden exhibition.

President-elect Dean in his speech of acceptance spoke very earnestly in favor of the club's having a meeting room of their own, and urged the members to turn out in large numbers at future meetings. It is likely that a regular club room will soon be a reality as several of the most active members of the club have taken hold of this matter in earnest, and propose to see if something can not be done. On the table at the club meeting was a vase of very fine mignonette from Dailledouze Bros.

The annual supper of the club will take place on the evening of Monday, Jan. 11. This being the day preceding the meeting at Washington of the executive committee of the S. A. F. it is expected that the club will be favored with a number of the executive committee members as their guests.

At the last meeting of the bowling club a challenge was received through Mr. Doran, from the Acme Bowling Club, of which Mr. Doran is captain, for a match game to be played on some Thursday in January. The challenge was accepted and the matter of date left to be settled by the two captains.

It is also proposed to arrange a handicap for the members of the team for a medal valued at $10, with a leather medal of unique design for the unfortunate making the smallest score.

The proposed plan for an exhibition at Madison Square Garden next spring has been abandoned. But definite arrangements have been made with the Madison Square Garden Co. for a chrysanthemum show for the first week in November next and for a spring show in 1893. The agreement which has been perfected is considered very satisfactory by the committee of the Florists' Club. It is proposed that the next chrysanthemum show shall be of the highest quality and inferior exhibits will not be admitted. Unwashed pots, soap boxes and other abominations which are too frequently seen at such shows will be unconditionally sat down upon.

The prizes offered will be liberal enough to permit of every exhibitor staging his exhibits in an artistic and finished manner, and to make the bringing of rubbish of any sort unnecessary.

In the cut flower department no flat arrangement of blooms will be allowed, and all flowers must be shown with good stems and their own foliage. Throughout every department of the exhibition a high standard of excellence will be the rule.

Mr. J. H. Taylor has been confined to his home for the past week by sickness, with symptoms of pneumonia.

Boston.

The outlook for Christmas trade seems to be good, judging from the reports of shipping orders, as given by the wholesale dealers. Much, in fact everything, depends upon the weather of the next few days.

The wholesalers are receiving shipping orders with caution born of former years' experience. Cut flowers during the past week have been in fair supply and the street fakirs are still able to get hold of enough to keep their boards well decorated, although the quality handled by these gentlemen just at present is none too good and most of the stuff they show indicates by its appearance that it has been passing a few days of confinement in somebody's cellar. The retail stores have found trade very dull during the past week. The wholesalers have been more fortunate; for the shipping demands have kept up very well.

Violets are plenty and good. There is no reason to doubt that Boston can, after January 1 at any rate, supply the country with all the double violets wanted. Carnations are apt to be plenty for Christmas. The growers are holding them back and there is a big stock of them in the neighborhood. Asparagus plumosa is done up for the present. All the growers are short of it. Smilax is somewhat overstocked. Roman hyacinths and paper white narcissus are also coming in too fast. There will be no extra fancy roses in this market worth counting, for the holidays. Neither Jacqs, Hybrids or American Beauties are to be had in any quantity; any one store could probably use alone all of these that will come in.

In greens the best demand is for holly. Mistletoe goes fairly well. Palm crowns and needle pines go slowly as yet.

Mr. N. F. McCarthy has just returned from a month's trip west, having gone as far as Minneapolis. He reports a great success and unexpectedly large orders all along the route for the Boston Florists' Letters and Japanese rose vases which he makes a specialty of.

One of the pleasantest occasions of the season was the presentation of a handsome hall clock as a wedding gift to Mr. and Mrs. P. Welch by their gardener and florist friends, on the evening of December 17.

The affair came off at Mr. Welch's residence in Dorchester, where he has just started housekeeping. Mr. Ed. Hatch had been detailed as a committee to keep Mr. Welch out of the way until the proper time on that particular evening, and he performed that duty well. The clock, the caterer and about 25 of the boys were in full possession of the house, when about 8:30 p. m. Mr. Hatch and Mr. Welch appeared at the door. Before he had time to fairly recover from his surprise at the state of affairs Mr. Welch was led to the front of the clock by Mr. Hatch, who in a characteristically witty speech informed him that this was a small token of the esteem and good wishes of his business associates, and reminded him in a deprecating manner that 8:30 p. m. was a somewhat unseemly hour for a newly married man to appear at his home, expressing the hope that with the assistance of the clock as a reminder he would try to do better in the future. Mr. Welch made an appreciative response and thanked his friends in a most expressive manner for their remembrance, and concluded by extending all the privileges of the house to his guests, whereupon Mr. Hatch taking him apparently at his word at once threw off his coat and amid great merriment made a bold and almost successful attempt to carry off the bride. This was the beginning of the fun which was at a high pitch until the "wee sma' hours," Mrs. Welch contributing not a little to the enjoyableness of the occasion by her beautifully executed piano selections and songs.

Chicago.

Of late the daily papers have been showing up the disreputable methods of the "crape chasers," and in some cases reflections were cast upon the whole trade. As all the reputable florists look upon these ghouls with fully as much disfavor as the general public this was rather galling, and a special meeting of the Florist Club was held last Friday evening to take some action toward placing the club as an organization upon record before the public. All the daily papers were given notice of the meeting and that they all took great interest was evidenced by the fact that every one had a representative present.

After the object of the meeting had been stated the following resolution was introduced:

WHEREAS, Certain parties in this city, who claim to be florists, are bringing discredit upon the trade by employing brazen solicitors to intrude their presence into houses of mourning in search of orders for funeral flowers, be it

Resolved, That the Chicago Florist Club, including within its membership nearly all the reputable florists of Chicago, views such practices with abhorrence, and repudiates those who have so lost all sense of common decency as to engage in them Be it further

Resolved, That any member of this Club found guilty of employing such discreditable methods to obtain business, be promptly expelled.

A few speeches were made in favor of the adoption of the resolution, but as it was all one way—all pro and no con—the question was called for and the resolution was adopted by a unanimous vote.

Then another phase of the question was brought up, that of certain parties who solicit on their own hook and take orders obtained to a florist to be filled, securing a commission on the sale. It was a difficult point to deal with, but action was finally taken in the appointment of a committee, consisting of Messrs. J. T. Anthony, T. J. Corbrey, Jos. Curran, H. F. Halle and E. Wienhoeber, to compile a list of such parties and supply same to the club which could then request members not to fill orders tendered by them.

The proceedings of the meeting were very fully reported in the Saturday morning papers, and thus the main object of the meeting, viz.: to relieve the trade as a whole from the odium thrown upon it by the "crape chasers," was accomplished. And if the recommendations of some of the members in speaking at the meeting, and reported in the papers, be followed, "crape chasing" will be a much more hazardous occupation than formerly. The universal recommendation was that when they present themselves at the door, they be kicked down the steps.

Samuel Muir has received a compromise verdict of $650 in his suit against the Chicago Gas Light and Coke Co., for damage done by gas escaping from the company's mains into his greenhouses. He sued for $2,500. But the Gas Co. has moved for a new trial. It is fighting the case bitterly, for if the present decision is permitted to stand it will establish a precedent that will greatly extend its liabilities. The final outcome of the case is awaited with interest as it will affect in a measure all similar claims for damages from this cause by florists, and those whose houses adjoin gas mains are often sufferers from escaping gas, coming up through the soil from leaking mains.

The florists' windows and store fronts are gay in holiday attire. The Christmas bell has become somewhat of a chestnut, but there is still a demand for it.

Holly has been bought in enormous quantities and by present appearances there will be not more than enough to supply the demand. Crescent wreaths made of cape flowers in pretty shades of pink, red, yellow, pea green, purple, etc., sometimes tied with a ribbon and sometimes a fanciful bow of grasses, are the leading articles in Christmas decorations this year.

In cut flowers the demand has been active and the supply, particularly the latter part of the week, was very limited. The cause for this was doubtless the fact that Monday of this week the holiday prices of the wholesale men took effect, so every grower who could possibly hold his stock for this week did so, hence on last Saturday flowers were very scarce.

The quality of the stock is not as good as it might be. Roses particularly show up rather poor; carnations are fairly good. Violets, but few in the market, are mostly very fine, but the market does not supply the demand by one-half.

There are some splendid Harrisii lilies with six and seven blooms to a stalk, as finely grown as in the spring. One of our growers actually threatens to show us some well grown Hybrids for Christmas. This will certainly be a novelty for Chicago.

As the date for the next regular meeting of the Florist Club falls on Christmas Eve. no attempt will be made to hold a meeting.

Mr. John Thorpe has returned from his eastern trip and reports great enthusiasm everywhere for the World's Fair. He obtained promises of the donation of large plants from a great many gentlemen in the east who own private collections and also from several public institutions. Among these are Messrs. Geo. W. Childs, Philadelphia; H. H. Hunnewell, of Wellesley, Mass.; Jay Gould, Irvington on Hudson, N. Y.; Miss Baldwin, Philadelphia. He also secured for the Fair the bamboos that were exhibited at the Centennial in Philadelphia and specimen plants from Girard College.

Work will soon begin upon some temporary greenhouses in which plants received can be cared for and got into exhibition condition. Immense quantities of plants will be propagated and displayed in addition to those sent in for exhibition.

Work is progressing rapidly on the new conservatory at Lincoln Park owing to the unusual favorable weather.

The next regular meeting of the Horticultural Society of Chicago will be held Saturday, January 2. At this meeting the final details of the proposed spring exhibition will be arranged.

Mr. R. J. Mendenhall, of Minneapolis, is still at the Lincoln Park Sanitarium, where he is receiving much benefit. He is now able to walk without a crutch and hopes to come out soon entirely free from his old enemy—rheumatism.

Philadelphia.

Business has come to a pretty state in Philadelphia. Monday, Dec. 14, was a nice bright day; the weather had been fine for some time and as is usual on Monday there was the extra accumulation of two days' cut to be disposed of.

The demand was not as great as the week previous, but in spite of these conditions it was decided that the price must go up, but just how much was the question.

There is a large retail establishment not far from Broad street station where most of the growers strike first and if the price asked "goes" here that settles it and all the other stores are expected to pay the advance without question. On Monday, Dec. 14, the growers congregated in this place as usual, but could not agree on the advance, and finally left their slips without prices, agreeing to take what one large grower who had not yet arrived would charge for his and be satisfied. It would thus seem that it is not the natural law of supply and demand, but what one man chooses to ask, that is to regulate the price of flowers in this market.

For the last week there has been no scarcity of anything if we except carnations and double violets. Of the latter very few are coming to this market and they are so poor as to be not worth talking about.

Indications point to a good Christmas. Holiday greens line the streets everywhere. Holly and Mistletoe is very fine and seems in good demand.

Mr. Robert Craig is confined to his bed with pneumonia. This is his second attack, he having had a severe spell some three years ago. It is to be hoped that this is taken care of in time and that he will soon be about again.

At the last meeting of the Penna. Horticultural Society the silver medal of the society was awarded to Mr. John Burton for his new rose, the "Pink Beauty." This is the color and appearance of the flower,

but we have not heard of its being christened as yet. If there is anything in a name it deserves the best that can be given to it.

Pittsburg.

The chrysanthemum show has placed the Florists' Club way ahead financially; a handsome sum has been deposited, which may serve as a contingent fund in '92. The support and encouragement from all sides assures a big show for next season.

A charter will be obtained and the name of the club will probably be changed to "Pittsburg Florists' Club," our present title being entirely too long.

Your report of premiums awarded at our show gave some erroneous impressions. I send you herewith the official list of awards which would be pleased to have you publish in the FLORIST.

T. F. B.

[We give below the winners of *first* premiums, omitting seconds and thirds owing to want of space.—ED.]

In chrysanthemum plants, open to all, A. W. Smith received firsts for 12 plants, one of a kind, 5 white, 5 yellow, 5 pink, 5 fancy colors, specimen white, specimen yellow, specimen pink, specimen fancy and 5 standards; to C. K. Hoffmeyer for specimen standard; P. S. Randolph for 20 plants in 20 varieties in not over 5-inch pots. Mr. Smith had no competition in most of the above classes.

In the plant classes open to commercial growers only, A. W. Smith took all the firsts, viz., for 10 plants, 6 plants and 5 standards.

In cut blooms on long stems C. K. Hoffmeyer was first for 20 varieties, 3 blooms of each, and T. F. Beckert for 10 varieties, 3 blooms of each. In short stemmed cut blooms T. F. Beckert was first in both classes, viz., 20 varieties and 10 varieties, one bloom of each.

In cut roses F. Burki was first for Perle, Hoste, Gontier, Niphetos and Waban; Hartman Bros. for Mermet, La France and Albany; J. R. & A. Murdoch for Bride; B. A. Elliot Co. for Am. Beauty.

For 100 carnations, not less than 3 varieties, F. Burki was first.

In decorative plants J. R. & A. Murdoch were first for best 25, and A. W. Smith for 12 varieties ferns.

Of the special prizes R. C. Patterson was first for handle basket of chrysanthemums, vase of long stemmed chrysanthemums, bride's and bridesmaid's bouquets and boutonnieres, vase of roses and flat basket of chrysanthemums; J. R. & A. Murdoch for oval basket of flowers, vase of long stemmed yellow chrysanthemums, and funeral wreath; N. Patterson for most artistic display of cut orchids; John Herron for best display of orchids in bloom; B. A. Elliott Co. for dining room decoration and best box of cut flowers.

Toronto.

The second annual dinner of the Gardeners' and Florists' Club was held at the Allison Hotel on Tuesday last (15th). The weather was bad, but in spite of that the boys turned out in force and had a good old fashioned dinner and a good old fashioned time too. The speeches were short and well interspersed with songs. The president of the club, Mr. John Chambers, is nothing if he is not a good chairman, his tact, good humor and fairness overcame every would-be hitch and everything runs as smoothly as a well oiled machine. The mayor and several of the aldermen graced the festive board with their presence and respectively relieved themselves of suitable speeches having a strong election flavor about them (civic elections come off on the 4th prox.). The club is doing good work among these aldermen, especially with those on the Parks and Gardens Committee, their horticultural education having been hitherto sadly neglected.

Mr. H. A. Bunyard represented Messrs. Pitcher & Manda and did it well. I regret to say that he was the only American present. The invitations sent out gave very short notice and almost the only one who could really be expected was the "Great Scott" of Buffalo, but as the boats have stopped running across the lake now, the journey is a much longer one than in the summer time and he probably did not feel able to face it.

The floral decorations were arranged by Mr. C. Arnold in his usual artistic style. Mr. G. Vair sent down some magnificent spikes of calanthe and some exhibition chrysanthemum blooms.

I afterwards heard of an item which was on the programme, but which for some cause or other did not come off. The proprietor of the hotel is also the proprietor of a most disreputable looking game cock, the hero of a hundred battles from which he had emerged minus several useful members of his body. This delapidated specimen of the feathered race, whose fighting days were long since past and gone, was to have been brought into the room and exhibited as the "little bird" who whispered into your correspondent's ear who was going to be the president of the club for the year 1892, but whether the fear of lacerating the feelings of your correspondent or those of the rooster was the cause of the event not taking place, did not transpire. I need scarcely assure you, Mr. Editor, that this antiquated rooster was not the "little bird" who volunteered the information which turned out to be incorrect; your correspondent keeps in mind the old copybook phrase "evil communications corrupt good manners," and is always very careful what breed of roosters he associates with—'Nuff sed.

Mr. H. Dale and Mr. W. Muston responded to the toast "Wholesale Florists." The former gave some particulars of the enormous increase of trade during the last few years; in the little town of Brampton a short distance out of Toronto where he lives there is now an area of 65,000 feet of glass.

Things look well for a good trade this holiday season and florists are in consequence hustling, each one making all preparations possible to capture the extra dollars that are flying round about that time. A merry and prosperous Christmas and New Year to all. E.

London, Ont.

Now that the "mums" are gone—"and none too soon"—business is beginning to swing round and right itself. It may have been over-production, or the general depression in business, or both, but be the cause what it may it is conceded that "mums" have not been a paying product this season.

The social event of the season occurred on the 11th inst—"the Hunt Ball." It caused quite a brisk demand for good flowers. The supply, however, was nearly or quite equal to the demand.

Roses and carnations are fairly plentiful and of good quality excepting Spray, which does not appear to be doing well in this section this season; it bursts badly.

The annual meeting of the Florists' and Gardeners' Club for election of officers took place on the 7th inst with the following result: President, G. W. Rennie; Vice-President, F. Dick; Secretary, Wm. Gammage; Treasurer, Geo. Cairncross; Representatives to Western Fair Board, Geo. Cairncross and Z. Weston.

The annual report showed the club to be in a good healthy condition, having made a gain of thirteen members during the year. It also showed a neat sum to its credit. An oyster supper is announced as a drawing card for the next meeting.

The Advertising Department of the AMERICAN FLORIST is for Florists, Seedsmen, and dealers in wares pertaining to those lines ONLY. Please to remember it.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

WE HAVE received from Mr. F. T. McFadden, Cincinnati, for whom Mr. John Rose is gardener, a magnificent specimen plant of Cyclamen persicum giganteum. The plant measures 2 feet 4 inches across (7 feet in circumference) and bears 60 open flowers, with as many more coming, and none less than an inch and a half deep, and heavy, massive foliage without a single defect. We can readily understand how such plants would easily command the prices named in a former note. In any large city such plants should retail at $5 each easily and sell quick. For house decoration they are fully as effective as a $5 vase of roses, and the plant would give pleasure for a considerable time while the roses would be gone in a day or so. Certainly the cyclamen should receive more attention from growers of plants for house decoration in winter.

A CARNATIONIST!—Now that the carnation has attained to the dignity of having a national society to look after its interests it is eminently proper that growers of carnations should have some expressive title equivalent to "rosarian" as applied to growers of roses, and "orchidist" as applied to growers of orchids. Hence we are pleased to see Mr. Edw. Swayne boldly announce himself as a "carnationist." Such a title is needed and will undoubtedly be adopted.

A REMARKABLE specimen of mignonette has been sent us by Mr. H. H. Francis, Madison, N. J. The stem has no less than eight branches, each bearing a fine raceme of flowers of very large size. Mr. Francis writes that it is a seedling of 1889 that he has named "Eloise Francis" and that he has single plants that will measure 3 feet across, the stem being one-half inch in diameter. The stem sent us was certainly as full of flowers and the flowers of as fine quality as one could wish.

ON November 20 we received from Mr. W. L. Swan, Oyster Bay, L. I., specimen blooms of his seedling chrysanthemum Lady Townsend. The blooms were of fair size and a very fine bright yellow in color. Mr. Swan sends them "as an evidence of the interest felt in chrysanthemum culture in this part of the world."

A NEW chrysanthemum raised by Nathan Smith & Son, Adrian, Mich., which they have named J. A. Pettigrew in honor of the accomplished superintendent of Lincoln Park, Chicago, will make a noise when it is introduced to commerce. It is of very large size and of a shade of pink that will take.

IF YOU have anything to sell to florists, nurserymen or seedsmen you ought to have an advertisement in our forthcoming Directory and Reference Book. An advertisement in this book will be constantly under the eyes of possible buyers for the next two years.

WE HAVE RECEIVED from Messrs. Ellwanger & Barry, Rochester, N. Y., some beautiful specimens of the Beurre d'Anjou pear. They were of very large size, in splendid condition and of excellent flavor. It is decidedly the finest winter pear we have yet seen.

News Notes.

AVONDALE, PA.—Mr. Charles T. Starr is down with typhoid fever. He is now improving, but very slowly.

MT. VERNON, N. Y.—Matthew Dummett is completing a new rose house, 20x100, built in modern style, heated by hot water.

COUNCIL BLUFFS, IA.—The Western Iowa Horticultural Society held its sixteenth annual session in this city Dec. 8, 9 and 10.

LOUISVILLE, KY.—Miss J. Miller, late with C. W. Reimers, has opened a store near Masonic Temple. Edw. Morat has withdrawn from the firm of F. Morat's Sons.

ATLANTA, GA.—The Atlanta Hort. Society has decided to hold a spring exhibition, the dates to be announced later. About $500 will be offered in prizes, also a number of silver cups and gold medals.

WORCESTER, MASS.—Horticultural Hall has been undergoing a thorough overhauling and partial remodelling, the improvements costing in the neighborhood of $17,000. The library has been entirely refitted and refurnished. The hall is now one of the prettiest in the city.

GERMANTOWN, PA.—At the meeting of the Germantown Horticultural Society December 10 officers for the ensuing year were elected as follows: Benj. H. Shoemaker, president; Jonathan Jones, Chas. J. Wister and John F. Sibson, vice-presidents; Thos. B. Meehan, secretary; Joseph Meehan, treasurer. Prof. Thomas Meehan delivered an interesting address on ferns.

HOUSTON, TEXAS.—The Harris County Chrysanthemum Society was organized December 1. The new society is officered as follows: Theo. Hillendahe, president; Charles Herman, vice-president; William M. Bamberge, secretary; A. Stude, treasurer; and James White, chairman of the committee on classification. It was decided to have a chrysanthemum exhibition in this city in November, 1893, and to offer $250 in prizes.

Catalogues Received.

Albert M. Herr, Lancaster, Pa., plants and rooted cuttings; V. Lemoine et fils, Nancy, France, plants; Gaines, Coles & Co., State Line, Miss., nursery stock; James Mott, Orlando, Fla., nursery stock; S. B. Field, Roselle, N. J., rooted cuttings; C. S. Harrison, Franklin, Neb., Rocky Mountain evergreens; Lambert & Reiter, Traer, Germany, new hybrid tea rose Kaiserin Auguste Victoria; Frederick Roemer, Quedlinburg, Germany, flower seeds; G. F. Thompson, Wellsville, Kans., retail bulbs and plants; C. E. Allen, Brattleboro, Vt., bulbs and plants; George Vestal, Little Rock, Ark., nursery stock; Harlan P. Kelsey, Linville, N. C., native trees, shrubs and plants; John R. Box, Croydon, England, tuberous begonias; W. Baylor Hartland, Cork, Ireland, daffodils; V. H. Hallock & Son, Queens, N. Y., gladioli and plant and bulb novelties; E. H. Krelage & Son, Haarlem, Holland, Darwin tulips.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

EVERYBODY wants to know where the supply of seed sweet peas is to come from.

MESSRS. Pitcher & Manda will it is said establish a seed store in New York city.

MR. CHAS. P. BRASLAN was married December 15 to Miss Georgie Fisher, of New York.

THE TIME draws near when we shall all know the name of that 400 tomato and of course feel easier.

MR. AND MRS. A. H. GOODWIN, of Minneapolis, have gone south for the benefit of Mrs. Goodwin's health.

ONION SEED prices at retail are said to be fixed at from $1.50 to $1.60 for red and yellows, whites still uncertain.

"SEEDS THAT GROW" seems to be a refrain on which many changes are rung in the 1891 advertisements. "Avoid blowhard's seeds" is not a bad phrase which D. M. F. & Co. use.

THE Harnden Seed Co., of Kansas City, are out with their 1892 catalogue. John Lewis Childs and Northrup, Braslan & Goodwin Co. are also said to have completed their annuals.

THOSE Nebraska vine seed crops are still shrinking. The smaller contracts will not need carload rates—they can be filled(?) by mail. It's hard on the growers just the same. Too many eggs in one basket all around.

Indianapolis, Ind.

At the meeting of the Indianapolis Florists' Club held December 8, officers for the ensuing year were elected as follows: J. J. B. Hatfield, president; Henry Rieman, vice-president; Wm. G. Bertermann, secretary and treasurer. The meeting was considered the best we have ever held. Several papers of general interest were read, one on "Heating apparatus for a small place," by B. A. Alley, an amateur florist, was well prepared and showed practical study of the subject. Another paper on the cultivation and fertilization of chrysanthemums was read by Henry Rieman, a young florist who has been very successful in raising new chrysanthemums and who has been the principal prize-winner at our several shows. This paper was clear and to the point.

Some discussion was had as to the advisability of the club assisting in planting flower beds and window boxes at the different school houses. This subject was set for further discussion at next meeting. Some move will also be made to get the parks and surroundings of the public buildings into better shape. W. B.

YOU WILL certainly want a copy of our new Directory and Reference Book, to be issued in January. The price is $2 and it will be worth many times that to you. Order a copy now.

EXTRA CHOICE FLOWER SEEDS.
List free on application.
FRED. ROEMER, SEED GROWER
QUEDLINBURG, GERMANY.

CYCLAMEN FLOWERS will sell if they are good; cyclamen plants also. The **giganteum strain** is the only one worth growing if you grow for sale, and there are strains and **strains** of the **giganteum** also. It is not how cheap; **but how good!** Remember that **Gardiner's strain of giganteum** comes high; but it's worth the difference. Sow **at once** for next winter's flowering. $2.00 per 100 seeds; $8.00 for 500 seeds; $15.00 for 1000 seeds.

FLORAL DESIGNS,

The Cut Flower Worker's friend. Fine book of 160 pages. Send **$3.50** for it, to
J. HORACE McFARLAND, Harrisburg, Pa.

Mention the AMERICAN FLORIST when writing advertisers on this page.

St. Louis.

The exhibition committee of the Florists' Club met last Monday, Dec. 16. In the course of the meeting a discussion took place in regard to the advisability of adopting some rule by which any member of a firm might be prevented from competing against another member in the same class. Mr. Michel remarked that it would not prevent an employer from hiring his employe to compete against him. The premium list will be ready by Feb. 1.

Cut flowers are in fair demand. Roses firm with somewhat of a run on Beauties. Trade in general good, with a bright prospect for Christmas. The weather is cold, but delightful for the time of year.

Messrs. Young & Sons have a very fine show of roses. They are in favor of steam heating. A forty-horse power steam heater has taken the place of one small steam and three hot water plants, which makes an annual saving of over $300 in fuel, not counting the minimum of labor necessary for the former. For this large heater screenings from any of the better grades of soft coal can be used; Messrs. Young are using those from Big Muddy, which costs $1.65 per ton, with a very short haul. The total cost of changing plant was $2,000. They are contemplating heating all of their houses in this way.

"La Grippe" is now quite popular and has gripped several members of the fraternity. J. W. D.

THE Illinois State Horticultural Society held its 36th annual meeting at Olney Dec. 8 to 10. There was a good attendance and the display of apples was very fine. During the year the society received $4,778.40, paid out $4,320.42 and now has on hand $4,457.98. The officers for the ensuing year are: President, T. E. Goodrich, Cobden; Vice-President, G. W. E. Cook, Lacon; Secretary, A. C. Hammond, Warsaw; Treasurer, Arthur Bryant, Princeton. The next annual meeting will be held at Champaign.

SEND IN your order now for a copy of our new Directory, to be issued next month. Price $2.

Chrysanthists

Should not fail to have their signs in our new directory and reference book, among the pages devoted to chrysanthemums. Advs. must be received by Jan. 1 at the latest.

American Florist Co.,
CHICAGO.

Jessica in the Lead.

This white variety was recommended by Mr. J. N. May, Summit, N. J., last year. This Chrysanthemum I grew this fall, and cut my first blooms Oct. 2, they being from 6 to 8 inches across. Also an immense stock of Gloriosum and L. Canning.

$2 a dozen; $15 a hundred.

ROBT. LUEPKE, E. Liverpool, Ohio.

Mention American Florist.

EXTRA VERBENA SEED.

IMPROVED GIANT.

This magnificent strain of Mammoth Verbena has given perfect satisfaction to my many customers in the florists' trade, and is justly claimed to be the finest in cultivation. The florets measure over an inch in diameter, borne in immense umbels. Very free flowering and of the finest colors. Every florist should be sure to sow of it. Trade pkt. 25 cts.; 3 pkts. 50 cts.; pkts. $1.00.

JOHN F. RUPP, Shiremanstown, Pa.

Mammoth Verbena Seed.

NEW CROP NOW READY. Choicest mixed varieties in the brightest colors. Per trade packet, 50 cts; 1-4 ounce, $1.00; per ounce, $4.00.

The strain we offer this year is far ahead of that sold last season with such satisfactory results. Only the richest colors have been retained, and the largest flowers selected for seed. Seedling plants are now preferred by the leading florists for spring sales because of their vigor and freedom from rust. With this strain to depend on there can be no doubt about the success.

DREER'S DOUBLE HYRRIDIZED PETUNIA SEED, so well known to the trade for the past 30 years, constantly inproving by judicious hybridizing. Trade pkt. containing 700 seeds, $1; small paper 15c.

DREER'S SINGLE GRANDIFLORA MOTTLED AND STRIPED PETUNIA. This strain will give splendid results in pot culture, as well as open ground. It is rich in colors and markings, and of largest size. ⅛ ounce, $2.50; trade packet, 75 cts.

Cobea Scandens..... per oz. $.75 Centaurea Candidissima, per oz. $2; per 1000 seeds, 50c.
Smilax Seed, per lb. $8 " .60 " Gymnocarpa, " 50c. " " 30c.
☞ Preliminary flower seed list to the trade of seasonable seeds now ready; mailed free to the trade.

BRACKENRIDGE & CO.

CANE STAKES.

Established 1854. **Govanstown, Md.**

Berry Wreaths.

At the funeral of Lord Lytton, among the wreaths on the casket that crowned the simple catafalque were three, one of laurel from Lady Lytton, another of violets from Mr. Whitelaw Reid, the American Minister; another of berries from the British Chamber of Commerce.

As flowers at a funeral *should* represent a sentiment, and as the use of them as a matter of taste is sometimes overdone (though not from a florist's point of view) what can be more appropriate for an elderly person than a simple wreath of berries and green, which represent the ripeness and fullness of a good and useful life? J. T. TEMPLE.

Cutting Outdoor Grown Tulips.

Will some reader of the FLORIST kindly tell me the proper way to cut tulip flowers, from bulbs bloomed in the open ground?

How near the ground can the flower stems be cut and not injure the bulbs for future flowering? And is it absolutely necessary that the leaves be cut with the blooms? My query refers entirely to outdoor grown flowers.

A SUBSCRIBER.

Decoration of Graves.

Will some reader of the FLORIST who has had experience tell us what is best to use for decorating graves in cemeteries in summer time and what is the average charge per year for care of a grave.

M. & W.

YOU WILL make a mistake if you permit our new Directory to go to press without your advertisement in its pages, for you will have missed an opportunity to make a very profitable investment.

J. Horace McFarland Company.

INCORPORATED 1891.

How does that look? It means that I have got to say "we" now, because there are more of "us"; but I'm in good company, I believe! Well, then, "we" are bigger than J. H. McF. all by himself, and we've enlarged, increased and extended his facilities for doing the right sort of printing for florists and the other plant and tree people. A fine new electrotyping outfit and a lot of other new machinery will help the Company to keep J. H. McF. hustling after work, and doing it! The florists are responsible for this move, and they want to notice that we're ready to do Catalogues in great shape at the Mount Pleasant Printery, and do them on time. Write to

J. HORACE McFARLAND COMPANY, Harrisburg, Pa.

[*P. S. by J. H. McF.*—The "we" will go better after a bit. Just notice that I'm right "in it" yet, at the same old stand, and the others are helping me to do better for all of us, and you!]

Killing Greenfly.

The question is often asked as to the best method of killing greenfly on roses, etc. I am using a method which I have not seen mentioned in your valuable paper, and find it most effective. I use a small oil stove, place a piece of tin over it and strew some tobacco dust on the tin. The stove being lighted gives off a very strong fume which destroys greenfly quickly and does not injure the plants, neither does it require watching as there is no flame. In a rose house 60x12 in which the aphis was quite thick they were entirely destroyed in one hour. The stove which I use has only one burner, but would recomend a two-burner stove for a larger house. The amount of tobacco dust used for a small house was a 5-inch pot full. I would like to hear from some of your many correspondents after using this method as to whether they find it as effective as I have.

Buffalo, N.Y. GEORGE STAFFLINGER.

Blue Roses.

A florist has succeeded in producing blue and green roses by an extremely simple process In order to obtain these results he takes a white rose bush and waters it throughout the winter with a solution of Prussian blue if blue roses are wanted and a solution of sulphate of copper if the flowers are desired of a green color.

The above from the Springfield, Ill., *Monitor* is probably going the rounds of the daily press. It seems we florists are "green" now, but will have the "blues" when the florist mentioned in the item comes into market with his roses.

A. CLAUS.

Lily of the Valley Rotting.

What is the matter with the lily of the valley this year? It seems to rot off with me instead of producing flowers.

THE CHRISTMAS TRADE seems to have been fully equal to that of past seasons and generally satisfactory in spite of unseasonable weather and other drawbacks.

YOU STILL have until January 10 to get an adv. in our new trade directory. Don't fail to improve this opportunity quickly.

WHEN you write an advertiser tell him that you saw his advertisement in the AMERICAN FLORIST.

Our Telephone.

"Hello, central, please connect us with Natick, Mass."

"There you are, who do you want in Natick?"

"Waban Conservatories, please."

"Waban Conservatories connected, go ahead."

"Hello, Mr. Montgomery, the FLORIST wants to know how the Waban is getting along."

"The Wabans are all right. They are coming very fine with us now and are beginning to sell much better. Up till recently we had difficulty to get as much for them as for Mermets, but from this time out they will probably run beyond the Mermets. A few days ago and again yesterday we had to furnish a lot of them for wedding purposes. They used them for the bride's bouquet and liked them very much. There has been some prejudice, largely on account of the bad showing in the fall. Everybody run it in before it was fit to show. But this is an experience which every new rose has to go through. The Waban has got to come, there is no question about that. But it has got to fight its way like everything else.

"You know there was considerable talk in the fall about its being mildewy, a weak grower, etc.; it's all nonsense. You would have to get a microscope to find any mildew on it here; and as to growth, the shoots are as strong and vigorous with us now as any Mermet ever was, as those who are interested can see by paying us a visit."

"How about those deformed buds which everybody has been complaining about? Have you had any such trouble?"

"Yes, we had considerable of it, but there is very little of it now; it don't show enough to amount to anything."

"How do you account for the deformity?"

"Hard propagating; everybody driving them for all they were worth. What can you expect when a few plants must be run to turn out 70,000 or 80,000 small plants in a short time? After two or three years that trouble will all disappear.

"It doesn't want to be run as hot as a Mermet, in my opinion. Run it too hot and you get weak stems and poor buds. With Papa Gontier temperature it comes more perfect, better color, better every way and you will get stems just as good as Mermet. With good strong light, well up to the glass, it will throw but a small percentage of deformed flowers. I notice that the strong shoots from the bottom are most likely to be affected, the buds from the second cutting averaging much better. But this is not a new thing; we have had the same trouble with Mermet at times."

"Do you still continue to grow Cornelia Cook?"

"Yes, it still goes; there is always a demand for a certain quantity for use in large vases. It is a question if anything on the place pays, dollar for dollar, as much as they do. The price runs about double that of first class Brides. But they must be big specimens; small Cooks we can't sell at all. As is generally known we grow all our Cooks on solid beds and trellises. We can do nothing with them treated as we do Mermets and Brides.

"We cannot get them heavy wooded enough when grown up to stakes. The plants we are now cutting from have been in the beds about five years and they seem as vigorous as they ever were.

"About once in two years we lift up the roots and put in fresh soil, for the Cook is a heavy feeder.

"In cutting the buds we cut right back to the hard wood and do not leave one or two eyes of green wood as is customary with Brides or Mermets. When the wood gets too thick we thin out by cutting away some of the side branches. After five or six years the plants get too big and gnarly and we then throw them out."

"Couldn't you shorten the plants back?"

"I am opposed to pruning back teas at all. We never do it with any of them. When you cut them back it takes the whole winter for them to recover. It is better to keep them right up and at it all the time and when they get up against the glass throw them out. This practice of drying off and cutting back was one cause of the abandonment of the old system of bed rose growing.

"We have a house of Mermets planted in a bed. The bed is six or seven inches deep, set right on the ground, with a foundation of rubble stone, so it is practically as good as a bench as far as drainage goes. We run these plants about three years, by which time they get too large and we then throw them out and replant."

"Do you get as good a midwinter crop as on benches?"

"Yes, I am sure we do. We get heavier wood than we possibly could on benches, and the flowers are fully as good. They are always in bloom and the bed which is now in its second year is turning us in two dollars to one as compared with the same space devoted to benches."

"We understand you are sending some remarkable Meteors to the Boston marker. How do you manage that rose?"

"Well, this is our first winter with the Meteor, but if we had foreseen what a success it was going to be with us we would have had half a dozen houses of it instead of one. They began to bloom about middle of August and have been in heavy crop ever since. The house is a sight now. You never saw a house of Jacqs more thickly set with buds. We can cut them with stems two feet and more in length. With such a rose as that I wouldn't think of attempting early

Jacqs. There is more money by considerable in the Meteor.

"We give the Meteor five to ten degrees more heat than the Mermet; if ten degrees, all the better. It is a strong feeder, wants plenty of light and should be grown well up to the glass. It has not troubled us in the least in opening the buds, and wherever it has shown a tendency to come slow and 'ball up,' I believe it is caused mainly by dampness, darkness, and allowing the temperature to run down. If it only had fragrance, though!"

"Are you growing many Jacqs this year?"

"Not as many as usual. We have only four houses, about 700 running feet altogether. Our Beauties have been very good right along. The only trouble is that we have not enough of them, and next winter we shall put in a great many more. One or two houses of such a rose are not much use to us. We get the trade started and then when we want them we are out of crop."

"What other roses are you growing?"

"More Brides than anything else. They are in grand condition. We have a fair quantity of Niphetos, a few Bennetts, Hostes and Albanys, besides a quantity of hybrids. The Bennett we handle much better than formerly. He throws fine buds, sells well, is not troubled with spotting and is hard to beat for dollars and cents.

"The Hoste does not take well in Boston. It is neither one color nor the other. Of course it is a good cropper and good grower, but it is necessary to have alternate houses of it as when out of crop it is out entirely.

"The Albany is all right for spring and summer use, but in midwinter when we want it most we can't do much with it."

"How do you account for the general superiority in size and quality of the roses grown at Waban Conservatories?"

"Well, general culture; little points which we watch that others are apt to think not worth attending to. We feed our roses well and watch them carefully and constantly. Keep your plants healthy and growing vigorously, that's the great point."

"Do you ship much of your stuff?"

"No, it all goes to Boston. We can sell there all we can raise."

Mines and Mining Building at the World's Fair.

The style of architecture of the mines building is classic, and its dimensions are 700x350 feet, the height to the main cornice is 65 feet. There is an entrance on each side of the building, the grand entrances being at the north and south end. These are 110 feet high and 32 feet wide, each opening into a vestibule 88 feet high and elaborately decorated. At each corner of the building there is a pavilion 68 feet square and 90 feet high, surmounted by a dome. A balcony 60 feet wide and 25 feet high encircles the building, and leading to it are eight stairways. The roof is of glass, 100 feet from the floor. The cost will be $350,000.

When writing to advertisers please mention the fact that you were induced to write by the advertisement in the American Florist. You will benefit us by letting advertisers know that it is the Florist that is bringing them trade.

When sending us small amounts in postage stamps, please select those of the 2-cent denomination.

Personal Recollections of Louis Menand.

III.

On the 30th of October, 1840, I started for Albany, following the track of my plant, my rara avis, or my phanerogyne as you please. For me these three appellations suit me. On the 31st of October I got fast bound in the chains of marriage. Then on the same day we left Albany on the steamboat, where, for the beginning of my honeymoon we had to separate—to divorce. There were no state rooms yet. Ladies stopped on the upper deck and men had to go down. When, in the morning we arrived at New York, Mr. Thorburn, my employer, was waiting for us, and taking both of us by the hands, and in a loud, thrilling voice, addressed me so: "Now my dear fellow!! you will have to stay at my house as I had proposed to you when you went, and you said you would not, and would go straight to Astoria. You may go if you please, but your house is burned to the ground," and he laughed. "It was burned before you were half way to Albany." I did not believe him; I thought he was joking. "Well," he said, "if you doubt, go and see it, but leave your bird here at my house. She will not fly out of the cage." So I started at once, and when I arrived I saw a nice heap of ashes on the site of the house. Everything had been burned except my bedstead, a table and a few other things. My bed room stood north and the fire had been *set* on the south with a north wind, so that a carpenter who had been building a greenhouse for us, and who knew I was in Albany, and living close by, when going to bed saw the house on fire and he ran at once for my room, broke the window, for the entrance of the house was already burned, and saved the few articles mentioned. The most important article was that table—a lucky table—in which I had $300 in gold in a purse. It had been thrown in a bed of roses, where I found it, the legs up. At once it struck me that the purse was gone for the drawer was not locked. I went to it, opened the drawer, and saw my purse with contents intact. I had had $500 in it, but had taken $200 to go to be "chained."

From November 1840 until March 1842 I continued to conduct Mr. Thorburn's business at Astoria. Then we parted and I came to Albany to try my chance as a florist and nurseryman. I located on the Albany and Troy road, on a modest scale—more than modest, i. e., *meagre*! Do you wish to have a slight idea of it? Well! before the year 1842 was over every cent of the five or six hundred dollars, or a little over, were gone, and in nine months, from March to December, business was so *prosperous* that during that lapse of time I received $17! We spent at least $100 a month. Had it not been for that Phanerogyne, that Egeria of mine, I would have had to bundle up, to bundle off, for climes more hospitable, but that diminutive (in appearance), that *rara avis*, that bird of mine, saved us from a complete wreck. Not only saved us, but upheld my courage, and when the rose buds or buds of any description, failed to open, she supplied them with *musical notes*!! Now! you will understand my love, my devotion, my veneration for that *personified providence*. She never flinched; her fortitude upheld her will! and in my eyes exiguity of her stature transfigured her as a "giantess!!"

However, the year 1843 began under a more auspicious sky. We had had hard times. From that day we went "pianissimo," but we never retrograded. Some "cryptogamic" ties held us, held us to our determination to swim or sink together, and we did so for fifty years. We swam in a lake of bliss!! That lake had become an ocean when a cyclone rent our blessedness! forever - - - - - . The years 1843, '44, '45 and '46 passed off with very little progress, except in the double line of propagation—in the vegetable and the animal kingdoms. But we had got possession of a better and cheaper location, 300 or 400 yards from where we were, we had purchased four acres of land, built a house, etc., where we moved on the 1st of April, 1847. We were proprietors (in parte) and we were on the way to improvement. Plenty of elbow room to apply my device "Help thyself and God will help thee," and I was cheerfully willing to put the theory into practice—to work, work more and to pray together. As I have said above, our double line of propagation required more energy on my part, as my helpmate could not much longer substitute musical notes for the missing rose buds. I could sufficiently (with elbow and brain oil) do it myself.

At that juncture a slight fever broke out among the community of Albany and Troy for hardy perennial plants, and as I had a fair collection I did well; for three or four years, in the spring I was for a few weeks busy in putting up collections of 6 or 12 or more; also a few shrubs. When that fever subsided the fever for conifers, arbor vitæs and Norway spruces, balsam firs, etc., took its place, but with better remuneration ten fold, and the fever lasted longer, and in after years I had specimens of Siberian arbor vitæs for my own gratification that I sold for $20 each; of smaller ones I sold more than I could grow, for $2 and $2.50, including planting and warranting to live; if they did not live I replaced, or no pay! It was at that time I began to hear that often silly expression: "It won't pay to warrant trees to live." I have done it for 25 years or more and it has always paid me handsomely. And yet I had to compete with parties who sold as good looking trees as mine for 75 cents and $1 when I asked $2 and over. I transplanted our trees every other year when not every year. I followed the same practice for dwarf pear trees, then so popular. I think I have said somewhere that I had no faculty for learning arithmetic, yet I have always understood that the straight line was the shortest in geometry as in commercial transactions.

The above digressions have made me forget our propagations, which were going "crescendo" in both lines. Then horticulture was progressing forward—not backward as I have seen in many instances on the fallacious pretext that it "did not pay." Then you could sell New Holland and Cape of Good Hope plants, etc., that nobody wants to-day. I think I shall do well not to follow the thread of my digressions on that subject when the "Chrysanthomania" is at the apogee of its paroxysm. Fifty years ago the camellia swayed the horticultural world as the chrysanthemum does to-day. Everything has to undergo the vicissitudes of life, "Hodie mihi, cras tibi," to-day to me to-morrow to you. Among the various epidemics on plants we have had in succession are the "Morus multicaulis," "Chinese Yam" (dioscorea), fuchsia, coleus, Pelargonium zonale and P. inquinans, Vulgo geranium (horse shoe—geraniums), which by the way are *not* geraniums, notwithstanding the popularity of the name adopted by the whole community. We must confess that noth-

MINES AND MINING BUILDING FOR THE WORLD'S COLUMBIAN EXPOSITION AT CHICAGO IN 1893.

ing has equalled *the rose*! which has survived and thrown into oblivion all her contemporaries. Roses were in demand 50, 60, 100 years ago. Not so much as to-day however. Now they seem to be as necessary as bread itself! I wonder if they shall ever have their decadence? Do not be afraid. I only ask the question. It is not probable that the rose will ever be supplanted by any other flower—unless - . God knows! we don't! One thing I know just this moment. It is that I am sketching my life!!??. I hope it will be considered so! But I can not refrain from making digressions—right or wrong.

Well, I can not stop here, I must continue my wanderings and reflections. I think we are about the year 1850 or 1852; really I forget, but one year more or less will not make me one day older, even if I commit some anachronism, as long as what I relate is correct, and I earnestly mean to do so, or my quotation about straight and "short line" would be a fiction, a blunder, a falsehood. On second thought I think that what I am to tell happened in 1852 (but I am not certain and I have no documents to confirm my doubts), an attempt to revive the New York Horticultural Society, which had been founded several years before, (from what I had learned from

Dr. Torrey, who certainly told me the year, but after more than half a century I forget) by having an exhibition. Messrs. Hogg, florists at Yorkville, hinted to me something about it and said, "when we have it we expect your presence, you can be represented. We understand you have materials for." I replied jocosely, "I shall not do such things. I would be afraid of distancing you in the contest and that might check the growth of our friendship." Time passed away and I had forgotten the incident, when one day I received a formal invitation to attend the exhibition. I did not intend to do it, but when the day came, my wife—No! my *Phanerogyne*—this name suits me; it is more sympathetic, more euphonic to me. Because it is Greek and of your own coining, you will say. No! it is not that. Mother and father are not entirely Greek and yet I somewhat like these expressions better than the equivalents of my maternal tongue, Mere and Pere. It seems to me there is more sentiment in the English my mother! my father! are so full of euphony, of fluidity from the heart! I hope you will absolve me once more for that overstretched parenthesis. It was necessary to let you know my feelings! My Phanerogyne I was saying, was with me when Messrs. Hogg hinted to me the possibility of an exhibition and heard my jocose answer. She asked me are you not going to that exhibition? I answered no, I have too much to do, besides I have nothing in bloom, and no foliage plants—as to-day, no palms. "Well," said she, "if you do not go they will say that you are a vain boaster, with your fears of distancing them, etc. You ought to go. If it is only for my sake, do go!" I answered "well I will, but without plants." "But it is precisely the plants which must go. They can do without you, but they want to see your plants." "Well, to please you I will try." So I went to look over my stock, which was not quite so large as that of Messrs. Pitcher & Manda to-day. I had only several Ixora coccinea in bloom and one Euphorbia splendens. I forget what were the other plants. I wanted six. I took two ixoras—if not three. At that time I had never seen an exhibition, but I was reading the *Gardeners' Chronicle* and I knew the theory of the arrangements for exhibitions, and my *two* or *three* ixoras forbode me of being disqualified from competition. I knew that the plants were to be dissimilar. However, I took the first prize for 6 plants—the prize of honor—notwithstanding the duplicate ixoras, but they were fine and had never been seen in New York. So I at once became a hero! Not one of Homer's heroes, though I drank water with my wine as they did; that was my only affinity with them.

That exhibition was, according to what I heard at the time, the most remunerative they ever had in New York; but the receiver or treasurer forgot to give up the money received and ran away. And that "*Dutchman* from Albany," as I heard some people designating me, came back home covered with *platonic* laurels! But then, I could *fan* myself with - - - - I won't tell. If you are sagacious, as I suppose you are, you may guess at it.

As a bisextile year I am going to *leap* over to February 14, 1854, to receive a communication from a committee of gentlemen, lovers of horticulture, of Brooklyn, asking me to let them have a copy of the by-laws of our horticultural society of Albany, and soliciting also my co-operation toward organizing or reviving their horticultural society. The New York Horticultural Society was then in a state of *catalepsy*, that with time became a chronic disease, with intermissions of a quasi life, just enough to show it was not dead. I with enthusiasm sent them the documents wanted and the promise of my co-operation as far as I could, and as I was wont to, I made the remark that I wished them success, that they had materials for but that they must try to control the "*element gardener*" and prevent them from predominating their position, not let them transgress, trespass its limits. I then thought of a fair exhibition that took place in 1840, in Brooklyn, which never had an echo until May, 1854. From that year until 1861 all the exhibitions—two or three every year—were successful, partly thanks to the president, Mr. Degraw, a very liberal man, ready to put his hand in his pocket when the funds were short. It was at those exhibitions in Brooklyn that were seen the handsomest specimens of New Holland and Cape of Good Hope plants ever exhibited in America, besides many other plants such as Ixoras coccinea, javanica, Colei (white), etc. etc. I do not remember all, except some fine plants, much appreciated then, that would make people laugh to-day, not because they were inferior but because they were *old*! As far as I can remember I attended most, if not all, of those exhibitions from 1854 to 1861, when the secession war put an end to the society's life. It expired in the Academy of Music of Brooklyn. I have said that the breaking out of the war put an end to it; but even if it had not, there would have been a catastrophe. The "element" alluded to had transgressed, trespassed over the limits of sound judgment. First by passing a resolution that "foreign exhibitors" should not have the freight of their exhibits paid, even if the freight should cost more than all the prize money they might receive. Now, do you understand who were those foreign exhibitors? You do not! Well, those foreign intruders were your correspondent, the "sketcher" of the above bittersweet digressions, etc. Secundo: that fifth element had decided sub-rosa not to award any first premiums to that Albany intruder who durst accept money to pay his freight, a mere trifle of $35 or $45 or more at every exhibition. One point to their credit, they did not deny me the right to vote at the presidential election. You may possibly wish to know who gave me such information. Simply the president of the society and its other officers, who had warned me not to mind the "elements quaking," that everything should remain in the "statu quo" as before.

How Shall I Keep Tuberous Begonias over Winter?

A very simple operation, as easy a one as to keep a potato. When the tops drop off (of course you have been gradually drying them off) dry the tubers, place in boxes, cover with dry sand or moss to keep them from shrivelling; in large quantities together this is not necessary. Place them under greenhouse bench away from heat—40° is about the right temperature, not over 50°. They keep fully as well in any good cellar.

One lady writes us: "What is the matter with my tuberous begonias? They are done flowering and seem to be damping off." All the matter is they are ripening off. The tops are annual and *will* die off.

The time is now at hand to sow seed. Our best results have been obtained from seed sown between the dates of January 15 and February 15. The seedlings have a good start before the sun gets too hot and you have the tedious job of first transplanting done before the press of other work begins.

We sow entirely in flats filled to within one inch of the top with coarse siftings, anything that admits of perfect drainage and at the same time retains sufficient moisture. The other inch is filled with fine sifted soil thoroughly drenched with water, the seeds are then sown and a very little soil is sifted over them, just enough to hold them in place.

Formerly we used to cover with brown paper until the plants began to show themselves. This does very well but sometimes mildew appears under the paper, and if the soil gets too dry the paper is hard to be removed for watering.

We now use a covering of sphagnum. Select the longest fibers you can find, shake out all the small pieces and place a thin covering directly on the soil over the seeds. This seems to retain just the right degree of moisture and if they need watering it can be done directly on the moss and no fear of washing or disturbing the seeds.

As soon as the first plants appear remove the moss; a short time before removing we water, so as to have as little watering to do as possible before we prick them off as they are apt to be washed out when small.

We prick off as soon as we possibly can as they are very apt to damp off under any circumstances, and for reasons I cannot explain, we have them do it under all circumstances, but believe ventilation under the benches a great help, at least last season our houses were ventilated that way and we were not troubled in the least. We think dry fine sand and sulphur sifted over the young plants a good remedy.

After they are pricked out and started, they grow like weeds and are as easily handled as cabbages. F. J. MEECH.

Sweet Scented Begonias.

Replying to a recent query as to whether any of the tuberous begonias at present in commerce could be called fragrant, Messrs. F. J. Meech & Son, Charlevoix, Mich., write:

"We have had several single tuberous begonias that were sweet scented, especially among the yellows, but none that were marked enough to introduce as a distinct variety. In one house, where yellow predominated, the odor was quite strong and very agreeable.

"We are looking for a new race of sweet scented begonias by hybridizing our present varieties with the newly introduced species Begonia Baumanni, which if all that is said of it be true, is the most important addition we have had to this class of plants in years.

"Mr. V. Lemoine, who introduced it, says: 'It was introduced by seed sent by Dr. Sac from Cochahamba, in Bolivia, to M. E. A. Baumann, from whom Lemoine purchased the entire stock. The tubers are very large, attaining a weight of as much as 12 oz. The plant is of easy culture, the same as other tuberous begonias, the foliage, is large, fleshy and of a bright green. The flower stems are produced in profusion, one plant throwing up as many as twenty-five, and each carrying from three to six flowers, three to four inches in diameter. The male flowers are the largest and handsomest and are twice as numerous as the female flowers, which is directly opposite in the other species. The color is bright rose, the flowers are

very fragrant, two or three plants being sufficient to perfume a whole house. To sum up—it has all the qualifications of a popular flower. Size and beauty of flowers, excellent style of plant and flower stems, agreeable perfume and the probable service it will be in the production of a new race by hybridization.'"

Replying to the same query Mr. Thomas Griffin, Westbury Station, N. Y., writes: "The only really sweet scented begonia that has been sent out up to date, to my knowledge, is Begonia Baumanni, though I have several crosses from that variety, and my own seedlings, that I am looking forward to with a certain amount of interest."

Palm Notes.

The martinezias comprise a very handsome group of warm house palms, and were it not for the profusion of sharp spines with which the stems and leaves are armed, they would doubtless attract more attention from decorators, for though the members of this genus prefer warm treatment yet their foliage endures the exposure of house decoration very well. Perhaps the best known of the martinezias is M. caryotæfolia, a slender growing palm with light green pinnate leaves, the pinnæ of which are somewhat similar to those of Caryota urens, but more irregularly arranged, the pairs of pinnæ being grouped along the petiole instead of appearing at regular intervals.

M. Lindeniana is another fine representative of this genus, and of more recent introduction than the preceding, and has bright green leaves with more or less wedge-shaped pinnæ, the terminal pinna being usually much larger than the others. This makes a very handsome specimen in any size from a 6-inch pot up, and makes a very attractive addition to an exhibition collection, or will probably stand at least as much usage as a caryota.

The soil best suited for the martinezias is about equal proportions of peat and loam, or a larger portion of the latter if it be of rather light quality, and during the season of active growth an abundance of water is required.

Among the geonomas there are several handsome species to be had, and prominent among these is G. Schottiana, a slender growing palm of graceful outline and deserving to be better known.

The leaves of G. Schottiana are from three to four feet long, and divided into narrow pinnæ, the latter quite long and arching, and of dark green color.

Another good example is G. gracilis, a very pretty little palm when well grown, and one of the most extensively used in Europe for table work.

For the latter purpose, however, it is distanced in our markets by the well known Cocos Weddeliana, (to which it bears some resemblance) as the cocos will stand far more exposure without injury than any other dwarf palm.

Geonoma Seemanni is still another noteworthy member of this family, and may be classed among the newer species, though in cultivation for several years past.

It is of quite dwarf habit and much given to throwing out suckers from the base of the stem, after the manner of Rhapis flabelliformis. The leaves of G. Seemanni are broad and frequently bifid, though sometimes broadly pinnate, and when young are reddish bronze in color, changing to dark green. As a young plant G. Seemanni is decidedly attractive, but as it becomes older it sometimes becomes ill-shapen and can hardly be recommended as a large specimen.

Oncosperma Van Houtteanum is a comparatively rare palm, though not a new one, and was sometimes known as Areca nobilis, but easily distinguished from the true arecas by the fact of its bearing spines on the leafstalks.

Oncosperma or Nephrosperma Van Houtteanum as it has been variously called, is an exceedingly graceful palm with long pinnate leaves and reddish petioles, the pinnæ being closely arranged on the stem and quite pendent and in color dark green.

This palm requires a warm house to thrive and a well drained compost, for its root action is not specially vigorous and over-watering during the winter may do considerable injury. It is, however, worthy of a little extra care in cultivation, for when in healthy condition it is one of the handsomest palms with which I am acquainted.

The licualas too, include several fine palms, the most notable and also one of the rarest being the beautiful Licuala grandis, which has been figured and described in former numbers of the FLORIST.

LUCULIA GRATISSIMA.

Licuala horrida is very distinct from the one noted above, and has fan-shaped leaves that are deeply cleft into broad segments of dark green color.

The leafstalks of L. horrida are stout and spreading and armed with very coarse, strong spines, the latter being a decided objection to its use as a florist's palm, for so much extra care is needed in packing such a plant ready for decorating in order to prevent injury to surrounding plants as well as to its own foliage.

W. H. TAPLIN.

Luculia Gratissima.

A few trusses of this lovely flower and also a small plant of the same, exhibited at Horticultural Hall, Boston, last Saturday, by Mr. Geo. McWilliam, gardener to Mrs. J. W. Lasell, Whitinsville, Mass., were very much admired by all, especially did the ladies give it much attention, and of course wanted to know all about it, how to grow it, etc.

It will do very well in an ordinary greenhouse in the summer time when making its growth, but should be moved into a temperature of 55° to perfect its flowers. After it is done flowering the plant will not require so much water, but it must not get so dry as to injure the roots. Give it a little trimming in, if the plant is of any size, to keep it into good form, and keep it in the same temperature till the warm days in spring, when it can be again transferred into the ordinary greenhouse for the summer. In case the plant requires a larger pot the best time to shift it is when the young growth has started about an inch; care must be taken not to disturb the roots any more than necessary, and to shade from the bright sunshine. This treatment with an occasional sprinkling overhead with the syringe till growth has got fairly commenced, should keep the plant doing well. A turfy, fibry loam, one third leaf mold and sharp sand to make the compost porous, will do for the plant very well. When the roots have penetrated to the side of the pot weak liquid manure water once or twice a week will help to make stronger growth and finer heads of flowers. Mealy bug and thrip must be kept off the plant, but especially when the flower cymes begin to form; a good hoseing with the plant laid on the grass will drive them off for a time, but may have to be repeated occasionally.

The flowers are very fragrant, of a lovely shade of pink; it is one of the finest winter flowering plants any one can have, and should be better known and more of it grown in all greenhouse collections of plants. W. S.

December 15, '91.

Is the Violet Disease a Myth?

I have had an experience the past season which quite confirms my belief that the "violet disease," so called, does not exist. I firmly believe that this disease, scientifically speaking, does not exist, but comes as a result from either wrong treatment or some parasite, insect or something of that nature attacking the plants.

My violets are grown in cold frames, and last spring, as usual, I potted some of the runners, and as soon as they were well rooted planted them out in the cold frames.

Naturally I selected the better looking plants for this purpose. Afterwards a friend of mine asked me if I had any violets over, and if so, said he would be very glad to have them. I gave him those left over and he planted them in his cold frames. The result this fall is that my violets have had the so-called disease, the leaves are about all gone, no bloom and no promise of any later, while my friend's are blooming nicely, look vigorous and show no sign of any disease.

I have had very good luck in the past with my violets, and for years my frames have been in one place, but this year I was compelled to move them and I think the soil was quite different. I can account for my failure in no other way, than that the soil was not suitable. If you can give me any light on the subject it will be gratefully received. I think my experience shows that this disease is more than likely entirely due to improper treatment.

CH. D. WADSWORTH.

Plainfield, N. J.

WE HAVE ADDED two more new features to our forthcoming trade directory and reference book. They are lists of leading Park and Cemetery Superintendents of America. We believe that these lists will be a great convenience to the trade in many ways. We shall also give a list of Botanic Gardens in America.

THE time for receiving advs. for our new directory has been extended to January 10.

New York.

The retail florists all claim to have had the best Christmas trade they ever experienced. They worked all the night before and many of them all day Friday, and as they look back over the hard pull they wonder what would have been their condition had the weather been fine.

Worse weather could scarcely be imagined, but the stores were thronged with customers in spite of the drenching rain. The great bulk of the flowers was disposed of in loose collections of long stemmed blooms, and naturally the stuff had to be of good quality. Inferior quality flowers had a poor show, the only chance to get rid of them being the few basket orders which were occasionally secured. Most of the stores sold out pretty clean. Buying had been done with caution, partly on account of the weather, partly owing to past unpleasant experience, and the risk of carrying stock was left to the commission men and the growers.

On Christmas greens the trade was phenomenal. Evergreen trees were sold out clean everywhere and customers were running round at midnight buying anything they could find in the shape of a tree without regard to price. Holly, too, was sold in enormous quantities. The late arrivals of holly were of very extra quality covered with berries. The market was loaded as never before with imported mistletoe, much of it in a badly broken condition, some of it very nice, and as prices were reasonable more of it was sold than usual. Domestic mistletoe could not be disposed of at any price.

The commission men had in many instances the same old experience with their growers. On Tuesday and Wednesday there were plenty of customers whom they found it impossible to supply. Buyers who wanted goods by the hundred had to be satisfied with dozens, which were doled out to them pro rata. Large quantities of flowers could have been disposed of quickly at good reasonable prices, but the stuff was locked up in cellars and refrigerators and could not be touched except at guaranteed big prices. All the growers did not do this, but many of them did, and to-day they are regretting their foolishness, acknowledging their mistake and vowing they will never do it again. Those who stored their roses got terribly stuck. The quantity of roses that came in on Thursday and Friday was enormous. Those of good quality that were freshly cut went off at good prices, and there were none too many of such. Fancy roses, good selected, brought as high as $20 per 100 and probably averaged $15 all round. The salted stuff in all probability did not average over $6 per 100 and was not nearly all sold. Three days before it would have gone readily at $10 to $15. Colored roses sold better than white, Niphetos and Bride went very slowly. One of the best selling varieties was Gontier, American Beauty went rapidly at prices ranging from $1.50 for the best down to rubbish figures. Some of the Beauties coming to this market are about as near the ideal rose as possible, superb specimens. Some go to the other extreme, in fact approaching the ridiculous when they appear in the size and shape of a Gontier bud, with a big luxuriant three foot stem. Mermets showed the effects of the dark weather more than any other variety. Most of those received were badly off color. Violets held up well in price, and carnations, especially the colored ones, sold out well. Bulb stuff was not as badly overstocked as in former years. Narcissus, paper white, was the only dead stock. Good lily of the valley sold at $6, and some from Ernst Asmus which was of extraordinary size and quality brought considerably more. Roman hyacinths sold fairly well at $3 to $4 per 100. Harrisii lilies took a spurt and there were not nearly enough to meet the demand at 20 cents. There was some white lilac in market which brought from $2 to $2.50 per bunch.

On Saturday, the day following Christmas, trade was very light throughout the city, but as the weather continued stormy the cut was small and there was not much stuff to go to waste, although there was a somewhat risky stock of high priced American Beauties floating round.

The trustees of Columbia College at a recent meeting voted $25,000 towards the proposed Botanical Garden, payable as soon as the $250,000 called for by the act of incorporation has been raised. The garden will be fashioned on the plan of the great Kew Gardens and will be located at Bronx Park, which is one of the most beautiful and picturesque spots in the State of New York. The great Torrey herbarium, valued at $175,000, will in all probability be donated to the garden also.

Mr. J. M. Keller, at Bay Ridge, has a splendid lot of genistas. He makes a specialty of this plant and towards Easter his houses will be a sight worth seeing. The variety racemosa has entirely superseded the old canariensis. The plants are very round and compact, having received a good clipping every two weeks throughout the summer. Mr. Keller, like all the Bay Ridge growers, has a fine lot of azaleas also, of which some of the early varieties are already in bloom and sold rapidly for the holidays. He has got tired of the cut flower trade, and azaleas, genistas, palms and Harrisii lilies have taken the place of hybrid roses. Harrisii lilies have come into bloom exceedingly early this year for some unexplained reason, it being next to impossible to hold them back. One of the prettiest sights at Mr. Keller's is a lot of Euphorbia jacquiniæflora in flower. This ought to be grown much more generally for decorative work.

Jas. Weir & Sons have built two very fine new houses, 200 feet long, the past season. Here too azaleas and Harrisii lilies are specialties. In the palm house is a group of Pandanus utilis plants, 8 or 10 feet high. There is a house of callas in bloom which Mr. Weir claims pays him better than any other stock on the place. Outside of the houses is a tall post, on which is a big bell with rope attached. When you want to find the proprietor pull the string. This convenience will receive the hearty commendation of every one who has ever spent a precious half hour perambulating a big establishment in search of the proprietor.

The match game between the New York Florists' Bowling team and the Acme Bowling Club will take place on Thursday, January 7, at 8 p. m., at Jansen's alleys, 49th street and 7th avenue.

Robt. B. Young has been sick for two weeks, but is better and expects to be out soon.

Boston.

"A green Christmas." An average temperature of 60° for a week. Add to this the fact that it rained on Christmas and on the two preceding days in old fashioned April style, and the combination is not an attractive one for the grower or for the retailer. The growers did not like it. About a week beforehand there were a couple of cold days and the indications of wintry weather for the holidays were very promising.

The conditions were just right for the growers' plans, the dealers came down for a little while from their high perch, and it looked as if the old time days were with us once more.

"They're getting very civil now," said Lawrence Cotter. "Yes," said Tom Cox, "my hands are all covered with corns caused by their shaking hands with me."

And if the cold snap had continued there would undoubtedly have been a nice little famine on roses, and the rose growers would have flown high, very high. As it was roses of good quality were in short supply and holiday prices held up equal to recent years. The weather had a very injurious effect on roses of all kinds, but Mermets suffered particularly, not 10 per cent of the receipts of this variety being of good saleable quality, and those who had them in good shape could set their own figure.

It is not likely, however, that the severest of weather could have resulted in a short supply of carnations. The quantity grown around here this season is enormous, and the quality is superior to that of any previous years. The growers had been holding them back so that there was a very large stock in readiness for the market. Up till two days before Christmas they held them back and the retailers who had much funeral work to do were handicapped and had to resort to a liberal use of "California Japonicas" (syn. Milk Weed Balls) as a substitute. White carnations were most badly overstocked, especially on the 24th, but of colored ones there was also a full supply, including Grace Wilders, which did not maintain their customary lead in price over other varieties.

The same story would apply to violets, many more of these having been run into the market for Christmas than could be sold, so that the price went all to pieces and dealers could get all the violets they wanted day before Christmas at $1 per hundred. No doubt there were plenty of violets thrown away which might have been sold readily two weeks ago.

Bulbous stuff was the deadest stock of all. Lily of the valley was the only thing in this line that had any life or movement. Narcissus, paper white, were not wanted at any price, and tulips, the scarlet Due van Thol, fared almost as badly. Stevia came in by the bushel, and although there was a large quantity of it used, yet the unsold stock was large, and some of the unfortunate growers who could find no dumping ground for it were advised to buy a cow and feed it to her. Smilax, too, fared very badly and could not be sold at any price.

There was some unusually fine mignonette in the market, also double pink bouvardia, and among the novelties were the first arrivals of English primroses and freesia.

"Prices don't start out to suit us," said John Duane, as he sat alongside his box at the "Exchange" on the morning of the 24th. "No," said his neighbor, "you've got to offer them bargains this morning to move them." The general inclination among the box men, however, seemed to be to take matters philosophically, and the rose growers among them had nothing special to complain of, so they just piled their boxes against the wall and sat down to a table to a quiet game of "Pig," in which alluring occupation they found abundant consolation.

In the stores everything was rush and bustle, for in spite of the disagreeable weather customers thronged in thick and fast and the amount of trade done was tremendous. They did not have to look for customers for they came as fast as they could be attended to; they did not have to look for stock, for the growers paid their respects to them unsought, and the demeanor of the average dealer was that of unconcern as to whether such a thing as a grower existed or not. "Plenty of trade, plenty of stuff," remarked one of the dealers as he took a breathing spell, "and while carnations and stevia hold out there will be no trouble to fill orders."

The stock of unsold flowers in the retail stores must have been small, for they had with remarkable unanimity refrained from engaging stuff beforehand, and would take no risk, nor buy anything until they saw a certainty of disposing of it. They had their inning and they made the most of it, and when they finally got through they were a thoroughly tired out crowd and acknowledged they had had enough.

There was a good supply of plants such as Harrisii lilies, Chinese primroses, cyclamens, azaleas, Jerusalem cherries, etc., and they seemed to sell well. Holly was cleaned up entirely. The sale of it was greater than ever before. There was no American mistletoe offered and the English variety was handled to a greater extent than for some years. While much of it was badly broken up yet there was considerable of it in fine condition and it sold fairly well, although at lower prices than ever before. Holly wreaths and bunches of holly branches were quite an item in the trade of the flower stores.

The street fakirs for the time being had stored away their flower stands and abandoned the flower trade for the more lucrative one of selling "greens," or were giving their attention entirely to hawking the "Walking down Broadway" and other ingenious mechanical toys.

Calendars for 1892 are coming in with every mail. There will be no excuse for any one to forget dates next year. One of the handsomest of the calendars comes from Robt. C. Patterson, the enterprising Pittsburg florist.

There was a very interesting and instructive exhibition of dried botanical specimens recently at the rooms of the Appalachian Mountain Club. The collection of ferns was especially rich and many rare and curious forms were shown, some of the contributions having come from Alaska, Africa, New Zealand and other remote places.

Mr. H. H. Hunnewell has donated several very large and beautiful plants to the World's Columbian Exposition.

Philadelphia.

The clerk of the weather did not have snow enough to go round Dec. 24, so he sent rain, not the kind that "patters on the shingles" that Robert Craig sings about, but the variety that comes down in bucketfuls. Oh, how it did rain from early in the morning until about 3 p. m., when it stopped and finally cleared up about evening.

For the past week the weather has been bad for keeping flowers; it has been warm and close; at no time has the thermometer been below 40° and has ranged as high as 60°. Some of the stuff sent in for Christmas was in very bad shape, roses falling as they were being taken out of the boxes and as to colors it would puzzle our artists to describe some of them.

Here are the prices: Mermets, Brides, La France, Bennetts, Wabans, 20; Cusins, Hostes, Wattevilles, 15 to 18; Perles, Gontiers, Niphetos, Sunsets, 10 to 12; Brunners, Magnas, Laings, 65 to 75; American Beauties, 50; bouvardia, heliotrope, 2; carnations, 2½ to 4; Valley, 6; Romans and paper white, 4 to 5.

As to the volume of business it was about the same as last year. The retail orders were mostly for cut flowers, very few baskets being made up. The box of long stemmed flowers is now considered the proper thing, the basket having to take a back seat for a time at least.

There was a great demand for ferneries and small jardinieres and the stock of ferns to fill them was none too good. There has been a great sale for this class of stuff this fall; the growers could not get it in size to sell before it was ordered and had to go as it was. H. A. Dreer had an immense stock, larger than ever before, but all salable plants were gone before Christmas. Messrs. Craig and Ball were also sold out of all but maidenhair. A few weeks will soon fill the stocks up again, as there are plenty of youngsters coming on.

Charles T. Starr, of Avondale, a prominent carnation grower, who sent out Buttercup and several other good varieties, died Dec. 24.

We have heard several inquiries recently as to how valley should be kept over the summer for forcing the following fall. Is there not someone who has been successful and will relate his experience in the columns of the FLORIST?

Mr. Robert Craig is still very ill; he does not gain strength, but his physicians hope by perfect quiet and rest to bring him about in a short time.

Mr. Lonsdale's new pink carnation, "Grace Battles," is a beauty; everybody knows Grace Wilder and we feel sure that before long this new variety will attain even greater popularity. The flower is larger, the petals being broader, does not burst its calyx and has a good stiff stem; in color it is a shade lighter. Mr. Lonsdale has other very pretty seedlings, which although being better than many now on the market are not considered by him good enough to send out.

Chicago.

The Christmas trade in both flowers and holiday decorations was very good. There was more holly sold this season than ever before. The enormous stock which some of the dealers laid in and which some wiseacres predicted could only be sold, if at all, at a sacrifice was nevertheless disposed of at good prices. At 5 p. m. on Thursday scarcely a holly wreath could be found in Chicago and many a would be buyer had to content himself by buying a loose bunch.

In flowers the demand was lively. The stock on the whole was fairly plentiful, but every flower was cleaned out. The stock of roses was none too good. Of course there was a good deal of pickled stock, but not quite as much perhaps as in former seasons. Mermets and Brides were the two varieties the most plentiful. The wholesale men asked from $18 to $20 per hundred, which price was held firmly. It is doubtful if this stock, of which certainly at least 75% was poor grade, could have held the price if there hadn't been such a shortage in roses like Bons, Gontiers and Perles. Many of the dealers had booked orders for roses of this kind at $2 to $3 per dozen, but not being able to procure this class of roses had to substitute the higher priced sorts, which was not very profitable to the dealer.

Am. Beauties were very scarce in most stores and first class stock commanded fancy prices, but there was hardly a Beauty to be seen which deserved the name. But one grower brought in Christmas week a clip of 1,200 Beauties which averaged very fair.

Carnations were never seen more plentiful or of better quality than this Christmas, but every flower was disposed of at good prices. Violets as was expected were extremely scarce. They were eagerly sought after at the fancy price of $1 per bunch of twenty.

Of bulb stock the valley sold poorly. There was but a limited stock in the market grown from this season's pips with hardly any leaves. Roman hyacinths were not nearly as plentiful as in former seasons, nevertheless good stock brought only $4 per hundred at wholesale. Freesia was to be seen in small quantities and sold readily.

Work will soon be begun upon the greenhouses on the World's Fair grounds and Chief Thorpe begins to feel a little more at home. The houses will be eight in number, of which four will be 100x22 and four 100x26. As soon as these are complete the department will be ready to care for plants sent in, and will begin the work of propagating stock wanted in quantities and in exhibition condition in '93. Mr. Thorpe will take another trip soon in the interest of the Fair and expects to be present at the meeting of the Executive Committee of the Society of American Florists in Washington Jan. 12.

Much satisfaction is expressed in trade circles here over the appointment of Mr. J. T. Anthony on the Executive Committee of the S. A. F.

St. Louis.

The Christmas trade has been exceptionally good. The demand for high class stuff especially has exceeded the most sanguine expectations. The sale for lower grades was not so good, becoming brighter, however, when the supply of the better class became more limited. The demand for smilax, holly and mistletoe was somewhat above the general average, the quality of the two latter being better than usual. There has been a fair call for Roman hyacinths and paper white narcissus. Both were plentiful, the former especially having glutted the market.

The demand has been very great. Beauties are bringing from $12 to $18 per doz.; Mermets, La France and Albanys $4 to $5; yellows and whites from $2 to $3; Roman hyacinths $1 per doz., and violets 25c per bunch.

There is a rush of funeral work, taking of course a large quantity of white flowers, but the call for set work in general is less than usual, the orders being mostly for small pieces.

Kentias, arecas, latanias and azaleas have sold well.

Toronto.

Trade is pretty brisk just now in this village and to all appearances the florists are raking in a good harvest. A wholesale grower tells me that prices range about the same as last year, with the exception of Brides and Mermets. Christmas 1890 they were going at $15, this year $12. The volume of trade has been larger, immense quantities having been shipped to Montreal and other Canadian cities.

Weather the last two or three days has

been quite mild, very favorable for selling plants on the market. There has been a drizzling rain all to-day (the 24th), with the thermometer about 38°, but it does not seem to have diminished the usual crowds on the streets. One generally looks for the jingle of sleigh bells though at this season, the merry sound of which tends to put people into a spending mood.

Orchids have been in some demand among the upper ten; the demand is as yet rather uncertain and the supply limited. Somehow or other people seem to have a way of wanting these sort of things when there are none or very few to be had.

The executive committee of the Gardeners' and Florists' Club has work enough to keep them going for some time on hand, a motion passed at the last regular meeting ordering a revision of the constitution and by-laws; then there is the chrysanthemum show list for '92 to be prepared and sundry other business which needs serious attention. E.

OBITUARY.

CHARLES T. STARR, the well known carnation grower of Avondale, Pa., died December 24, of typhoid fever.

Mr. Starr was one of the first American growers to turn his attention to the improvement of the carnation and some of our most popular varieties were originated by him. Among these may be mentioned Century, Buttercup, Lady Emma, Golden Gate, J. R. Freeman, Field of Gold and Duke of Orange.

He was most conscientous in all his dealings and had the respect as well as the regard of all in the trade with whom he came in contact.

He was a member of the Society of American Florists and has always taken an active interest in its work.

ADVS. for the new directory can be received up to January 10.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

SITUATIONS, WANTS, FOR SALE

A RETROSPECT.

The year 1891 having passed into history with all its hopes and fears, its successes and reverses, it behooves us now, in bidding it a kind farewell, to devote a few moments to a retrospective glance.

The regular reader of the FLORIST has been kept well and promptly informed of the various happenings of the year "curious, diverting or valuable," and if he has been a careful reader (How could he be otherwise?) of these columns, a review of the incidents and the lessons of the year will be for him almost superfluous.

Still we will venture to remind him that there have been many things for which he should in common with the rest of us be thankful. If he be a Chicago man we would remind him that Chicago's cup has been filled to overflowing, for even as the year 1891 came in the great king of rascals, Neal, who had been bequeathed to her by New York, possibly in partial revenge for her loss of the World's Fair, went out, shook the dust of her streets from his feet and sloped to the westward.

Then the whole trade has cause for gratitude for the biggest Easter business ever experienced, for the appointment of John Thorpe as Chief of the Division of Floriculture, for the numerous weddings which it is to be hoped brought as much pleasure and satisfaction to the active participants as they did profit to the florists, and for the large number of big funerals too, on the principle that "everything is grist which comes to our mill."

The hail sufferers who were under the protection of the F. H. A. and the successful bowling teams have equal reason to be thankful for their good luck. The Nomenclature Committee and the F. P. A. should congratulate each other that they are not in the county jail for their attacks upon the innocent people who are too good for this world and *you* should be extremely grateful if you have not had a chrysanthemum named after you.

The great movements inaugurated in the course of the year just passed, the reforms proposed and the useful knowledge acquired have been of unusual extent and importance. The great carnation boom and organization of the American Carnation Society, the many grand floral exhibitions, private and otherwise, the growth of the great U. S. Nurseries, the birth of the Telegraph Delivery Association, the introduction of the FLORIST'S "Telephone," the intertwining of the Stars and Stripes and the Union Jack at Toronto, the development of phenomenal ten-pin experts in every section, are all indications of our rapid strides, not to mention Supt. Porter's astounding census statistics. And in this connection how pleasant it is to reflect that the millions on millions of money shown to be invested in the florist trade are so sub-divided and scattered over so much territory that none of us are likely to be called upon *a la* Russell Sage to disgorge in response to the demands of the wicked dynamiter.

Among the acquisitions of the year which have attracted particular notice are Canna "Star of '91," Rose "Waban" and the rediscovered Cattleya labiata.

We must not undervalue the mental advancement which must have accrued to the trade at large from Brother Chitty's memorable carnation tussle, the AMERICAN FLORIST'S great Easter number and the Hews-Whilldin Standard Flower Pot controversy; neither should we fail to express our satisfaction at the settlement for all time of the all-important question as to the eatableness of the calla root and the orchid, the identity of the Roehrs rose and the Crown of Thorns plant and at the rapid disappearance from our ranks of that old time incubus, the "gardener" who took care of the horses, did the chores and ate with the servants.

Take it all in all we have had a pretty good time in 1891, even if we have not yet succeeded in raising the blue rose and the blue chrysanthemum, in discovering the commission man who can give continuous and equal satisfaction to customers and consignors, establishing the proper equilibrium between fun and business at the S. A. F. conventions, agreeing with Mr. McMillan as to what constitutes a paradise, selecting a national flower or constructing a color chart; or hit upon a plan for inducing florist club members to express their opinion in the meeting instead of around the corner.

What of it if the humbugs and the fakirs and the "crape pullers" yet ply their trade; admitted that the violet disease continues to baffle us, that the chrysanthemum bug still revels and that the voice of the plant auctioneer is heard in the land; we have still got something to live for and let us not give up until we have seen the comparative value of steam and hot water heating settled, the comparative merits of Lamborn, Mrs. Fisher and Silver Spray demonstrated to everybody's satisfaction, the best method of marketing cut flowers agreed upon, the problem of porridge and tea or salad and something else at the conventions satisfactorily solved, New York's Botanic Garden in operation, the limit in size of chrysanthemum flowers reached and all of John Thorpe's predictions realized.

Good-bye, old 1891; you have done well for us, but there is plenty of work left for 1892.

STEPHANOTIS FLORIBUNDA FRUITING AT BUFFALO.—Mr. V. Hamann writes us: A large plant of stephanotis in the greenhouses of Mrs. G. H. Lewis is now bearing several good sized and nearly matured seed pods. And when the plant blooms again he hopes "to cross it with some other species of flowering plant," and asks "what for instance would make a good cross with this plant?" The fruiting of the stephanotis in greenhouses is not a very uncommon occurrence. So far as we know there are only two species of stephanotis in cultivation, namely, S. floribunda and S. Thouarsii and the latter is scarcely known in our greenhouses. Hybrids might be raised between these two species. But aside from this it is very questionable if any success could be attained. In the case of nearly allied genera, such as cattleya and lælia and sericographis and libonia, we have succeeded in getting bi-generic hybrids, but the instances are not many. The stephanotis belongs to the asclepiad family, in which also physianthus and hoya in the way of tropical vines common in greenhouses are included.

IN SPITE of our best efforts to do so we shall be unable to issue the new directory promptly on Jan. 1 as hoped. The great bulk of the list is already complete, but it has been even slower work than anticipated to get accurate information from certain places. We have been obliged to repeat requests several times and try again through different channels in many cases to secure the information wanted, and some towns seem to be entirely peopled with that class who never answer a letter. But we are getting there. If we can't make it one way, we try another, but this has taken up a great deal of time. In the compiling of this edition we have received some little assistance from postmasters in small places from which it has been in the past very difficult to get reliable information and when we do put the list on the press it will we believe be just as accurate as it can possibly be made. Certainly no former edition of the book was given the time, care and expense that has been given this one. Owing to the delay we can receive advs. for the book up to Jan. 10. If you have not already engaged space do so without delay. If you do not wish an adv. send in an order for the book. Price $2.

WE HAVE received a photograph of the chrysanthemum show at St. Louis and regret that owing to indistinctness in a vital part we are unable to reproduce same and present it to our readers.

SEND IN your directory adv. before January 10.

REMOVAL.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

W. A. R. MOREHOUSE is reported to have engaged with Jas. Vick's Sons.

MRS. A. C. NELLIS, wife of the well known seedsman, died at her residence on Staten Island December 10th.

THE well known case of Meggat vs. Breck was reported to have been settled, the defendant paying claim in full with interest.

AN INTEREST in *Vick's Magazine* has been bought by H. P. Hubbard. He is booming it by a personal canvas. The magazine has been increased in size as well as in circulation. Mr. Hubbard is an old time boomer.—*Adv. Gazette.*

News Notes.

CONCORD, N. H.—A. L. Shackford, florist, has failed.

CLEVELAND.—Mr. John Miller, gardener to Mr. W. J. Gordon, has purchased the greenhouses of Mr. J. C. Gooding, the latter retiring from business.

LONDON, ONT.—The Florists' and Gardeners' Club will enjoy its first annual supper January 4, at the Revere House. It promises to be a most enjoyable affair.

LITTLE ROCK, ARK.—The Little Rock Florists' Club will at the meeting on Jan. 8 elect officers for the ensuing year and discuss the question of a chrysanthemum show next November.

TOUGHKENAMON, PA.—Mr. J. C. Chambers, the carnation grower, has associated his brother, Mr. C. P. Chambers, with him, and the firm style of Chambers Bros. has been adopted.

SALEM, O.—Mr. J. E. Bonsall has associated his son, Le Roy T. Bonsall, with him in business, and the firm name of J. E. Bonsall & Son has been adopted. The firm will make the growing of smilax a specialty, having now over ¼ acre of smilax beds exclusive of walks.

DAVENPORT, IOWA.—The Davenport Florists' Club was organized Oct. 15 last with officers as follows: Wesley Green, Pres.; Theo. Nissen, Vice-Pres; J. T. Temple, Sec'y and Treas. The club gave a chrysanthemum show Nov. 24, 25 and 26 that was very successful, financially and otherwise.

NEW HAVEN, CONN.

Mammoth Verbena Seed.
NEW CROP NOW READY. Choicest mixed varieties in the brightest colors. Per trade packet, 50 cts; 1-4 ounce, $1.00; per ounce, $4.00.
The strain we offer this year is far ahead of that sold last season with such satisfactory results. Only the richest colors have been retained, and the largest flowers selected for seed. Seedling plants are now preferred by the leading florists for spring sales because of their vigor and freedom from rust. With this strain to depend on there can be no doubt about the success.
DREER'S DOUBLE HYBRIDIZED PETUNIA SEED, so well known to the trade for the past 10 years, constantly improving by judicious hybridizing. Trade pkt. containing 700 seeds $1; small paper 15c.
DREER'S SINGLE GRANDIFLORA MOTTLED AND STRIPED PETUNIA. This strain will give splendid results in pot culture, as well as open ground. It is rich in colors and markings, and of largest size. ¼ ounce, $2 50; trade packet, 75 cts.
Cobea Scandens per oz. $.75 Centaurea Candidissima, per oz. $2; per 1000 seeds, 50c.
Smilax Seed, per lb. $8 " .60 Gymnocarpa, " 50c. " " 30c.
☞ Preliminary flower seed list to the trade of seasonable seeds now ready; mailed free to the trade.

WHY You Should Grow Mushrooms.
Because they are the most profitable crop for the outlay that can be grown and may be grown without interfering with other crops. The market is sure, the supply never having been equal to demand.

WHEN You Should Grow Mushrooms.
During the Winter and Spring months, the first planting in August or September with successional planting until April.

WHERE You Should Grow Mushrooms.
Under the greenhouse benches, on the greenhouse benches among growing crops, in Rose Houses, in frames in the greenhouse, in cellars, stables or outhouses, in the open field or in mushroom houses.

HOW You Should Grow Mushrooms.

First get spawn that will grow. It must be fresh, well spawned, and in good condition. **Gardiner's Celebrated English Mushroom Spawn** is the best, and is always fresh and reliable. The details of culture are given concisely in our treatise, **"Mushrooms for the Million,"** Mailed free. **Falconer's "Mushrooms and How to Grow Them."** Published at $1.50. (Gardiner's price $1 35 post free.) **Robinson's "Mushroom Culture,"** 50 cts. postpaid.

GARDINER'S ENGLISH MUSHROOM SPAWN.

John Gardiner & Co., have made a specialty of choice spawn for years, and their celebrated English brand (made by the best maker in England, specially for their trade), has gained an enviable reputation among critical growers for its uniform good quality, and can be thoroughly relied on to produce a good crop of the best mushrooms. Orders booked now for delivery as wanted, $8.00 per 100 lbs. Special rates to large growers. Address all correspondence to **21 North Thirteenth Street,** Philadelphia, Pa.

Saddle River, N. J.

Chrysanthemum Shows.

Your correspondent gave a very successful chrysanthemum show this season, single handed, having no florist club to help him out, and I think no town having at least one wide awake florist should be without these fall shows. It is an A No. 1 advertisement for the florist who will get it up, it creates a demand for his goods and can be made very profitable if well handled.

Wishing to map out another show for '92 would like through the FLORIST to exchange plans for conducting similar shows with those who have had experience, as ideas collected from a number of plans might be of great benefit. F. F.

ONE WM. LAUF, something over 5 feet tall, fair, somewhat stout, speaking both English and German and according to his story from Frankfort-on-the-Main, is reported to have been guilty of uncommercial transactions in Brooklyn, Chicago and Milwaukee. It is further stated that Milwaukee parties are anxiously looking for him and that H. E., Box 87, Milwaukee, Wis., particularly desires to know his whereabouts.

THE Astoria Nurseries, Astoria, N. Y., have been rented by J. A. Wilson, who has been foreman of these nurseries for the last two years, and L. G. Forbes, foreman for W. P. Wight, Madison, N. J. The business will be conducted under the firm name of Forbes & Wilson.

YOU still have until January 10 to get an adv. in the American Florist Co.'s new trade directory and reference book.

STOCK PLANTS OF

CHRYSANTHEMUMS.

JESSICA once more to the front. Those that had it, wished they had grown more. Those that had none, wished they had it.

NOW IS THE TIME TO ORDER STOCK PLANTS.

We offer Stock Plants of Jessica, 25c. each; Rohallion, the grand new early yellow, 25c.; Mrs Gerard, the earliest large pink, 25c. The best flowers of this variety wholesaled at 50c. each in the New York market.

These three varieties have now flowered and are ready for shipment. All other commercial varieties on hand and ready as soon as flowers are cut.

Orders filled in rotation. Do not delay ordering if you want these varieties as stock is limited.

CLEMATIS, fine, well grown plants in choice assortment. Plenty of Jackmanii. Prices very low, on application.
F. A. BALLER, BLOOMINGTON, ILL.

Foreign Notes.

NEW ENGLISH PUBLICATION.—Garden Craft, Old and New. By the late John D. Sedding.

THE DOOR RECEIPTS of the Edinburgh chrysanthemum show were nearly $5,000, about $250 more than last year.

THE Royal Netherlands Horticultural Society held the second national chrysanthemum exhibition at Amsterdam Nov. 12 to 16. There were 109 entries.

CHRYSANTHEMUM SHOWS were as numerous as ever in England during the season just past and the chrysanthemum seems to be getting an even firmer grip on popular fancy than ever before.

WOOD WORK in an Austrian salt mine is said to be in an excellent state of preservation after standing several centuries and the case is cited as evidence of the preservation of wood by salt solutions.

A NEW VERBENA introduced by an Erfurt firm bears the delightful name of Verbena hybrida erecta compacta atrosauguinea. If the plant comes honestly by all these titles no description is necessary.

THE annual dinner of the National Chrysanthemum Society of England took place Dec. 1, with about 120 present. The tables were profusely decorated with chrysanthemums and the various toasts were eloquently responded to.

A NEW PRIMULA DISEASE called the primrose mildew has been determined by the scientific committee of the Royal Hort. Society of England to be a fungus bearing the title Ramularia primulæ, Thum. The species is new to Great Britain.

THE chrysanthemum show of the National Horticultural Society of France, at Paris Nov. 19 to 23, was extremely interesting. The principal exhibits came from the north and the south of France and were widely dissimilar. Those of the north were remarkable for their size, some of them being 8 inches in diameter, or as large as an ordinary sunflower, while those from the south were mostly small varieties and were noticeable for curious combinations of delicate colors and eccentric shapes. Some were hardly larger than immortelles.

J. Horace McFarland Company.

INCORPORATED 1891.

How does that look? It means that I have got to say "we" now, because there are more of "us"; but I'm in good company, I believe! Well, then, "we" are bigger than J. H. McF. all by himself, and we've enlarged, increased and extended his facilities for doing the right sort of printing for florists and the other plant and tree people. A fine new electrotyping outfit and a lot of other new machinery will help the Company to keep J. H. McF. hustling after work, and doing it! The florists are responsible for this move, and they want to notice that we're ready to do Catalogues in great shape at the Mount Pleasant Printery, and do them on time. Write to

J. HORACE McFARLAND COMPANY, Harrisburg, Pa.

[*P. S. by J. H. McF.*—The "we" will go better after a bit. Just notice that I'm right "in it" yet, at the same old stand, and the others are helping me to do better for all of us, and you!]

Publishers AMERICAN FLORIST.

When you write to any of the advertisers in this paper please say that you saw the advertisement in the AMERICAN FLORIST.

A FEW POINTS ABOUT OUR NEW DIRECTORY.

POINT 1.—The new book will contain an accurate list of those in the trade on the Continent of North America, January 1, 1892.

POINT 2.—In addition to the above it will contain the statistics of the Florist, Nursery and Seed Trades from the last census.

POINT 3.—It will also contain a complete list of all National and Local Trade Organizations, with just the information about each that you want to have convenient for reference.

POINT 4.—It will contain an alphabetical list of Roses, up to date, and whose accuracy as to spelling of names, class, date of introduction, etc., you can depend upon.

POINT 5.—It will contain a similar list of Chrysanthemums, also up to date. One that can be relied upon as authoritative.

POINT 6.—It will contain a similar list of Carnations.

PRICE ONLY $2.00.

? Can you afford to be without this book? We don't believe you can.

No More Leaky Sky Lights

Or Slipping and Breaking of Glass in Green Houses or Farmer's Sash. You can save money and glass by using the

PATENT GLAZIER Twin Points.

THESE POINTS are far superior to the old mode of setting glass, as they will hold each pane in place, preventing the glass from slipping and causing binding and cracking. Each box contains 500 rights and 500 lefts. We also make a tool for driving the points. **Price, 35c a Box. Driver, 15c. A Liberal Discount to the Trade.**

These points are kept by all prominent Hardware, Paint, Oil, Seedsmen, and Florist Supply Stores in the country. If you do not find them, send postal for a free sample, or send 69 cents for 1 package and 1 driver by mail, post paid to any part of the U. S.

H. W. EAMES CO., Milford, Mass.,

Mention the AMERICAN FLORIST when writing advertisers on this page.

"Amalgamated Roses."

Is there an epidemic of nonsense about to overwhelm the country? If not how can the following from the New York *World* be accounted for?

A Broadway florist showed a *World* reporter yesterday a new rose which after many experiments, occupying several months of time, he has at last brought to perfection, and it is certainly a wonderful production. The flower is perfectly dividedly perpendicularly, one-half being a beautiful pearl white and the other half a delicate bluish pink.

This strange blending of colors has been produced by the close study of flower life. The pink half comes from the Mermaid rose—father or mother as the case may be—and the pearl white half is derived from the Bride rose. This rose will not be in the public market for many months to come, as there is as yet only one plant of this new species, and the flower shown is the first ever produced. This will no doubt prove a novelty and be in great demand as soon as the grower is able to produce them in quantities.

How the cross was effected is kept secret by the grower that business rivals may not profit from his labor.

Shades of Ananias and Sapphira!

And under the heading of "A New Flower" the New York *Record* breaks forth as follows:

The latest flower this season is called the "Cosmos," a delicate blossom with white petals and a yellow centre, the whole resembling very much the daisy, only it is nearly twice as large as the largest of this white soul of the meadows.

The Cosmos has been brought to its present state of perfection by a West Broadway florist, who has united the daisy with the blood-root flower and by a series of grafting has produced a most beautiful plant, which takes the place of ferns to a wide extent in trimming up baskets. The Cosmos keeps fresh for a long time and looks like a cross between a dogwood blossom and a daisy. It is not affected by cold or heat nor the stuffy atmosphere of overpeopled rooms. Just why this flower should have been called the Cosmos is not clear.

This is about the rankest thing we have struck yet.

PLANTÆ CULTERATÆ EXSICCATÆ is a new publication announced by the Orcutt Seed and Plant Co., of San Diego, California, and of which the first fascicle will probably be issued early in the spring.

You still have ten days in which to get your adv. in our new directory. Mail order and copy at once.

THE Florists' Club of California, composed mainly of San Francisco florists, is trying some interesting experiments. At the last meeting it adopted a resolution calling upon growers to sell their product to members of the club only, and it was also resolved that after June 1, 1892, florists who are members of the club shall buy only from growers who are members of the club, any member violating the rule to be subject to suspension from the club. It was also decided to publish a statement in the daily papers requesting people not to give their funeral orders to solicitors, but to patronize the stores only.

A PHOTOGRAPH of a new style gates ajar has been sent us by Mr. F. C. Haupt, Louisville, Ky. The arch is in the form so much affected by the Japanese and at the apex assumes the shape given to the top of the trinity cross.

ANOTHER installment of Mr. Menand's recollections will appear in next issue.

Something About Orchids

BY RICHARD GARDNER.

[Extracts from paper read before the Newport Horticultural Society.]

The culture of orchids in general is too long a subject for me to undertake, so I shall speak of only a few—those which I call the most useful and with which I am best acquainted.

I think the cattleya ranks first, and among the varieties of C. Trianæ are some of the most useful and beautiful. The flowering season is from January to April, and the flowers will last three weeks in perfection if kept in a cool dry house. There are over 40 varieties of this cattleya, each supposed to be somewhat different in color or markings.

They grow either in pots, or in baskets suspended from the roof. I prefer baskets on account of bringing them near the light. When grown in pots the pots should be half filled with broken pots or pieces of brick and charcoal, covered with a layer of sphagnum moss. For potting I use fern roots chopped up with a little sphagnum moss and small pieces of charcoal. The plant is elevated above the pot keeping the eyes well above the surface. Baskets will not need so much drainage. The best time for potting and top dressing is just before the plants make their growth, so that the young roots may work into the new material.

When growing they require to be kept moist, and plenty of water should be thrown between the pots and on the floor of the house in order to maintain a moist atmosphere, the temperature being kept at from 70° to 75°.

When they have made their growth they should be allowed to go to rest, giving only enough water to keep them from shrivelling. The temperature should not be allowed to drop below 60° and they should have plenty of light, only a thin shade is needed. Plenty of ventilation should be given, but avoid cold draughts.

White scale and yellow thrips are the worst enemies of the cattleyas. Tobacco smoke is the best remedy for thrips and continual spraying will keep down the scale.

Cattleya Percivalliana is a very beautiful winter flowering cattleya. The flowering season is in January and February and it requires the same treatment as C. Trianæ.

Cattleya Mossiæ is a grand free flowering species, one of the oldest and most widely known cattleyas. There are over thirty varieties. They flower from March to August and require the same treatment as given for C. Trianæ.

Next in order come the lælias. They are nearly allied to the cattleyas and in fact cross readily with the species of that genus. The lælias are among the most useful of orchids, being robust growers and producing their beautiful flowers in profusion. Some of the flowers are as much as eight inches across. There are about 30 varieties of Lælia purpurata. Treatment is the same as given for the cattleyas mentioned.

Most of the calanthes are terrestrial. Calanthe Veitchii and the varieties of C. vestita are in my estimation the best of the genus. I am better acquainted with them than with any other orchid as I have grown them for 13 years.

They are deciduous—which is rather a disadvantage—and the flowers are not so gorgeous as the cattleyas and lælias, but coming into flower late in the fall, when flowers are scarce, their long spikes of showy flowers are most useful.

The flower spikes of C. Veitchii come from the base of the new bulb. Good, strong bulbs will send up a spike between three and four feet high, gracefully arching and bearing from 30 to 40 rich rose-colored flowers about two inches across. The Christmas of 1890 I remember counting 30 fully expanded flowers on one spike; a few had fallen off and there were several yet to come.

Calanthe vestita and its varieties are very beautiful. The flower spikes are more arching than those of Veitchii, and the flowers are creamy white, with a blotch of rich crimson in the center of the lip of C. vestita rubro-oculata, and a yellow blotch in that of C. v. luteo-oculata.

There are several hybrids of merit. I have raised one myself. I exhibited it at the 1890 chrysanthemum show of the Massachusetts Horticultural Society and was awarded a silver medal. It is a cross between C. Veitchii and C. vestita rubro-oculata. The flowers are much like those of the last named, which is the seed parent. They are pure white with a crimson eye whereas the parent is a creamy white. The individual flowers are larger than in either parent and of better substance. It is also a vigorous grower and easily increased.

Calanthe vestita and varieties require a temperature of 70° when growing, with plenty of moisture in the house. They are terrestrial orchids and thrive best in pots. The potting material I use is two parts turfy loam that has been in a pile long enough to kill the grass roots (I shake out some of the earth and save the rough, fibrous pieces), one part horse droppings or old mushroom bed, the remaining part being made up of broken pots, charcoal broken small, sphagnum moss and a little sand mixed well to-

gether. It is best to use clean pots. They require plenty of drainage; for a 6-inch pot I use two inches of broken pots for drainage.

They begin to make their growth the latter part of March or the beginning of April, and as soon as the young growths are an inch long the young and tender roots begin to shoot downwards. They should be potted at this stage. If delayed for even a few days the roots will have grown so much that they are sure to get broken in potting. When potting I fill the pot up level with the potting material, then place the bulbs on and pack more of it around them to keep them upright, finishing up with fresh sphagnum moss. I then give them a good watering with a rose watering pot. While they are wet I press the sphagnum firmly around them, taking care not to bruise or bury the young growths. They need careful watering at first, as too much water is apt to rot the young growths. I give just enough to keep the sphagnum moss alive. When they have become well established they will take plenty of water, providing the drainage is all right, and when growing weak manure water once a week is a great help to them.

When the bulbs are full grown they begin to lose their leaves and the flower spikes make their appearance. Water must now be given more sparingly and when the flowers begin to open be withheld altogether and the house kept as dry as possible.

After the flowers are cut I shake out the bulbs, put them in boxes and place them on a shelf in the same house, being careful to see that they are out of the way of drip, where during the winter the thermometer does not go below 55°.

I will now pass on to the odontoglossum. There are over 100 species of this popular orchid and many of them are very beautiful. Odontoglossum crispum (Alexandræ) and its varieties are probably the most useful. The flower scape is arched, sometimes branched, strong plants producing as many as 20 flowers on a scape.

Odontoglossums require a cool house and a moist atmosphere all the year round. They thrive best in pots, in fibrous peat, chopped sphagnum moss and white sand.

The cypripedium comes next. To my way of thinking many of the species are more curious than beautiful. C. caudatum is probably the most curious. Most of the cypripedium flowers lack that brilliancy of color that makes the cattleya so attractive. Still a great many are useful as cut flowers and they last in perfection several weeks. They are found in all parts of the world. Some come from Canada and Siberia while others come from India and South America. The treatment is varied and I shall leave their culture for some one else to handle.

I have tried to tell you something about the culture of several members of the orchid family, but their usefulness as cut flowers is what I wish particularly to call your attention. In my opinion no flower is so suitable for dinner table decoration as some of the orchids, not even the rose, the "Queen of flowers." For a center piece a basket filled with maidenhair fern among which a dozen cattleya or lælia flowers have been carelessly placed, is simple, effective and very beautiful, the graceful ferns showing off to advantage the gorgeous and elegant orchid flowers. In making up orchid flowers should never be crowded. I like to see them placed so as to show plenty of fern between the flowers, the colors being so rich it requires considerable green to tone down the whole.

It is hard to find anything among flowers more beautiful than a vase filled with odontoglossums, such as crispum, Pescatorei and cirrhosum, with sprays of Asparagus plumosus nanus. The feathery asparagus goes well with the lovely orchid flowers. Orchids can be used in almost every case where cut flowers are called for.

I have heard some people say that orchids look like a lot of old dried sticks, and some of them are rather hard looking citizens during the resting season, but in my opinion no more so than a bed of hybrid perpetual roses during nine months out of the twelve.

The orchids I have named are now no more expensive than many other plants. Prices are really very reasonable except for very scarce species or for hybrids. A year and a half ago I bought a plant of Cattleya Percivaliana for $10.50 and in January last it bore 24 flowers worth 50 cents each at wholesale, or $12 for the 24 flowers. At the same time I bought a Cattleya Mossiæ for $9.50. Last summer it also bore 24 flowers well worth 50 cents each. Each of these plants took up about 18 square inches of bench room, but as they were suspended from the roof above the walk they really take no bench space at all and they do not interfere with the plants on the benches. Any one who has a house devoted to stove plants such as crotons and draceenas can also have a few orchids as some of them do well in such a house.

Some of the orchids have no fragrance while others emit very sweet odors. Cattleya Trianæ Schroederæ has a fragrance exactly like that of the hawthorne. Another variety of C. Trianæ has the same fragrance as the genista. Odontoglossum citrosmum should be lemon scented but a plant that bloomed with me filled the whole house with a strong perfume of tulips.

Cypripedium Spicerianum.

This is a charming orchid and when well grown is always a source of interest when in bloom on account of its pleasing character and durability. Not many years since it was exceedingly valuable, but fortunately its habitat has been rediscovered and it has now found a home in many collections. At Pittsfield, Mass., in Col. Cutting's collection there is a fine show of well grown specimen plants, bearing a profusion of large bold blossoms. Mr. Meredith, the gardener, discards the use of peat, giving them pure sphagnum moss only and with ample drainage. The health and vigor of the plants leave nothing to be desired, and they appear to thoroughly enjoy this treatment. Among other plants in bloom were several fine examples of C. cardinale, a well grown specimen of C. leucorhodum, C. vexillarium, C. grande, a superb form of C. Leeanum, with a dark shining pouch and a well grown specimen of C. Chantinii. The whole formed a very interesting group and were well worthy of a visit.

A. DIMMOCK.

Dion Spinulosum.

Dion spinulosum, illustrated in this issue, so named by Mr. Wm. T. Thistleton Dyer, Director of the Botanic Gardens, Kew, is a cycad from Mexico. Some years ago a number of these plants were sent to Elliott's auction rooms. No bid being obtained for them they were, after fair warning, sold for a nominal price to Wm. Wilson, Astoria, where we found them.

The FLORIST, we think, can claim the credit of first illustrating this beautiful cycad.

As to culture, it can be grown well in a small pot in a cool house. *Never overpot it.* We think it destined to be very popular as a decorative plant. We obtained seeds from Victor Fournier, City of Mexico, two years ago and the plants are now two feet high. This plant is not mentioned in Nicholson's "Dictionary of Gardening." Without being so informed we think the first plants at Kew of D. Spinulosum were those sent from the Botanic Garden at Washington. A plant about the size of the one illustrated was in Mr. Tilden's conservatory just before his death. If we mistake not we saw the same plant at Pitcher & Manda's a few weeks ago.

Your reproduction of photos in the FLORIST is wonderful. Such object lessons! Well, it is a pity they should be confined to the trade! The rich green color is all that is wanting to make the picture complete.

WM. R. SMITH.

U. S. Botanic Garden, Washington, D. C.

Long Island Notes.

BY WM. FALCONER.

RUELLIA MACRANTHA.—From cuttings last spring and grown on in pots till they now are in 6-inch ones, they are nice plants 18 inches high and in full bloom in the carnation house. Cut back one-year olds, last spring, planted out in summer and lifted and potted in early fall are large bushy plants, but not yet in bloom.

VARIEGATED CAREX.—A small narrow leaved white variegated evergreen carex came to us from North Easton last summer, and it promises to be a very desirable little gem for greenhouse decoration. As an edging as we use isolepis, for wall work, ferneries or studding with mosses and small ferns for table work, it suggests a promising future.

DOUBLE FLOWERED CYCLAMENS.—At Mr. Brown's at Flatbush I saw some very handsome ones the other day. In habit, vigor and all other ways except in the doubling of their flowers the plants are the same as the single flowered ones of the giganteum type. The doubling gives the blossoms a bunch or bouquet appearance, but in my opinion it does not add any refinement or beauty to the variety.

TORENIA FOURNIERI is an annual little plant of much beauty, and now common in seed lists. As an outdoor plant it blooms continuously all summer long. Mr. Gus Bennett has a lot of it now in bloom in the greenhouses planted along the edges of the rose benches to give the house a dressy appearance. He also has it in bloom in pots, and it is a charming little plant in either case. The white flowering variety White Wings is as easy to grow and bloom as is the blue one.

LIBONIA PENRHOSIENSIS makes a beautiful little pot plant; just now it is a ball of red and yellow flowers. For cut flowers, however, it is worthless as the blossoms will so quick.

SERICOGRAPHIS (JACOBINIA) GHIESBREGHTIANA, in much the same line as the libonia, has scarlet flowers, and is a taller and prettier plant, though not so bushy. Now in full beauty.

DION SPINULOSUM.

LEPTOSYNE MARITIMA, with long-stemmed, cosmos-like, golden yellow flowers, is now at its gayest, and gives us a very desirable color at this time of year. Treat it as an annual.

CYPRIPEDIUM SPICERIANUM.—Given plenty root room and moderately warm quarters it seems to grow and bloom as freely as the indispensable C. insigne; only I get the largest crop of flowers from the last named when it is grown in a somewhat cool temperature, as a carnation house.

THUNBERGIA LAURIFOLIA.—Beautiful but annoying. It now is Christmas and this vine is drooping all over with clusters of showy bluish flowers, but they are only beautiful to look at growing on the vine, cut them and they wilt almost right away.

SMILAX in bloom is not only doubly beautiful in itself but exquisitely fragrant. If the fern-leaved asparagus be the more fashionable green vine, surely we have room also for smilax in bloom.

CHRISTMAS ROSES (Helleborus niger maximus).—When, early Christmas morning, I went with my big basket to the cold frame in which these were in bloom, I could not help thinking how many florists there are in the country who would be glad to have such a mass of snowy blossoms to pluck from. And these same plants have lived along, increased in size and bloomed every winter for years.

APONOGETON DISTACHYON, a sweet scented, white flowering, water plant from the Cape of Good Hope, is easy to grow, winter blooming and a very useful plant to have.

HIGHLY COLORED CROTONS.—I saw some exceptionally fine ones the other day. They had been grown in summer in a house glazed with ground glass and which is used during the winter season for plants in bloom. Here while the crotons were protected from direct sunshine they had such good light that their coloring was brought out in its best form and without scorching the leaves at all. Towards the end of the fall they were removed from this house to make room for chrysanthemums, to duller and warmer quarters.

Violets.

I think that the violet disease is entirely due to the plants being grown too delicate and being planted out too late.

My method of growing violets is as follows:

During September or October the runners are pricked into boxes where they soon strike. After they are well rooted they are potted into 2-inch pots and placed in a cold frame where they remain till spring. During the winter they are given abundant ventilation whenever the weather permits and an occasional syringing on bright days. The latter part of April they are planted out, one foot apart, and kept moist during dry weather. They are placed under cover the last week of September, at not more than 10 inches from the glass, being lifted with a good big ball of earth, so as to do very little damage to the roots.

Violets do not like heat. All they want is the frost kept out of the house or frame.

The above described treatment has always brought success with me.

Buffalo, N. Y. VALENTINE HAMANN.

Reliability.

In one of his recent speeches Mr. Rob't Craig dwelt at some length on the necessity of florists living up to their contracts. He very truly said that our business was a most uncertain one and that we should be extremely cautious in making promises. This speech was recalled to my mind in a funny way recently.

Early in July I ordered three packages of Sweet Peas for winter flowering from one of our leading seed firms. In due time two packages, Miss Blanche Ferry and Snow Flake, arrived and with them a notice that the other package would be sent as soon as possible. The seeds sprouted and grew finely and I thought no more of the promised package of Princess Beatrice. Imagine my surprise when the mail brought the belated Princess, four months after her friends.

Mr. Craig can now hold the seedsman up as a shining example to light the path of his brother florist.

JOHN WELSH YOUNG.

Germantown, Pa.

BARBARY THORN (LYCIUM BARBARUM).—A. L. S., New Orleans, sends us sprays of the bright red fruit of this vine-shrub and remarks: "The bush, or vine rather, is beautiful now with its vivid red seed balls, although it has suffered two severe freezes. The flowers are bluish, but fade into light tan-tinted blue and, except at a short period each season, when the vine becomes shorn of its foliage, the whole plant elicits the admiration of all beholders, though few appear to be familiar with it." It is an old inmate of gardens and hardy in the north as well as in the south.

BLUE BLOODED GLADIOLUS.—Mr. Wm. Ferguson, Groveland, Mass., writes that he is making gratifying progress toward the production of a blue gladiolus and adds: "In all my seedlings which contain blue blood the corms are invariably white in color. I have wondered if other growers have the same results."

Fungus on Carnations.

I notice Mr. P. J. Bauer, Cleveland, Ohio, asks if any reader of the FLORIST can suggest a remedy for destroying a fungus infesting his carnations. Shortly after housing my carnations I found about two yards square on a table of Silver Spray infested with brown fungoid spots; in its first state it appeared scale-like, a thin clean elliptic film rupturing irregularly and exposing a mass of shining brown spore-like bodies soon scattered in numbers round the parent mass on the leaves, as it became older or dead leaving a darker colored scab.

I had it syringed several times with a solution of sulpho-tobacco soap which has killed it and prevented it from spreading. If it is the same as Mr. Bauer has had he might try the sulpho-tobacco rather than throw out his plants. I think it strange that it is confined to Silver Spray. I found it on some plants of that sort by chance mixed with Lamborn and others. The wash did no harm except to destroy the glaucous hue on the leaves. JOHN SPALDING.

In answer to Mr. Bauer's communication on page 412, regarding fungus on pinks, would advise him to give his pipes a good coating of sulphur. We were troubled here with a fungus on Silver Spray, but since using above remedy have had no trouble. G.

The fungus on carnations, to which your Cleveland correspondent refers, is a *rust* which has long been known in Europe, but only made its appearance in this country about a year ago, and first attracted serious attention shortly after carnations were housed the present season. It has been brought across the Atlantic by some importer of carnations, and unwittingly disseminated. Its introduction into America is a great misfortune for the growers of this popular flower, as it is likely to materially reduce the profits of the business.

It may be recognized by brown spots on the leaves and stems, a sixteenth to a quarter inch long, filled with a dark loose powder, which readily comes off on the fingers. After it has appeared in a greenhouse there is little hope of controlling it to any marked extent during that season. It is worth while to experiment with some of the copper salts, liver of sulphur, or other fungicides, to see if occasional spraying of the plants will not keep it from spreading, but the results can not be predicted, as no such trials have yet been made.

The most promising thing to do is to make strenuous efforts to be rid of it during the summer. Take great care in selecting healthy cuttings for the succeeding crop, and destroy all plants which show any signs of disease during the summer. When placed out of doors select ground as far removed from that previously used for carnations as possible. Clean out the benches thoroughly and fumigate the house with burning sulphur. Refill with fresh earth, that must be free from disease germs.

By pursuing a course like this it will be possible to entirely eradicate the disease from an establishment. J. C. ARTHUR.
Purdue Exper. Station, Lafayette, Ind.

I think I am acquainted with the carnation disease described by Mr. P. J. Bauer, and it has been described and illustrated in the AM. FLORIST—though I fail to find it. It is very destructive to the plants sometimes, coming on in the open ground during the last of August and first of September when cool nights and heavy dews prevail.

This year the only varieties which were injured to any extent with me were Fred Creighton and Daybreak.

By carefully removing the affected leaves I have saved the plants, as it does not seem to affect the roots, though the first crop of flowers is much diminished. The usual remedies for mildew do not seem to affect it.

Prevention is the best thing. This is accomplished by keeping the foliage dry and a uniform temperature suited to the carnation, that is 50° at night and 70° during sunshine.

I once syringed my carnations in the morning of what promised to be a fair day in October. In the afternoon, before the plants were dry, a cold northeast storm set in and in one day the fungus made such havoc as I never wish to see again. Since then I am very sparing in the use of water on the foliage during the late fall and early winter. After steady firing begins the disease disappears and towards spring syringing is useful and necessary if red spider appears.

I think it would be a very good work for the state experiment stations to study the various forms of fungi and make sure the conditions which cause their growth and discover if possible what will not only destroy but prevent the growth.
S. F.

My carnations have been affected by the same fungus as that described by Mr. Bauer. One morning I noticed it on one plant and by the next morning half a dozen were attacked. Then I treated the affected plants and those around them with Hammond's Grape Dust, keeping the plants rather dry and especially keeping any moisture from the tops, and the fungus has entirely disappeared.
Cleveland, O. N. SOETGA.

Chester County Carnation Society.

The Chester County Carnation Society met at their headquarters Saturday p. m. The heavy storm of the preceding 24 hours combined with the ravages of La Grippe prevented several of the more distant members from attending.

It being the annual meeting election of officers was in order and the following were elected: Pres., Joshua H. Ladley, Kennett Square, Pa.; Vice-Pres., Edward Swayne, Kennett Square; Sec'y, Warren R. Shelmire, Avondale; Treas., J. J. Styer, Concordville.

Mr. Wm. Swayne, being absent on account of sickness, sent in his paper on "Propagation of Plants." He favored for best results low temperature, 40° at night and 10° higher in day for 3 or 4 weeks, then 10° higher until rooted, which will be in 3 or 4 weeks longer. Uses coarse limestone sand, waters well when cuttings are laid and slightly after.

Edward Swayne reported much better success this season with road sand than with limestone sand.

C. J. Pennock had used road sand for 2 years and had rooted on an average over 90%; an advantage seemed to be that cuttings rooted in road sand can stand longer than in sharp sand.

Mr. Ladley reported six finely rooted plants from C. W. Ward struck between temperatures of 36° and 42°.

"Marketing of Flowers" was discussed at some length. The secretary presented some figures and from reports received he estimated 65,500 blooms cut Christmas week, a reduction of at least 40% from the cut of the same week last year.

Mr. Barnard gave an account of the system practiced by the Niagara Grape Co. in sale of their goods, by which the product is concentrated for distribution to the consumers.

A committee of 3 was appointed to investigate the market system and report thereon.

Several seedlings were exhibited, notably Golden Triumph, from R. T. Lombard; Puritan, from Wood Bros.; Aurora, Edward Swayne; Pearl, C. J. Pennock; and a number unnamed from Jahn Bros. Mr. Thompson showed a new pink, very fine, with good fragrance.

Golden Triumph and Puritan, being new to most of the members, attracted much attention, and notwithstanding the flowers had been two days en route they were remarkably fresh.

The president made a few earnest remarks upon the loss to us as individuals and florists in the death of our fellow worker, Chas. T. Starr.

The meeting adjourned to the first Saturday in February. C. J. P.

Carnation Names.

Ida McKinley is sent by Messrs. Messmore & Turner; it is a pleasing shade of pink, large, very fragrant and a free bloomer.

Helen Galvin, similar to Wilder, but a freer bloomer and larger flower; Hesper, a bright yellow with scarlet stains scarcely perceptible. The last two by Lothrop Wight.

Grace Darling, a beautiful shade of pink, now being sent out by the originators, Chambers Bros.

S. Lenton sends the following: Lavina, large very double scarlet; Ramona, dark red striped white; Sunflower, yellow striped red; Buster, dark red very large; Piru, fragrant long stemmed white; Adelaide, satiny pink, large and double; Goldsmith, rich yellow, edges striped with red; Marvel, dark pink shaded with cream; Ideal, white, edges striped with red; Jennie Parker, dark pink changing to pale pink; Majesty, rich dark pink; Wide-Awake, dark red; Evangeline, white striped with red; Paradise, bright red, very fragrant; Oona, dark rich pink; White-Cap, pure white, large and double; Avalanche, dark pink; Romance, bright red very large.

Any one knowing the name of the originator and the parentage of the older sorts will confer a favor by sending them in, not for publication, but to have them properly entered in registry book.
Lancaster, Pa. ALBERT M. HERR.

Golden Triumph Carnation.

This new yellow carnation was raised in 1888 by John H. Pond, of Foxboro, Mass., and is to be sent out next spring by R. T. Lombard, Wayland, Mass. As the picture indicates the flower is full double, with stiff stems and of large size. If grown in a low temperature and during dark cloudy weather it shows a few faint pink stripes, which are but slightly noticeable. Mr. Pond says it will pro-

CARNATION GOLDEN TRIUMPH.

duce four flowers where Buttercup produces one, and that it is the only yellow he has ever grown for the wholesale market at a profit.

Some Queries.

ED. AM. FLORIST:—Will you please give me the benefit of others' experience as to the following points in carnation culture, etc.:

1. In setting boilers and making connections with chimneys, what is the best way of guarding against fire? Boiler brick set.
2. In chimneys will it pay to use two thicknesses of brick.
3. In erecting house for carnations, for blooms only, is the ¾ span, southern exposure, the best?
4. Which are the better, solid beds or benches?
5. If benches are used what is the best depth of soil—good rich loam being meant, not sandy or clayey?
6. Best average distance apart to plant?
7. Will cuttings strike best in bed with crate bottom heat?
8. What is best temperature if bottom heat be used?
9. In taking cuttings for own use what portion of plant should they be taken from to give best results? E. G. B.

New York.

New Year's day in New York is a very different occasion from what it was a few years ago. Its observance has been falling off steadily and the florists no longer work all night in preparation for the event. Quite a brisk trade in boxes of cut flowers and in presentation baskets is still had so that it is better than an ordinary midwinter day, but the demand is nothing in comparison with Christmas. The retail florists probably make more profit out of the present conditions than they did during the old rushing times, when, as Alex McConnell says, they acted as a kind of go-between for the customer and the grower, merely transferring the money from one to the other with little or nothing to recompense them for their hard labor, the prices they were obliged to pay being so high that there was no chance for a margin in retailing. Last year the wholesalers were badly overstocked with flowers and had to resort to every device to unload. This year they fared better and seem to be well satisfied with results.

The demand was not excessive and indeed was not appreciably increased until New Years' Eve, but the weather had favored them so that the quantity of flowers received was very limited and so they managed to clean up nicely without any great effort and at good figures. The retailers had been very wary and bought little or nothing in advance, prefering that the risk of carrying stuff should rest with the wholesalers, but by Thursday night they began to have courage and on Friday morning they were all ready to buy pretty liberally.

American Beauties, which had been somewhat overstocked early in the week, went off at a lively rate and there were not enough first class ones to go round. When you observe a man with a long bundle of nursery trees done up in brown paper under his arm in New York nowadays, it is not nursery trees, but simply a dozen first class American Beauties. Mermets were very poor in color, the only bright spot among them being an occasional Waban which had got mixed in unawares and whose bright color only served to emphasize the dullness of its neighbors. Yellow roses were scarce, so Perles brought good prices.

White roses were plenty enough, but not so badly overstocked as at Christmas. Cusins were excellent, also Wattevilles, and were used very generally for basket work where in combination with Roman hyacinths, white lilacs and gorgeous cattleyas they show up with beautiful effect. For dark roses there were a few Jacqs and plenty of Meteors. The Meteors sold well, but some of them were black as midnight and sadly belied their name. Bulbous stuff sold fairly well. There was quite a good stock of yellow narcissus, both single and double, the latter being rather stunted and unattractive in appearance, however. Mignonette was in plentiful supply, and of violets there were just about enough to go round. Scallen had a big stock of single violets in his window which seemed to be going "like hot cakes" with his customers, the prices being much lower than the double variety, and the fragrance even better. Carnations sold readily at $2.50 to $3, the Grace Wilder leading in quality and demand. On Friday morning everything sold at sight and it did not take the wholesalers long to clean out their stock, lock their doors and adjourn to their New Years' dinner. Most of the retail florists kept open till the middle of the afternoon. The display of baskets at Thorley's was superb and would have made a grand exhibition in themselves. Fleischman decorated the sidewalk in front of his establishment with a quantity

of baskets all ready mossed and in shape for immediate filling with flowers, as a possible bait for customers, and a pile of boxes tied up and labelled, presumably full of flowers, a somewhat questionable advertisement, as, provided the boxes were bona fide orders, the effect upon customers in this aristocratic neighborhood of exposing their goods to the public gaze on the sidewalk would be most annoying. Siebrecht & Wadley were very busy. Their window was resplendent with orchids and lilies, some auratum lilies showing up with gorgeous effect. Hodgson and McConnell on opposite sides of 5th avenue were both as busy as they could be, the main trade being for boxes of loose cut flowers. A basket that went out from McConnell's made of American Beauty roses, lilacs, cattleyas and Hamburg grapes was a stunner.

On the day following New Years flowers were scarce everywhere. Even at the 34th street ferry, whose former glory has well nigh departed and which has come almost into undisputed possession of the "Greeks" (Johnnie Weir, of Brooklyn, and Dickerman, of New Haven, being the only saving graces left), there was quite a sprinkling of aristocratic buyers. Johnnie Weir created a sensation by getting into a very loud Mackintosh and pair of swell gloves and posing as a dude with much success, and the fact that there were no bargains floating round did not appear to worry him in the least.

Siebrecht & Wadley's orchid houses at New Rochelle are looking beautiful just now. Cattleyas are in great variety, one form of C. Percivaliana being especially rich. Calanthes, lælias and Jycastes are also in full display.

Frederick Mau, the orchid importer, is dangerously ill with pneumonia and a complication of other diseases and his friends are much alarmed.

The annual supper of the N. Y. Florists' Club will take place at the Arena, 39 and 41 West 31st street, at 9 p. m. Monday, January 11.

Philadelphia.

The first day of January was the growers' holiday. There was a genuine demand and nothing, or next to nothing, to supply it with. We don't remember having seen stuff so scarce in the past five years. Everything in the shape of a flower was picked up at once. Nearly all the crops were off and very few growers brought in more than a third of their usual cut, and what there was of it was so close and small as to be almost unsalable.

It is astonishing to see the kind of flowers people will buy and carry away on a holiday, as after having tried in vain in some half dozen stores they finally secure a few blossoms which should have come in with the next day's shipment, and go away satisfied and glad to have gotten even these, which any other day would have been declined at any price.

Carnations have been more in demand and have brought higher prices than any previous season, $3 to $4 a hundred (and some of them not very good at that) has been the market price; they surely ought to pay at these prices.

While roses were very scarce they did not command the price of the week before. Perles, Gontiers, Sunsets, Niphetos brought $8; La France, Mermets, Brides, $12 to $15; Beauties $50 for the best, but they were not up to the mark; there were no hybrids worth talking about.

Tulips are in and sell at from $3 to $5. Freesia has made its appearance, R. Atkinson, of Edgewater Park, having the first; it brought $2. Hyacinths and paper white brought $3 to $4 and valley $6. Double violets are becoming more plenty and sell for $1.50 a hundred.

The next meeting of the Florists' Club promises to be quite an interesting affair. Some 12 candidates are to be elected and Mr. Griggs' paper will no doubt be listened to with great attention, as there is always sure to be considerable discussion when business methods are being considered.

The club room was almost entirely deserted during the holidays, as there was no time for ten pins, but now that the rush is over there will no doubt be matches and contests galore.

The club room committee have adopted the following plan for deciding medal winners: The members are to be divided into three classes, those who frequently make 150 and over for the first class, 125 and over for the second class and 100 and over for the third class. Each class will roll three games once a month and a medal or other prize will be given to the winner every three months, at the end of which time a new contest will be commenced.

The record for three games has been broken by Lincoln Brown, who made 570 pins, an average of 190 to a game.

Robert Craig is still confined to his bed. He gains strength very slowly. His physicians say that the worst is over and quiet and rest will bring him about all right in a short time.

Chicago.

The New Year's trade this year was fully up to expectations. None of the dealers prepared for a great rush, as the experience of the last half dozen years has shown that the demand for flowers on this day has steadily decreased. A number of the retail men report an increase over last year's sales and on the whole business has been quite satisfactory.

There has been a great scarcity of stock ever since Christmas and prices were held firmly at figures only a shade lower than at Christmas.

The stock of roses has not improved in quantity or quality, although Mermets showed an improvement in color. Brides and Mermets were held by the commission men at from $14 to $16. Perles were almost an unknown quantity—stock was very small and very poor, but the price commanded was from $10 to $12. Gontiers were a little more plentiful, but still not enough to go round, at $6 to $8 per hundred. Beauties were held at from $50 to $60, with a good demand and limited supply. Carnations were more scarce than for Christmas. All the growers had cut everything for Christmas that was fit to market, consequently the market was short on most varieties. White—both long and short—are particularly scarce and the dealers have experienced great trouble to supply their orders, as the demand for funeral work has been heavy.

Violets are still extremely scarce and are consequently held at very high prices. In bulb stuff the market was also short. Romans, which in former season had been a perfect drug, were in good demand and every flower was sold at good prices. In Valley the quality has not improved. Most of the stuff that appears on the market has not a single leaf and takes but poorly.

The first hybrids, Magna Charta, came in for New Years and were of very good quality. The stock of Harrisiis was quite large, but there was no trouble in disposing of every flower.

The wholesale men report an extraordinary demand for shipping orders. From Dec. 20 until the present date fully one-third of the orders could not be filled.

Boston.

New Years' day receives but little attention in Boston as a holiday, "swearing off" being the principal use made of it. A record of this feature of the celebration, how long the good resolutions lasted, etc. would be "mighty interestin' readin'," but would hardly come within the scope of horticultural news, so it will be passed over in silence. The wholesalers who depend in a measure upon the shipping trade, however, always get a little spurt of business from those localities where New Years is more generally observed. This is especially true when, as is the case this time, the weather has taken a cold and stormy turn, and the stock of cut flowers throughout the country is shortened up. Good roses are as scarce as they were for Christmas. Even poor ones are scarce this week, which is a rare event nowadays.

The Mermets in market are terribly off in color, and the Waban is beginning to assert itself. Whatever faults the Waban may have, it is at least guiltless on the point of color in bad weather.

Carnations are all right in quality and hold well up still to Christmas prices. Violets are somewhat lower in shipping price, but are not plentiful enough to break in price as they did at Christmas. Harrisii lilies are in great and unexpected demand. They have been cut off clean everywhere in this vicinity and but few are obtainable. Lily of the valley is extra in quality with fair demand. Narcissus, paper white and single trumpet, are selling better than last week, and the same is true of Roman hyacinths. Tulips, the little scarlet Due van Thol variety, with stubs of stems two to three inches long and slinky, wizened petals have been in the market for a fortnight, but nobody wants them. If it is an impossibility to force a tulip for the holidays that looks like a tulip it would be wiser not to attempt it at all.

There was a very interesting and suggestive exhibition at Horticultural Hall on December 26-29, consisting of dried and mounted specimens of flowers and ferns collected and prepared by school children.

All of the herbariums were well done and deserving of great praise and some of them would have done credit to a professional botanist. No show is complete without a monkey, it is said, and the monkey in this case was the big bulletin at the entrance to Horticultural Hall, which read thus: "Window Gardening Committee's Free Exhibition of Herbariums *prepaired* by Pupils of the Public Schools." And this in Boston!

The list of exhibitions and schedule of prizes offered by the Mass. Horticultural Society for 1892 is just out. The amount appropriated for premiums for plants and flowers for the year is $4,250. A number of changes and additions have been made as compared with last year's schedule, notably in connection with the chrysanthemum show, which seem to be steps in the right direction. Much regret is expressed at the resignation of Mr. P. Norton as chairman of the Committee of Arrangements, and it is sincerely hoped that he can see his way clear to a withdrawal of the resignation, for there is no one who can fill the position as he does.

The seed and agricultural implement houses, by mutual agreement, closed their places of business from Thursday night, December 24, until Monday morning, December 28.

On the sick list: Charlie Evans, of Watertown, and D. L. Taylor, of Melrose.

Buffalo.

Holiday trade came and went in rather an uneventful manner. A good steady trade was reported from more quarters and less of the hurry and bustle that goes with numerous large orders and decorations, such being in the minority here this season.

Rather a larger lot of some kinds of flowers than usual was left in the hands of some of the retailers on Christmas, notably white carnations and some roses. Could white carnations have been transformed into red, Perle roses changed to pink, what an agreeable transformation it would have been! The week following Christmas day, and with the close of the 31st, saw all the stocks of all kinds of blooms well disposed of and everyone generally in good spirits.

The most unwintry weather known has prevailed largely. In order to make matters lively in winter snow and cold is needed in this latitude rather than a California or Florida atmosphere and temperature.

G. Gabrielson, formerly of New York, is in the employ of J. H. Rebstock, who is rapidly annexing each approachable district in the city to his territory. He now has under his domain four distinct places of retail business.

The club took a recess perforce on the 22d ult. No quorum present, so no New Year welcoming formalities were arranged.

Wm. Scott's windows now are a glow of brilliant tulip flowers. His favorite style of displaying them is as flowered in the flats, these being tipped forward and arranged in tiers.

W. J. Palmer reports a specially abundant cut of Wilders during the month of December in his houses at Lancaster. Lilium Harrisii and Narcissus are in full supply with him now.

Violets have done only moderately well. No one has been heard to boast so far.

L. B. D.

The weather of New Years and preceding few days was a great improvement over Christmas weather, which helps to account for the unusual good sales of New Years. A few florists who did not sell out clean at Christmas laid in rather a light stock for New Years, and the demand being better than for several years past every flower and salable plant was sold.

W. J. Palmer & Son had a fine display of orchid blooms in their window and Scott had a few fine blooms of his own growing. The demand for orchids in Buffalo is very limited as yet, but we hope a persistent display of them will educate the flower buying public and create a demand.

Many good potted plants were sold for Christmas and New Years presents. Azaleas, poinsettias, begonias, primulas, Roman hyacinths and Paper White (3 or 4 in a lot) all sold well and there was quite a demand for good palms and dracænas.

There was little bulbous stuff forced except Romans and Paper White and they all sold. Most all the holly coming to our city was of A 1 quality and the demand was equal to the supply.

Mr. Long was to the front as usual with a most attractive display in his window. Dan has the faculty (or art) of always having a beautiful window. Rebstock reports that he is more than satisfied with the holiday trade in all departments. Mr. C. F. Christensen, whose houses are on Delaware avenue (a good way out), has opened a store on Allen street. This should be a good move for Mr. C., as his store is in the heart of a fine residence territory. Christensen has had the good sense lately to tell the boys he is coming into the Florists' Club with all his might. It is to be hoped his example will be followed by a few others.

Frank Faehr has been engaged as florist at the greenhouses of the State Insane Asylum; this should suit Frank, and John Jones has taken his place at Mrs. D. Newlands' Forest Lawn greenhouses.

Mr. Mepsted has suffered trouble this past two weeks with gout in his right foot. However he pluckily held out during the holiday rush, much to the benefit of his employer. Gout is brought on—well by the usual cause—and partly by the pressure of the big toe on the slippery bowling alley.

G. S.

Cincinnati.

The whirlwind is past and once more the florists of this city are settling down to substantial business. They have had an elegant business and are all feeling good. The Christmas trade was handled with a great deal more satisfaction than the New Years' trade. On Wednesday the wholesale houses could not begin to fill their orders and the growers were only sorry that it was not in their power to manufacture a larger cut.

One thing the wholesale dealer does not have to contend with in this city is the fact of growers holding back their stock and salting for higher prices. They have learned by sad experience that this kind of work won't do.

The evergreen and holly trade was an exception this season, everything being sold and at good prices!

At the last meeting of the Cincinnati Florists' Society they settled beyond a doubt the question of holding a chrysanthemum show this fall and we are now preparing the premium list, which will be ready in a short time. On Jan. 9, '92, this society holds its annual meeting for the election of officers.

During the next three months the orchid will claim prominence in this market and the prospects are very flattering for a plentiful supply. There will also be plenty of good Am. Beauty roses as well as all others from now on; carnations will also be equal to the demand, and taking all in all the trade so far has been all that could be expected.

E. G. GILLETT.

Toronto.

All the florists I have spoken to seem to be well satisfied with the business done at Christmas time and up to the end of the year.

The retail price of roses was slightly lower than last year but all that were to be had met with a ready sale. Carnations were plentiful and the demand good; chrysanthemum blooms still showed up pretty well. I saw a really good bloom of Kioto to-day. Manton Bros. grow a single chrysanthemum, dark old gold outside, lighter in the center, they say it sells on sight; it is a very late bloomer and was raised from seed here by a gardener who did not think anything of it and would have thrown it out but Tom with his far-seeing eye took it in and is being rewarded now.

Plants sold briskly, particularly the pink flowered Begonia carminata, or incarnata, or carnata (which is it?) little 25 or 30 cent plants went off like hot cakes.

I bought a plant labeled Passiflora cardinalis the other day. It had evidently been imported from England, most probably from Low's. I can see no description of it in Nicholson's dictionary. Does Mr. Falconer or any one else know anything about it?

E.

St. Louis.

We are having some winter at last, for on the first day of the new year came a snow storm worthy of the name. Trade, both wholesale and retail, is still very brisk. The cry of "sold out" has been an oft repeated one.

Palms in variety and flowering plants of Cyclamen persicum have sold well. Messrs. Jordan have a very fine show of roses, their new house 36x315 feet being especially good. The Waban has not met with very good success here. Messrs. Jordan are proving that Cyclamen persicum can be successfully grown in this climate from seed.

Why is it that Linum flavum is not grown more during the winter months? Here is an old favorite with its bright yellow flowers, in blossom from beginning of November until March, easy to grow and propagate, and still very few florists seem to keep it. Mr. Michel has a ready sale for it and recommends a cool house.

The following points in regard to forcing lily of the valley were gleaned at Messrs. Michel's establishment, where "valleys" are grown to perfection: Force under sash in greenhouse, thus using double glass; cover with one inch sphagnum until shoots show through, and then uncover; keep sphagnum moist at all times; syringe every other day with lukewarm water and keep temperature from 90° to 95° steady. The frames of course can be built over part of the regular heating apparatus of the house.

The new heating plant of Messrs. Young has been inspected and insured.

J. W. D.

Montreal.

From reports so far holiday trade was fully up to last year. Very little call for "made up" work, the run being on loose flowers, such as roses, carnations and violets being in chief demand.

Plants sold well and owing to the very mild weather were delivered with less trouble than is usually the case with us. There is not the demand for bouvardia, narcissus and Romans there used to be, the taste being for better class flowers.

The 'mums though fairly good for the season would not sell so long as there were any roses or carnations to be had. Taken all round Christmas trade was good and the "grumbler" has yet to be met, though probably he is around.

J. B.

Newport, R. I.

The Newport Horticultural Society held an important meeting on December 23. The report of the treasurer being read it was found that after all bills were paid there was a balance in the treasury of $250 for a basis to work on for the coming year. The advisability of a straw-

berry and rose show to be held in the spring was freely discussed and it was conceded by all in favor of such a show.

After the general routine of business the Hon. John P. Sanborn in a very happy manner presented to the President, Col. A. K. McMahon, in behalf of the members of the society, an elegant gold watch and chain. The Colonel was completely taken by surprise, but nevertheless responded in fitting words.

At the close of the meeting the society marched in a body to a restaurant where there was a supper awaiting them. After supper speeches were made by L. D. Davis, Esq., Hon. John P. Sanborn, Col. A. K. McMahon and other members of the society.

The party spent a most enjoyable evening. Such gatherings have a tendency to bind the members of an organization closer together. J. J. BUTLER, Sec'y.

News Notes.

DENVER, COLO.—The annual meeting of the State Bureau of Horticulture will be held in this city January 14.

OWATONNA, MINN.—The 25th meeting of the Minnesota State Hort. Society will be held in this city Jan. 19 to 22.

DES MOINES, IA.—The annual meeting of the Iowa State Hort. Society will be held here January 19, 20 and 21.

EAGLE GROVE, IOWA.—The seventh annual meeting of the Northern Iowa Hort. Society was held here December 15 to 17.

FRANKFORD, PHILA.—Fowler Bros. have started in business with two houses 48x10 each, at 5031 to 5035 Charles street.

PORTLAND, OREGON.—The seventh annual meeting of the Oregon State Hort. Society will be held in this city Jan. 12 and 13.

KALAMAZOO, MICH.—Mr. S. S. Cobb died December 30 of pneumonia, aged 72 years. He was for 20 years superintendent of Mt. Home Cemetery.

SING SING, N. Y.—Christmas trade was never before so poor as this season. The stormy weather may have been partly the cause, but it seems to me as if our Christmas trade is going to pot very rapidly.

YUBA CITY, CAL.—A call has been issued by the Sutter County Hort. Society for a meeting of delegates from all counties of the state north of San Francisco on Feb. 10 to consider the propriety of organizing a World's Fair association for northern California.

GREAT BARRINGTON, MASS.—F. T. Dellert of this town was recently burnt out, losing all his memoranda of business as well as catalogues and circulars received from dealers. He is anxious to receive a new supply and our readers will doubtless accommodate him.

BUTTE, MONT.—The first floral establishment in this city of 35,000 has been built, about 1½ miles from the center of the city, by Mrs. D. J. Knox. She has put up about 10,000 feet of glass, probably the largest range of glass between Minneapolis and Portland. She has also opened a floral store at 202 Main street to be conducted in connection with the greenhouses.

EAST MORICHES, N. Y.—The Cottage Garden Greenhouses, Mr. C. W. Ward manager, have purchased 14 acres of land at New Providence, N. J., near Summit, and next summer will move their present plant to the new location, and erect as much additional glass as they now have here, making a total of about 10,000 feet, all to be devoted to carnations, violets and pansies.

GRAND RAPIDS, MICH.—The winter meeting of the Grand River Valley Hort. Society was held here December 22 at Burton Farm, the home of Mr. Chas. W. Garfield. The meeting was a very interesting one. President Garfield declining a renomination officers for the ensuing year were elected as follows: Jos. A. Pearce, president; Wm. N. Cook, vice-president; Thos. L. Brown, secretary; E. Chase Philips, treasurer.

SYRACUSE, N. Y.—Our florists are feeling very happy over their Christmas trade, which was far in advance of previous years. Holly was well berried and sold well; one firm sold 20 cases. The demand for flowers was very good and prices ruled well. During the holidays there has been great activity in society, and at each event flowers have been used more lavishly than ever before. La Grippe, too, has been very busy and has carried off quite a number of people. One florist told me he had been working 36 hours making up pieces—and he had great difficulty in getting flowers.

SITUATIONS, WANTS, FOR SALE

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By a good rose grower, married, good reference. C D, care Am. Florist.

SITUATION WANTED—By practical florist and gardener; private place preferred. Address W S, care Albert Schagan, Penn Yan, N. Y.

SITUATION WANTED—By a single man, as rose grower, propagator or general greenhouse work on a commercial place. Best of references given. JESSE G. STRONG, Fern Creek, Ky.

SITUATION WANTED—In seed trade; 11 years' experience in English seed houses; all round knowledge of book-keeping B W F, care Mr. Heather, Belvoir, Yonkers, N. Y.

SITUATION WANTED—As foreman in a commercial place, where American Beauties and La France are specialties. Good wages expected. Strictly temperate. Address FOREMAN, care American Florist.

SITUATION WANTED—By a young Englishman, age 21, as gardener; experienced in chrysanthemums, orchids, roses, stove and greenhouse plants; 6 years good reference. Address W, care American Florist.

SITUATION WANTED—By florist and gardener on private or commercial place; single; 20 years' experience; sober and industrious. Best of references. Please state wages J. F. BROWN, Highlands, Newport, Ky.

SITUATION WANTED—By florist and gardener; German, married, age 39, private place. Successful rose grower, best of references both private and commercial, also from present employer. Address B M, care American Florist.

SITUATION WANTED—By a first-class florist, single, German, 25 years of age, honest and industrious; thorough knowledge in growing roses, carnations, palms, propagating, cut flowers; well up in design work and decoration. Can give references. E P, care American Florist, Chicago.

SITUATION WANTED—By florist, single, age 28, 10 years practical experience in all branches of horticulture, well up in roses, carnations and bulb forcing and thoroughly capable of taking charge. Good references Address THOS. MCKENZIE, 113 John St., Cincinnati O.

SITUATION WANTED—By a young man who has had eight years horticultural experience with a prominent seedsman and florist in both warehouse and greenhouse. Good practical knowledge of botany and gardening; 25 years old, single and American; city or country references Address P W A, care American Florist.

SITUATION WANTED—By a German florist and gardener, age 33, married, small family, strictly temperate, having 19 years practical experience from first class German and American private and commercial places, best references. Violets, roses and carnations my specialties. Good salary. Address FLORIST, East Moriches, Long Island, N. Y.

SITUATION WANTED—By a German, age 30, married, as foreman in private or commercial place, who at present holds the latter. Thoroughly versed in growing roses, carnations, bulbs and plants. Has had experience in leading places in Germany, France and this country for a number of years. Good references. Address CHAS. JOHNSON, care John Reid, 687 Bergen Ave., Jersey City, N. J.

WANTED—At once, a florist, one that understands growing roses, carnations and other cut flowers. Address E L, care Am. Florist.

WANTED—Parties to build two greenhouses 20x100 feet for parties well established in the trade, having at present 630 square feet of glass. Address A D, care American Florist.

WANTED—Experienced and competent grower to take charge of six greenhouses. Experience as grower for the cut flower trade necessary RICHMOND FLORAL CO., 15 W. Broad St., Richmond, Va.

WANTED—A good rose grower for commercial place who has had experience in growing other stuff also. Address SUN, care American Florist, stating wages expected and giving references. A good place for a first class man.

FOR SALE—Two greenhouses, 1,600 ft of glass 2 acres of land, and wind mill; in one of the best towns of Texas. Address W A C, care American Florist.

FOREMAN—For general florist business. John N. May can with confidence recommend a really good practical man for such; age 36, married Address for particulars to JOHN N. MAY, Summit, N. J.

FOR SALE—New greenhouse establishment on a main thoroughfare; cars pass the door every few minutes; about 1 700 feet of glass, heated by hot water; brick dwelling house, all latest improvements. 687 Dover Court Road, Toronto, Ont., Canada.

The Advertising Department of the AMERICAN FLORIST is for Florists, Seedsmen, and dealers in wares pertaining to those lines ONLY. Please to remember it.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

IN RESPONSE to a communication rerently received from one of our readers we are impelled to again call the attention of some of our advertisers to the necessity of keeping their advs. fresh and up to date. It certainly is, as our correspondent says, very annoying to order stock advertised and then receive the answer "We are sorry to say we are all sold out," and then to note that that particular stock has not been eliminated from the subsequent advs. of the same party. When you sell out on any item of your stock, do not fail to order a change in your adv. at once, and if too late to reach us by mail by the following Monday use the wires. It will pay every time to keep your announcements of stock right up to date of going to press. We are always glad to make any necessary changes in advs, only recollect that orders for such changes must reach us by Monday afternoon to enable us to make them for the issue of the following Thursday. On account of the fine press work on the FLORIST we are obliged to go to press early in the week.

SINCE we began the publication of Mr. Menand's personal recollections we have received many expressions of admiration for him from those who have known him well, Mr. Valentine Burgevin, Kingston, N. Y., taking the trouble to write us a four-page letter to express his great regard for Mr. Menand as a man of the strictest honor and of unusual skill as a plantsman. Mr. B. concludes by saying: "The fraternity will unanimously take Father Menand by the hand and wish him a Happy New Year."

WE HAVE received a copy of the constitution and by-laws of the American Carnation Society. It is very neatly printed and fully sets forth the objects of the society. Those contemplating becoming members of the society can secure copies by addressing the secretary, Mr. C. J. Pennock, Kennett Square, Pa.

SEND US a report of the holiday trade in your city or town. Was it greater or less than last year? Were retail prices higher or lower? Was the supply equal to the demand at prices asked?

OUR REPORTS show that the demand for flowers for New Years was unexpectedly large and the supply short.

Catalogues Received.

F. Barteldes & Co., Lawrence, Kans., seeds; Alex. McBride, Alplaus, N. Y., rooted cuttings; H. E. Chitty, Paterson, N. J., rooted carnation cuttings; August Rolker & Sons, New York, trade list flower seeds.

REMOVAL.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

W. ATLEE BURPEE, G. H. Leahy and S. Y. Haines visited Chicago Dec. 31.

MR. MAULE'S new catalogue has 10 colored plates and costs 7 cents postage to mail.

THE U. S. TREASURER has lately decided that yellow immortelles must pay duty of 10% and colored 20%.

WM. H. RAND, formerly with M. B. Faxon of Boston, has taken a position in the employ of Wm. Elliott & Sons, New York.

THE BOWLING TEAM of the seedsmen connected with the John Lewis Childs' establishment recently won an exciting match game with a team representing the business men of Floral Park.

AN EUROPEAN trade seed list just received describes a new cucumber which "produces its fruit in such an abundance that it is nearly impossible to see anything of the foliage and tendrils." They ought to have an "exaggeration committee" over there.

SEED advertisements are being run later than usual for 1892. Mr. Burpee will have 2 pages in February Century. Four other firms will each run a full page in that issue. Mr. Maule will have a full page in January special issue of the Youth's Companion and Mr. Childs a page in February. These cost $2,500 each issue.

Succession Crops.

I grow bedding plants mainly and would like some suggestions regarding the best way to get the most I can out of my houses. What crops shall I raise and in what succession to attain the best results? My trade is entirely retail and am located in a community where most any good stock will sell. F. B.

Perfumes From Flowers.

Will those in the trade who have had experience or may know by seeing the process worked, tell me if distillation is a desirable and profitable mode of extracting perfume from flowers? I would also be pleased to know what kinds of flowers are the most profitable to work (if at all) in Ohio. Any information as to processes, varieties of roses and other flowers that could be grown to best advantage will be thankfully received.

SUBSCRIBER.

MR. H. V. LAWRENCE, Falmouth, Mass., has sent us a copy of a very neat holiday announcement to his customers. It has four pages and a cover, the pages about 4 by 5 inches. In the center of the first outside cover page are the words "Christmas Greens" in gilt, on the second inside page occurs the same title in green, the next two pages contain the list of greens, on the following page occurs the florist's name and address, and on the last outside cover page appear the words "Decorations for Church or Home" also in gilt. It is certainly a very neat circular and was undoubtedly very effective.

Burpee's Seeds Grow

And produce strong, thrifty plants and these plants develop into the choicest vegetables and most beautiful flowers after their kind. Burpee's Seeds are tested, not only for vitality, but also for trueness to type; each variety is maintained in purity and many are improved by constant and intelligent selection, so that we can honestly state BURPEE'S SEEDS are THE BEST, the VERY BEST it is possible to produce, and are warranted. Do you want such seeds? If so write to-day for BURPEE'S FARM ANNUAL for 1892, which gives honest descriptions, faithfully illustrated, of all the best seeds, including Burpee's Bush Lima and other rare novelties of surpassing merit. Every progressive farmer and gardener should read it. Free to all who intend to purchase.

W. ATLEE BURPEE & CO., Philadelphia, Pa.

1892. GREGORY'S SEED CATALOGUE 1892.

For Over Thirty Years

we have always had very pleasant dealings together, the public and myself, and I again have the pleasure of presenting to them my Annual Vegetable and Flower Seed Catalogue. It contains the usual immense variety of seed, with such new kinds added as have proved to be real acquisitions. Raising many of these varieties myself, on my four seed farms, and testing others, I am able to warrant their freshness and purity, under such reasonable conditions as are contained in my Catalogue. Having been their original introducer, I am headquarters for choice Cory Corn, Miller Melon, Eclipse Beet, Hubbard Squash, Deep Head, All Seasons and Warren Cabbage, Etc., Etc. Catalogue FREE to all.

J. J. H. GREGORY & SON, Marblehead, Mass.

NO ONE largely interested in fruit growing should fail to read the paper on "Pomology in the eleventh census," read before the American Pomological Society at Washington last September. The paper was prepared by Mr. Mortimer Whitehead, who had charge of this division of the census, and the paper has been published in pamphlet form by the government. Copies may be had on application to Mr. Mortimer Whitehead, Census Bureau, Washington, D. C.

WE HAVE received from Mrs. R. Mauff, Denver, Colo., a photograph of a design arranged by her for a "doll's fair" held in Denver December 10. It was the figure of a doll 27 inches high, a wax head being used, the dress and drapery being of flowers. The front of the dress was of Silver Spray and the back and train of Grace Wilder carnations. The sleeves were of stevia. It proved a very taking feature of the fair.

IN A DISCUSSION at the recent meeting of the Eastern Iowa Hort. Society at Oskaloosa, upon worms and bugs that the fruit growers have to combat, one speaker said there was a bug upon nearly all the stock sold by the persistent tree agent that was rarely catalogued among the insect pests though the damage done by it was frequently equal to all the rest put together. He announced the name of this bug as "Humbug."

MR. JOHN S. FORSTER, of Evanston, Ill., has paid some little attention to crossing the chrysanthemum, and some blooms shown us recently, cut from his seedlings, were nearly all worthy of names and places in the already long list of "mums."

A LARGE AGAVE.—Mr. W. J. Hesser, Plattsmouth, Neb., has a large specimen Agave Americana that necessitates a special house, 24x26 and 14 feet high, for its accommodation. And he will have to build the roof higher next year.

MESSRS. Ludwig & Richter, Allegheny City, Pa., have sent us a photograph of their table decoration at the recent exhibition in Pittsburg. The photo is too indistinct for reproduction.

MR. J. A. DEVEER, New York, met with a serious loss by fire at his nurseries near Northport, N. Y., December 9.

AMARYLLIS FORMOSSISSIMA.

A grand and very useful Mexican Bulb, for planting in the open ground for cut flower purposes. Bright scarlet flowers freely produced in the early summer. Very strong bulbs.

	Per doz.	Per 100

JOHN F RUPP, Shiremanstown, Pa.

Electro-Culture.

Electro-culture is a new word that has recently been coined. It refers to the cultivation of plants under the influence of electricity.

The English *Gardeners' Chronicle* in a recent issue recounts the progress that has been made in electro-culture and records some very interesting experiments in which some remarkable results were obtained. It was found that the electric light in its full intensity was on the whole unfavorable, but that when softened by interposing white glass really wonderful stimulation of growth, blooming and fruiting followed. Glass of other colors were tried. Progress was much slower with yellow glass and the plants were less vigorous and paler in color; the red glass produced a medium growth, but the foliage was meagre and yellowish; the blue glass yielded the worst results of all.

The *Chronicle* concludes its article as follows: "It appears, then, that the effect of the electric light upon plants is of a very powerful order and such experiments open up an exceedingly interesting line of research, which might lead to really practical results."

The experiments in electro-culture that will be conducted by Chief Thorpe in the cave under the great rock work beneath the central dome of the Horticultural Building of the World's Fair at Chicago in '93 will be most interesting, as he will have the assistance and hearty support of the Chief of the Department of Electricity and the suggestions of Mr. Thomas A. Edison.

CYCAS REVOLUTA STEMS,

To be delivered from February to April. By weight, roots and fronds trimmed off. We handle the

TRUE LONG-LEAVED SORT

only, and can furnish in sizes of from 4 inches to 4—6 ft. We imported over 30,000 lbs. past season, and can refer to the best firms in the United States as to satisfactory results. EXTRA VERBENA SEED.
IMPROVED GIANT.

This magnificent strain of Mammoth Verbena has given perfect satisfaction to my many customers in the florists' trade, and is justly claimed to be the finest in cultivation. The florets measure over an inch in diameter, borne in immense umbels. Very free flowering and of the finest colors. Every florist should be sure to sow of it. Trade pkt. 25 cts.; 3 pkts. 60 cts.; 6 pkts. $1.00.

JOHN F. RUPP, Shiremanstown, Pa.

Mammoth Verbena Seed.

NEW CROP NOW READY. Choicest mixed varieties in the brightest colors. Per trade packet, 50 cts; 1-4 ounce, $1.00; per ounce, $4.00.

The strain we offer this year is far ahead of that sold last season with such satisfactory results. Only the richest colors have been retained, and the largest flowers selected for seed. Seedling plants are now preferred by the leading florists for spring sales because of their vigor and freedom from rust. With this strain to depend on there can be no doubt about the success.

DREER'S DOUBLE HYBRIDIZED PETUNIA SEED, so well known to the trade for the past 30 years, constantly improving by judicious hybridizing. Trade pkt containing 700 seeds, $1; small paper 15c.

DREER'S SINGLE GRANDIFLORA MOTTLED AND STRIPED PETUNIA. This strain will give splendid results in pot culture, as well as open ground. It is rich in colors and markings, and of largest size. ⅛ ounce, $2.50; trade packet, 75 cts.

Cobea Scandens per oz. $.25 Centaurea Candidissima, per oz. $2; per 1000 seeds, 50c.
Smilax Seed, per lb. $8 " 60 " Gymnocarpa, " 50c. " " 30c.

☞ Preliminary flower seed list to the trade of seasonable seeds now ready; mailed free to the trade.

HENRY A. DREER, Philadelphia.

100,000 VERBENAS.

THE CHOICEST VARIETIES IN CULTIVATION.

Mention American Florist.

Killing Greenfly.

In reply to Mr. Geo. Stafflinger I would say I have used almost the same plan for killing greenfly for the last five years and found it most satisfactory.

My method is to burn Scotch snuff on a piece of red-hot iron at the rate of 2 oz. for 500 feet of glass and it never fails to get every fly. This small quantity will not injure the tenderest plant, but if any one doubts the effect let him try to stay in a house during the fumigation.

Some may object to this method on account of the price of the snuff, but I have no doubt that tobacco dust ground fine enough would do equally well. I consider it cheaper than evaporating tobacco juice on account of the saving of labor, and then I have never got any satisfaction from tobacco juice.

By the way, is a variegated leaved carnation anything new? I have one the leaves striped with creamy white.

Greenfield, Ohio. CHAS. POMMERT.

Butted Glass.

Nothing has been said for some time about above system of glazing. Are we to infer from it that this system has not met with favor? If so, what are the causes of failure? Glazing is of very great importance to us all, and if it can be improved upon in any way it is well worth a trial.

In erecting a new range of houses last summer I decided to butt the glass, using double strength 14x14 and screwed the caps down tight at every alternate pane. The result has been most gratifying, as the roofs are absolutely watertight and much more airtight than any house glazed in the old way can possibly be. No putty or white lead has been used. I consider such useless. On long spanned houses it is advisable to saw the caps in two or three pieces, that saving the trouble when repairing the glass from taking off the whole length.

C. A. DAHL.

725 Arch St., Philadelphia, Pa.

Mention American Florist.

Trenton, N. J.

Mr. Harry Chambers of Bristol, Pa., writes us a letter describing a visit to the greenhouses and nursery of C. Ribsam & Sons of Trenton, in which he speaks very highly of the business enterprise of this firm and expresses gratification at the kindly welcome which he received. The greenhouses are situated in the finest part of the city and are devoted entirely to the growing of plants and flowers for their retail trade. The rose houses our correspondent describes as in unusually fine condition. Three new palm houses 100x20 have been recently built. Seven small hot water boilers have been taken out and sent to the nursery to heat the new houses erected there and have been replaced by a 60 H. P. Union boiler. Their large boiler formerly used for steam has been changed to hot water and in future the entire place will be heated by hot water under pressure. Their Union boiler, although quite common hereabouts, was rather a novelty, it really consisting of two distinct boilers set one above the other and connected, the lower boiler or heater being over the fire and tubular in style, the upper or storage boiler holding a solid mass of eleven hundred gallons of water, which when once thoroughly heated would retain its heat a long time. During an experiment made a short time ago a small fire was lighted under this boiler and coaled but once, being allowed to die out afterwards. The water retained its heat over twenty-four hours.

There have been added to the range of greenhouses at the nursery six new houses each 75x18 for rose growing, making twelve in all on this section.

Poplars.

Will some reader of the FLORIST give me some information about poplars? What are the most desirable varieties to plant, something that will do well near the salt water? R. G. HANFORD.

Norwalk, Conn.

OWING to pressure upon our columns several articles have been laid over and will appear next week.

AS WE go to press the Executive Committee of the Society of American Florists is in session at Washington. A full report of the proceedings will appear in next issue.

The World's Fair.

The Department of Horticulture desires to have the planting of the various hardy plants completed by May 1, 1892. This applies especially to such trees, shrubs and plants as are included in the appended lists. Intending exhibitors will do well to carefully peruse and note what must necessarily be done.

The department wishes to impress upon all those who desire either to make competitive groups or donate or loan trees, shrubs or plants, that under no circumstances will poorly grown or badly rooted plants be accepted. All material must be better than ordinary nursery stock; in other words, it must be shapely, vigorous and large enough to be effective. For instance, shrubs like Deutzia crenata fl. pl., should be 3 to 4 feet high with 6 to 8 canes. Spirea callosa not less than 20 inches in diameter. Evergreens must also be characteristic.

The plans for this section of the Horticultural Department are now being prepared and will be completed by the 1st of March.

The department will plant and care for all trees, shrubs and plants during the entire season of 1892, providing contributors will give the department full control of the same, as it may be necessary to remove some of the roses, pæonys, etc. immediately after flowering in 1893. In this case many of the plants would not be of any value to transplant in the summer time.

A complete list of all trees, shrubs and plants as are intended to be supplied must be forwarded not later than March 1, 1892.

Plants must be correctly labelled and duplicate invoices sent with each consignment.

LIST OF PLANTS.

Azalea mollis, A. pontica, Berberis canadensis, B. Fortunei, B. Thunbergii, B. vulgaris, B. v. fructa violacea, B. v. purpurea, Colutea arborescens, Cornus mascula variegata, C. elegans variegata, C. Siberica variegata, C. Spæthia, C. variegata, Cercidiphyllum japonicum, Cydonia japonica varieties, Deutzias of all kinds, Diervilla (Weigela), Forsythia, Hibiscus (Althea), Hydrangea, Hypericum, Kerria, Ligustrum, Lonicera (shrubby species), Philadelphus, Prunus, Rhodotypus, Rhus glabra, Sambucus nigra aurea, Spirea, Syringa and Lilac, (these must be strong enough to flower or they will not be acceptable), Xanthoceras sorbifolia.

Acer (Japanese of good size, all kinds), A. dasycarpum heterophyllum laciniatum, A. Wierii, Amygdalus, Cerasus (double flowering), Cercis, Magnolias (providing they have been recently transplanted and have good roots), Prunus, Pyrus malus (ornamental varieties).

CLIMBERS.

Actinidia polygama, Akebia quinata, Ampelopsis Veitchii (large), A. Roylei, Clematis of all kinds, Dolichos japonica, Hedera helix (large plants well rooted) Menispermum, Periploca græca, Wistaria (must be very strong and well rooted).

EVERGREENS.

Fine specimens with good roots and that have been frequently transplanted.

Abies Alcockiana, A. A. nana, A canadensis varieties, A. Douglasi, A. excelsa varieties, A. Maximowiczii, A. Menziesii, A. Morinda, A. nigra, A. n. pumila, A. obovata, A. orientalis, A. polita, A. pungens, Biota orientalis and varieties, Chamaecyparis in variety, Cupressus Lawsoniana and varieties, Juniperus species and varieties, especially prostrate forms, Picea species and varieties, Pinus species and varieties, especially dwarf forms, Retinospora of all species and varieties, Sciadopitys verticillata, Taxus species and varieties, Thuyopsis borealis.

ROSES FOR THE OPEN GROUND.

A most unique and beautifully designed rose garden is now being planned which will accommodate about 50,000 plants, besides large areas of space have been reserved where large groups of roses will be planted.

The rose garden will be of classic design, with temples, arbors, archways and trellises. The great masses, the people, have not had an opportunity to see a typical rose garden. The time has now come and nothing should be left undone to insure a magnificent display.

Rose growers will please read carefully the remarks with regard to trees, shrubs and plants being ready for planting before May, 1892.

It is expected that large and substantial premiums will be offered for roses as well as for all other plants besides the awards that will be made by the United States Commission.

Plants of roses may be either on their roots, budded or grafted. Plants on their own roots may be from not less than 3½-inch pots, of the current year's propagation or they may be one or two year old dormant plants. Well rooted budded plants with the buds dormant will be admitted, thus giving an opportunity for obtaining greater variety.

The above remarks apply to H. P. and other hardy roses. Teas, noisettes and other tender kinds will require different treatment, and it is suggested that strong plants in 5-inch pots be carried over in cold frames, to be planted early in 1893.

Clubs.

What is going to be done about the gathering of the clubs at the next convention? Is it the intention to have another meeting of delegates similar to the one held at Toronto last year? If so, is

it not time now that the matter should be discussed and some sort of a programme arranged? August may seem a long way off to look forward to, but clubs that meet only once a month generally have plenty of business on hand for that one night, so that perhaps it is not too early to begin getting matters into shape if anything is to be done.

Perhaps the S. A. F. Executive Committee might be able to make some suggestions during its session at Washington and set the ball rolling. Or failing a meeting of delegates could not the Executive Committee detail some competent person to read a paper, say on "The management of Gardeners' and Florists' Clubs," during the convention at one of its meetings and have discussion on it after. This is a matter which in my opinion needs more attention than it gets. Many clubs instead of being run by an able president or secretary with business-like system and tact are allowed to run of themselves as best they can. There are many subjects which inexperienced secretaries and even experienced ones would like to have some pointers on. In some clubs I know of the relations between gardener and florist are at present rather strained. Now why in thunder should these relations be strained? Certainly the florist has interests at stake which do not affect the gardener much and vice versa, but I can't for the life of me see why these interests should clash. It is to the interest of both that the whole profession should be elevated and brought more and more before the public and surely both gardener and florist combined can do this better than one of them alone. It seems to me that the interests of the gardener and florist are so interwoven that it is positive damphoolery to try and separate them as some seem to like to do. I suppose no club is without the member who is always talking about "cliques" and "rings" and such like rot. He is a necessary evil that must be tolerated. But can not anything be done with those members who attend the meetings but never say a word until they get back to their potting sheds again, when their tongue is glib enough as they prate about "what ought to have been done" and "what I should have done," etc. etc. Why on earth can't they talk about the good that was done and that might be done, or at least why can't they say what they think at the meeting instead of confiding it all to their cronies outside? Surely there is to be found on this broad continent some one who is conversant enough with the ways of men and of gardeners and florists in particular who can tell us how these difficulties and many others of a like nature can be rectified or at least improved. If there is let him be brought out and tell us all about it.

I trust, Mr. Editor, that you will see fit to use the great influence of the FLORIST to have these matters fully discussed at the next convention. We may hear some unpleasant truths, which I think would do more good than harm and they would help to tone down the large amount of "taffy" of which there has been rather a surfeit on former occasions. These matters are certainly important, because the advancement of horticulture and floriculture depends largely upon the success with which the local club is carried on. E.

YOU WILL certainly want a copy of our new Directory and Reference Book, to be issued this month. The price is $2 and it will be worth many times that to you. Order a copy now.

Grafted Chrysanthemum.

We present herewith an illustration of the grafted chrysanthemum exhibited by Mr. Wm. K. Harris at the chrysanthemum show at Philadelphia last November.

The stock was Puritan and the varieties grafted upon it were: W. H. Lincoln, Cullingfordii, Eva Hoyt, J. C. Heuszey, Irving Clark, President Harrison, L. Canning, Mrs. W. J. Halliday, Robt. Bottomly, Excellent, Ivory, Source d'Or, Mrs. Wm. Bowen, Gold, Advance, Mrs. Geo. Bullock, H. E. Widener, Reward, Snowball, Mrs. Lizzie Cartledge, Eldorado, Jessica, Violet Rose, Miss Minnie Wanamaker and Mrs. John Westcott.

Though bearing 25 varieties all told the flowers of only ten or a dozen were sufficiently developed to show their true character. Among them were Louis Boehmer, Puritan, Mrs. William Bowen, L. Canning, W. H. Lincoln, Miss Eva Hoyt, Mrs. Blanc, Mrs. Alpheus Hardy, Robert Bottomly and a few others.

To the old practitioner in the arts of horticulture there is little or no interest in a grafted plant, but to the young and uninitiated there is something very wonderful in the sight of one plant having a dozen or so distinct varieties in bloom at one time. And as the patrons of flower shows are largely made up of the latter class it is the duty of the framers of schedules to cater to that patronage.

There is not so much necessity for a great number of varieties as it is to have those that are selected well chosen, taking into consideration the time of blooming and the harmonious blending of the colors. These points are of far more importance than the greater number.

Foreign Notes.

At the recent English shows the following chrysanthemums were awarded certificates:

F. W. Flight, (Jap.) crimson; Excelsa, (Jap.) rose; G. C. Schwabe, (Jap.) carmine rose and yellow, 3 certificates; Mrs. Nesbet, (Jap.) purple amaranth; Wm. Turmington, (Jap.) chestnut brown; Mrs. Robinson King, (incurved) golden yellow, 6 certificates; Edwin Becket, (Jap.) golden yellow; Mrs. Edwin Becket, (Jap.) white; Beauty of Castlehill, (Jap.) yellow; Mrs. G. C. Schwabe, (Jap.) blush; William Lane, (Jap.) bright salmon bronze, 2 certificates; Duchess of Westminster, (anemone) rosy bronze, 2 certificates; M. R. Bahuant, (incurved) carmine rose; Mme. Darrier, (incurved) yellow; Robert Cannell, (incurved) chestnut red; Alberic Lunden, (Jap.) brilliant carmine; Bouquet de Dame, (Jap.) white, early; Lizzie Cartledge, (Jap.) Mermet pink; A. H. Neve, (Jap.) silvery blush, 2 certificates; R. C. Kingston, (Jap.) dark purple; Wm. Tricker, (Jap.) delicate rose; Delaware, (anemone) white and pale yellow; Geo. Hawkins, (anemone) golden yellow; Mme. Edward Lefort, (Pomp.) golden yellow, early; Mme. A. Colmiche, (Pomp.) crimson tipped gold, early; M. Jules Paquet, (Pomp.) silvery white, early; Viscount Clicquot, (Pomp.) brick red, early; Vice-President Hardy, (Jap.) golden yellow, early; Viscountess Hambleden (Inc. Jap.) silvery blush; Robert Owen, (Jap.) bronzy gold. S.

Good News.

The intimation in the FLORIST, page 424, that *no flat arrangement of cut flowers will be allowed* at the chrysanthemum show to be held in New York next November, is really good news. And its announcement so soon is a timely suggestion to other cities to adopt the same progressive stand. The splendid appearance of the flowers with long, stout, leafy stems, as compared with the naked blossom heads spread out flat on the regulation exhibition green boards or stands, was, at our last exhibition, irresistible, and the charm of the former over the latter was emphasized by tyro and connoisseur alike. The flat boards must go —away with them.

Another bit of good news in the same article is the edict against *dirty pots*. Truly this was needed. We don't pretend to have the pots in our greenhouses kept washed. But when we bring forth the best fruits of our cultural skill to display them at a public competitive exhibition, out of respect to ourselves as well as to the public we cater to and which pays its hard cash for the privilege of looking at our plants, we should at least present them in clean pots. Decency demands that when we ourselves visit the flower show we shall do so with clean shoes as well as clean faces; it is no more unreasonable to demand that the pots which encase the roots of the plants we send, to the flower show should be as clean as the faces of the plants. It is generally expected that a florist, from the very nature of his calling, is a person of refined taste and neatness; do dirty pots substantiate this good opinion? They don't. In fact the dirty pots at a public horticultural exhibition is a pretty fair indication of the get-up of the party who exhibits them. Away with them.

And the good news continues—"soap boxes and other abominations * * * will be unconditionally sat down upon." At our agricultural fairs and county shows where the premiums for plants are quite small and amateurs mostly the exhibitors, old tin cans, broken tea pots and all manner of such like make-shift vessels are sometimes used as flower pots, and with perfect propriety; all we ask in these cases is that the vessels shall be neat and clean and the plants grown in them worthy of merit. But in a metropolitan exhibition where the premium list aggregates thousands of dollars and the individual premiums for plants run from $10 to $200 a piece, there is no excuse for such aboriginal flower pots, "soap boxes and other abominations," and especially is this so when we have nearly a year's notice before the exhibition takes place.

The Florists' Clubs—Excelsior!

WM. FALCONER.

Advertising Flower Shows.

The very able article on this subject in issue of November 26, by Mr. G. C. Watson, contains many points of interest to all of us and I am led to give my experience in hopes that this subject will be more thoroughly discussed.

Although our flower show has not been conducted under the auspices of a society or club, we have conducted our annual

GRAFTED CHRYSANTHEMUM.

shows with aim and ambition to make them something more than a mere "trade display." Our last year's show was described at some length with photo engravings in the AMERICAN FLORIST of December 4, 1890. This engraving of views taken of the show we used on one side of a circular, size 7½x10, which was our principal mode of advertising, as we had 5,000 of them. Under the engraving we had in large plain type "Chaapel's flower show and chrysanthemum exhibition every day and evening, Nov. 11—14 inclusive, at Williamsport, Pa." On the other side of this circular, which was printed on fine plate paper to fully develop the engraving, we described briefly the main features of last year's show and invited the public to attend the exhibition, and down in the lower corner we stated that the admission would be 10 cents or an admission coupon for 25 cents, which would entitle the holder to admission and its full face value in chrysanthemum flowers. Last year the admission was free and the attendance was about all we could manage; this year the attendance was somewhat larger. We sold about equal numbers of 10 cent and 25 cent admissions, so you can judge we had to "hustle" to wait on the 25 cent coupon orders for chrysanthemums, but we are well satisfied with the results and know that many thousands of chrysanthemum flowers have been distributed in the homes of our city.

We also used in advertising the show 5,000 slips of suitable size to go in an ordinary envelope announcing the show. These we commenced using about a month before the date of the show. 3,000 cards of invitation to the ladies were issued announcing the opening of the show in the afternoon of the first day, with music by the Stopper & Fisk orchestra. Twenty-five of the lithographs issued by the Courier Co., Buffalo, N. Y., were distributed in the windows of our most prominent stores. Our newspapers gave us some very readable articles, though our patronage was limited to a few short notices in their local news columns. This with the 5,000 photo engraving circulars was the extent of our advertising.

In addition to our showing a choice assortment of flowers, such as we handle regularly, we displayed great bunches of American Beauty and other choice roses, vases of chrysanthemums of enormous size and a number of delicate sprays of orchids.

I might say in conclusion that the show was held at our flower store and greenhouses. The store is about 85 feet long and opening from this are four large houses filled with chrysanthemums, palms, etc., and brilliantly lighted by arc electric lights. HARRY CHAAPEL.

THE Cincinnati Florists' Society has already issued an advance premium list for a chrysanthemum show next November. Copies may be obtained on application to the secretary, Mr. E. G. Gillett, 134 Walnut St., Cincinnati, O.

WE AGAIN hear of cases of poisoning from Primula obconica. Do any of our readers know what is best to apply to the affected parts when stung by this primula?

THERE SHOULD BE a new premium for best 25 blooms for cut flower uses, 25 varieties.

Cyclamens at Rob't Craig's.

Few flowers respond with such a generous profusion of bloom to moderate care in culture as does the cyclamen. This fact was again forcibly impressed on the writer last Sunday afternoon as he took a peep at the magnificent houseful of them, which are now in full bloom at Mr. Craig's establishment. They were a sight worth going a long journey to see. Both sides of the house were packed full of splendidly grown plants, some of them in sixes, but most of them in eights, wonderfully clean, bright and healthy—full of flowers and finely diversified in color. The cyclamen flowers have a clean, smiling, inviting coolness about them, like a glint of English sunshine after a week's rain and a mass of them spread out in a long perspective like this house of Robert Craig's gives one a thrill of keen pleasure to look upon. Mr. Smith (Mr. Craig's foreman) deserves credit for this house. Not even at Davy Allan's or Bill Martin's (glorious fellows as they are at cyclamens) are better grown plants to be seen. A great many batches on the benches were marked "sold," and Mr. Smith said they only wished they had had three houses of them instead of one.

Mr. Craig has already got his seed sown for next winter's and spring's flowering, some 4 or 5 thousand being already up and pricked off into thumbs. In sowing the seeds ordinary flat seed boxes are used. The soil is of a light nature and the seeds are sown directly on the surface and pressed gently in and then lightly covered. Mr. Allan used to recommend steeping the seed in tepid water a short time previous to sowing to aid quick germination and detect any immature seeds. Some growers prick off 5 or 6 of the seedlings in a 6-inch pot, but Mr. Smith prefers them singly. They are grown on in a temperature of about 55° till they can be put out in the frames during summer. Great care is exercised in giving the plants plenty of air. Repotting into fives is done about July. It used to be common to keep the dormant bulbs over for the second year, but the large growers now prefer fresh stock from seed every year. Mr. Craig's plants now in flower are the giganteum strain from Williams. There were a good many of what seemed to the writer to be the grandiflorum type of the French among them and these are not so graceful in habit and are broader in the flower and not so deep as the giganteum. The Williams strain the writer believes is now surpassed by that of more than one of the larger growers for the Covent Garden market.

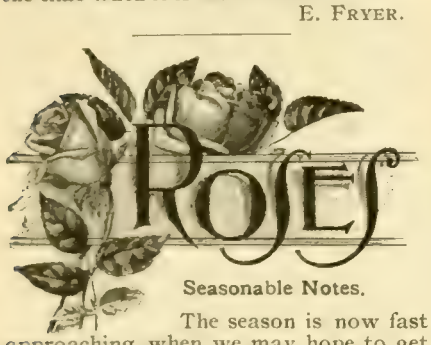
January 3. G. C. W.

White Lilies all the Year Round.

For two seasons past the writer has succeeded in having a summer supply of Harrisii lilies by planting out the bulbs that have bloomed in the house, the first lots being planted in a cold frame or pit so they can be covered with sash in case of late cold. Of course they are turned out of the pots, planted in good ground and as growth advances receive a good supply of water. Later successive lots are planted out in a pear orchard where they can be reached with a hose in a dry time in the summer. The partial shade afforded by the trees seems useful in preserving the flowers from strong sunshine.

The supply was steady. I don't think we were a whole week at any time during the spring and summer months without Harrisii lily flowers ready to cut. The last blooms opened in the house the 15th of October having to be taken in two

weeks previously to save them from frost.



A large bed of L. lancifolium album affords a supplementary supply in September, lasting about a month, but the greenish tinge of this lily makes it much inferior to Harrisii for any kind of cut flower work.

In order, however, to have the best results with Harrisii I think a good quality of bulb is necessary. A 7 to 9-inch bulb properly handled has more vitality than a smaller one and will produce accordingly: larger bulbs still better.

Thus it will be seen how easy it is to have white lilies all the year round, the old but still useful calla filling up the gap in the winter months till Harrisii begins again.

This method may not be as useful to the big grower as to the small or retail grower who handles only from 500 to 1,000 bulbs. To those who have not tried it I say, don't waste your bulbs. Give this plan a fair trial and you will be satisfied with results. The only cause of failure will be a scant supply of water at the time when it is most needed.

E. FRYER.

Seasonable Notes.

The season is now fast approaching when we may hope to get more and brighter sunshine than we have had during some parts of December at least, and as the plants will be increasing in size so will their feeding abilities increase. Where they are healthy and growing freely they can from this on be treated to a little liquid manure, but it is much safer to have it a little too weak rather than too strong, particularly thus early in the season. A fair proportion would be about a 12-inch pot full of fresh cow manure to 50 gallons of water. Let it be well stirred up and allowed to settle at least 30 to 36 hours before using. For other manures a somewhat larger or smaller quantity, for instance, with horse manure a somewhat larger proportion will be beneficial, while if sheep or chicken manure is to be used a much smaller quantity will answer the same purpose.

Continue to keep all dead leaves, weeds, etc. removed and occasionally rub the surface of the soil over to keep it healthy and allow air to pass freely through it; and where the mulching put on some time since has become nearly or quite absorbed by the roots another thin mulching should be put on, but it is certainly much safer to apply it not more than an average of half to three quarters of an inch thick than to put on a heavier dressing at one time.

Watering, syringing, etc. will now begin to call for closer attention than during dull cloudy weather, because if neglected red spider and its kindred evils will begin to show itself and if once allowed to get a foothold will be very hard to check. Give all the air possible on every favorable occasion, and do not let the night temperatures exceed 56° except on very mild nights, but with an abundance of air on during the day the temperature may be allowed to run up to 80° without causing any trouble whatever, but it should never exceed 66° or 68° without air being put on, otherwise the color of the flowers suffers and the growths will be proportionately weak.

For hybrids required to start from now till March it will take from 12 to 14 weeks to get them into bloom. For such varieties as Jacqueminot, Magna Charta and other early or medium early blooming varieties, 12 weeks will generally produce fine flowers, but such varieties as Baroness, etc., will require 14 weeks to produce really fine flowers; after the middle of March they will come in in a week to ten days less time.

Where growers contemplate raising their own stock for next season they should now prepare the propagating beds for same, and select only good clean healthy wood for cuttings and never cut a plant so hard as to weaken its growth, otherwise the result will be very detrimental to the following crops. Do not attempt to root rose cuttings in a much higher temperature than that in which they have been growing, otherwise you will get weak plants which will take months to grow into healthy vigorous stock.

JOHN N. MAY.

NEW ROSE THE HUGH.—A new rose, which originated with Mr. Frank L. Moore, Chatham, N. J., and which he has christened "The Hugh," is a sport from the Mermet. It is deeper in color than the Mermet and is said to retain its color in the darkest winter weather. It will, we understand, be introduced to commerce some time this year.

Begonia Fulgens.

Here comes Lemoine at us again with another sweet scented begonia, and judging from the description of its bright colored sweet scented flowers borne erect, dwarf, spreading compact habit, long duration of flowering season, make this a very desirable plant to say nothing of its probable usefulness to the hybridizer.

I give you M. Lemoine's description. "The plant was found with B. Baumanni in the mountainous regions of Bolivia near the Peruvian frontier not far from the place where B. Davisi grows in abundance. It is a tuberous species with leaves of medium size, orbiculate, sea green and in their early development covered with a rose colored down that gives them a velvety appearance. The main stalks are rather short, giving the plant a semblance of producing the flower stems directly from the tuber, forming a low compact plant with a large number of erect flower stalks. The peduncles are bronze-red, each bearing from 5 to 10 flowers, erect and rising about 8 inches above leaves. The pistillate flowers are about three inches in diameter and have four petals of a brilliant raspberry-red much deeper on the borders. The staminate flowers are more numerous and higher colored having five or six petals. During the morning the flowers give out a delicate perfume resembling the odor of the tea rose. This is an extremely floriferous plant of dwarfish spreading habit throwing up a succession of erect flower stems. It continues to flower through the summer until the frost comes and its brilliant masses of dazzling red are impossible to describe."

F. J. MEECH.

Removing Old Bulbs from Orchids.

In reply to H. E. S. regarding the removal of old bulbs from orchids, I never remove old healthy bulbs unless from such varieties as cœlogynes, etc., when overcrowding. As for dendrobiums, they are left on as long as healthy unless a few bulbs are wanted for propagation. G. McW.

Carnation Notes.

I send a few notes on my experience with carnations.

Last year I tried thirty varieties and selected from the lot those giving the best results. I am now flowering 4,000 plants of the following varieties: Hinze's White, Silver Spray, Lizzie McGowan, Portia, Philadelphia, Alegatiere, Grace Wilder, Century, Fred Creighton, Anna Webb, Lamborn and Louise Porsch. Their relative merits and requirements as they appear here are as follows:

Propagating: To insure good results before the holidays Hinze's White should be struck at least five or six weeks earlier than any others in order to have them in at the same time; Century about three weeks earlier than the others. I have some Silver Sprays, Alegatieres and Philadelphias doing nicely that were taken from the sand and dibbled out where they were to grow during the summer, and I judge Lizzie McGowan would do about the same. Of course I do not recommend doing this.

Soil: Hinze's White does best in a heavy soil, Century in a very light soil, and the others in a soil of medium weight.

Temperature: Hinze's White and Philadelphia do best in nearly a rose heat. Alegatiere requires the coolest treatment of all.

Water: Alegatiere and Philadelphia require much the most; Century and Wilder the least.

Productiveness: In whites, from September to July I place Hinze's White first, but for best results to February 1 I rely on Silver Spray, Lizzie McGowan and Lamborn; about equal thus far; can give results better later on. In reds, Alegatiere gives me the best results, with Portia and Philadelphia nearly equal. In pinks, Wilder stands first and Fred. Creighton second. For a dark one I still cling to Anna Webb. In yellows, Louise Porsch.

Later will give you the number of flowers cut each month from each variety, from the record I am keeping.

W. D. LANE.

WHO WOULD have thought that there were as many as 300 varieties of carnations in commerce in America. Still that is the number in the list of carnations now being put into type for our new directory and reference book. We believe this list will be of very great value. In nearly every case, in addition to a brief description we give the year of introduction, which adds very materially to the value of the list for reference. Much of the work of compilation was done by Mr. Edwin Lonsdale, while Mr. John Thorpe gave invaluable assistance in supplying many of the dates at which the varieties were introduced to commerce. And what a walking reference book Mr. Thorpe is! Many of the carnations listed are his own seedlings and it is not surprising that he should recollect the year in which they were introduced, but that he should be able to recall with nearly equal facility the dates at which all other seedlings of promise were introduced shows how

THE UMBRELLA TREE.

closely he has watched events in this field and how retentive a memory he has for all matters connected with floriculture.

The Umbrella Tree.

Our illustration represents a very beautiful specimen of the Umbrella China Tree (Melia Azedarach var. umbraculifera).

The China tree, or Pride of India, as it is sometimes called, is a common shade tree in the southern states, especially in towns and cities, and it also is widely grown in the West Indies and southern Europe. As its name implies it is of Asiatic origin, but it now is widely naturalized wherever grown in this country. It is not hardy in the northern states.

It belongs to the same family of plants as does the mahogany and although not a tree of great proportions, seldom attaining a height of more than 40 feet, it is very fast growing and it is easily raised from seed. The common China tree has rather an open habit, but the form here illustrated and known as the Umbrella China tree has an exceedingly dense head and not only is it the most desirable of all melias as a shade tree, but one of the best shade trees of any kind. It originated in Texas and is often known as the Texas Umbrella tree.

Apart from these melias being fine shade trees they are exceedingly free blooming, bearing large panicles of fragrant lilac colored flowers early in spring. One variety in particular, namely, floribunda, is highly desirable for its flowers. It is of somewhat dwarf, compact form and its flowers are larger and whiter than those of the common China tree and it blooms when quite small, indeed it is often grown as a pot plant in northern conservatories, where its delightfully fragrant flowers are much esteemed. They are of no use for cutting, however, as they wilt so soon after being severed from the plants.

The foliage is smooth, deep green, twice pinnate, ovate and pointed toothed leaflets and is quite suggestive of the leaves of Kœlreuteria paniculata.

Boston.

The January meeting of the Gardeners' and Florists' Club was very fully attended, it having been announced that Prof. G. L. Goodale, of Harvard Botanic Garden, would speak to the club on that evening. It was therefore a great disappointment when at the opening of the meeting it was learned that Prof. Goodale was unable to be present, on account of sickness. He had, however, provided a substitute in the person of Prof. W. F. Ganong, an instructor in botany at Harvard University and pupil of Prof. Goodale, who had kindly consented to address the club on the subject of "Hybridization and Selection."

Prof. Ganong gave a most interesting talk and held the attention of his audience closely all through. His lecture showed him to be a student thoroughly devoted to his chosen line of study. He began by disclaiming any pretense to knowledge acquired from practical experience and confined his remarks throughout to a presentation of the different opinions held by leading botanical authorities on the subject of variations and the utilization of variations in the vegetable world, the difficulties which are constantly met in experimenting on these lines and the results which it is hoped to accomplish eventually.

Cultivation he described as: first, keeping away from a plant its natural enemies; second, supplying necessary light, space and food; third, and most important, the utilization of variations. The horticulturist attempts to put a plant under the most favorable conditions for development. As a rule plants in nature are not under the best conditions. They are not always in the most favorable situation and are under the strain of constant competition with their own and other species.

Variations he classed under three heads. First, normal; second, true monstrosities, which as a rule can not be perpetuated; third, variations known as sports and which as a rule can be perpetuated.

Speaking of normal variations he said that no botanist doubts that every species is developed or evolved from pre-existing species. This evolution has been brought about mainly by the selection of varieties, but the exact nature of this selection is not known. Whether definite variations, that is, the unlikeness of parent and offspring, have a tendency to move in certain fixed lines or are accidental and occur in all directions are questions which have within a few years been actively discussed and received increased attention from scientists and botanists, and experiments are being carried on extensively all the time.

What is the influence of surroundings and environment; does the plant under certain conditions show a tendency to fit itself into those particular surroundings, transmitting to its offspring directly the character thus acquired, or do the variations occur accidentally with the result

that those varieties better fitted to the surroundings are preserved and those not fitted to the surroundings are thrown away? The investigations and experiments on these problems which are now being actively prosecuted in this country and in Europe can not fail to bring results in a few years which will be of primary importance in the improvement of cultivation.

On the subject of fertilization Prof. Ganong said that most plants can not exist many years in perfect health without an occasional cross. Within the limits of a given species crosses between the more widely differing varieties give healthier and better results. In some cases crosses are obtained between species and on rare occasions between distinct genera. Species is the result in nature of the intense struggle to survive made necessary by the long competition with other forms.

Referring to the frequent difficulty in determining species he stated that the only real test botanists have to determine species is the ability of the plants to cross. If they will not cross they as a rule belong to different species. Theoretically, the offspring of two varieties in the same species will be fertile, but the offspring from two different species will be barren. In the offspring the tendency is to reproduce equally the character of both parents, but the process is interfered with to a great extent. The wide range of variations in offspring gives the gardener and nature something to work on. Crossing should be done between forms as greatly separated as possible, but not so widely separated as to prevent fertility.

In reply to a question by Mr. Dawson as to whether the pollen plant or the seed parent had the greatest power over the cross, Prof. Ganong replied that the whole question of the transmission of character is still in a very unsettled state.

A vote of thanks was tendered to the lecturer.

A communication from the New York Florists' Club inviting the members of the Boston Club to attend their annual supper on January 11, was read by the secretary and a vote of thanks was extended to the New York Club for their courtesy.

At the opening meeting for the season of the Mass. Horticultural Society President Spooner read his annual address, which showed the society to be in excellent condition financially and otherwise and the various departments working together harmoniously. The most radical recommendations in his address were suggestions to the effect that the Rhododendron show which has been a free exhibition hitherto should be made of more importance and admittance charged; that the rose and strawberry show be made a free exhibition and that the annual exhibition of flowers and plants in September be made a free exhibition and of less magnitude than heretofore.

The profits on the chrysanthemum show aggregated more than the profits on all the other shows of the year combined and the only exhibition that showed a deficit as between receipts and operating expenses was the fruit and vegetable show in the fall.

Bearing the above in mind it is a somewhat peculiar fact that in the list of essays for the coming season which has just appeared no provision has been made for the presentation of any floral or kindred subject excepting one assignment late in the season, viz.: "The Ethics of Flowers," by Mrs. F. A. Deane of Edgartown. Two dates have been left blank and possibly those may be filled later by something to indicate that the society still recognizes floriculture as a department of its work. Perhaps the committee entrusted with the work of providing essayists has reached the limit of its resources. If so a new committee would be the proper move. The list of subjects as it now stands is as follows: "The System of Irrigation of the Nile Valley," "The New Orcharding," "Insects Injurious to Fruit," "Irrigation with Fresh Sewage," "Road Making and Maintenance," "Fruits to Preserve and How to Preserve Them," "Arbor Day in Schools," "The Effects of Heat" and "The Ethics of Flowers."

At the meeting of the society on Jan. 2 in response to communications from Chief Samuels of the Hort. Dep't of the World's Columbian Exposition a committee was appointed to take into consideration the subject of collective exhibits in that department. The report of that committee will be awaited with interest. The Massachusetts State Board of Managers has applied to the Chief of Horticulture at Chicago for 4,000 feet of space inside the Horticultural Hall and for 2,000 feet outside.

An effort will be made to have the amount of the state appropriation increased.

Thos. Greaves, gardener to E. W. Gilmore, North Easton, has a new variety of Cypripedium insigne which is very distinct and beautiful. The dorsal sepal is very large, beautifully undulated on the edge and margined with white all around. The brown markings are of a peculiar shade and are larger and more abundant than in any other variety and the violet markings on the white ground are also very distinct. The petals are prettily edged with yellow. The variety has been named Greavesiana and as such received a certificate of merit from the Mass. Hort. Society on Jan. 9. On the same date Mr. C. M. Atkinson exhibited a superb specimen plant of Cattleya Percivalliana bearing 42 blooms, for which he received a silver medal.

New York.

Roses, carnations, valley, hyacinths, in fact everything, is coming in more plentiful every day, but trade is quiet.

There have been several notable parties during the past week. The leading event was the wedding of Mrs. Marshall O. Roberts. The church was profusely decorated by Hodgson. At each end of the altar were masses of palms. Immediately in front of the chancel three large arches were raised, made of green, with large quantities of Watteville and Cusin roses. From the center of each arch drooped bunches of American Beauties. On the center of the marble altar was a mound of lily of the valley, flanked with pyramids of Bride roses. Overhead there were festoons of laurel.

At Mrs. Stuart's funeral on Monday, January 4, the arrangement of flowers by S. J. Burnham & Co. was exquisitely done. On each side of the door leading to the parlor was a large vase of orchids, a bowl of American Beauties was placed on the mantel, and large vases of callas filled the corners of the room. There were also some bowls of Cusin and Bride roses on tables and cabinets, the whole effect being very pleasing and appropriate, and a welcome change from the collections of designs usually seen on such occasions.

The floral decorations at the ladies' reception given by the Montauk Club at Brooklyn, on January 6, were under the supervision of John Condon. The decorations were very extensive and elaborate, the whole house from top to bottom being ornamented with flowers, vines and plants in great profusion.

The University of the City of New York and other scientific colleges in this vicinity are opposed to the plan whereby Columbia College would wield almost the entire control of the proposed Botanical Garden at Bronx Park. These other institutions all desire a representation in the board of management and to this effect will press an amendment in the state legislature to the act of last year providing for the establishment of the garden.

On new Years eve the employes of Mr. J. N. May, at Summit, N. J., went in a body to his office and there presented him with a very handsome ebony cane with a heavy gold head and his initials engraved thereon. It was a complete surprise to Mr. May, but he found the right words in which to express his thanks and was cheered to the echo. Those who know the very cordial relations existing between Mr. May and his men and his unselfish efforts for their mental and moral welfare at all times will all agree that no testimonial of the kind was ever more richly deserved or more heartily tendered.

Mr. J. McD. Gamewell of Hackensack is very low with pneumonia.

St. Louis.

We are experiencing the dull time that usually follows the holidays. The retail cut flower trade remains good, with prices as follows: La France, Mermets, Albanys, Brides, $3 per dozen; Perles, Niphetos, $1.50; Bon Silenes, $1; Wootons, Gontiers, $2; Beauties, $12; carnations, Romans, bouvardia, heliotrope, valley, freesia, paper whites, $1; camellias, mignonette, $2; violets 75 per 100. The above is for first class stuff. There is a continuous call for set work.

Mr. Waldbart, as most of the St. Louis florists know, goes in quite extensively for decorative plants. His long experience verifies that of others, in condemning many variegated foliage plants, when such are needed in places and under circumstances calculated to try their hardiness and susceptibility to rough treatment. In regard to bedding geraniums for this section, Mr. Waldbart recommends Marie Hill for pink, White Swan for white, and of course the old standby Queen of the West for general purposes, but thinks that Glory of St. Louis will finally supersede this old favorite, on account of the darker and more pleasing color of the flower.

Dracæna fragrans var. Lindeni is a grand decorative plant, but must not be kept too warm, for it is apt to temporarily lose its variegation if kept growing too rapidly.

A large plant of Acokanthera spectabilis (Toxicophlœa spectabilis) is in blossom at the Missouri Botanical Garden. This is the plant commonly known as wintersweet, and is a native of South Africa. Its bark is very poisonous. There are some points about it, however, that make it a very desirable plant, and worthy a place in every collection. Said points are as follows: First, it is a very free bloomer; second, the pure white flowers are in large compact clusters; third, the plant continues in blossom for a long time and at a season of the year when such flowers are very acceptable; fourth, the perfume is delightful and very strong;

fifth, the plant is easy to keep and propagate.

Other specimens now in blossom and worthy of notice are those of Astrapæa Wallichii, a native of Madagascar. When in full flower these plants, as we have them at the Garden, make a grand sight. They are usually in flower at Christmas with us, but this year are a little late. A plentiful supply of water must be given to insure success. Cuttings of young wood may be propagated in sand during April with heat. J. W. D.

Pittsburg.

Everybody was busy during the holidays; on the 23d and 24th there were not enough hours to do the work in. Flowers were in fair supply and everything sold. The express service was good on the railroads and flowers were promptly delivered, a great relief to the poor florists. Prices were a shade lower than the previous year, and flowers of better quality. In dollars and cents the increase over 1890 was probably 25 per cent. Loose flowers had the call. Holly sold remarkably well, also laurel and lycopodium wreathing. Churches were generally decorated, plants, evergreens and flowers being used as the taste of each committee suggested.

New Years developed an active demand, but nothing in comparison with Christmas. In this connection it would doubtless benefit your professional readers to have the views of some experienced hand as to the best system or plan for handling the extraordinary rush of orders at Christmas and Easter especially, to secure the proper care and handling of the flowers when received, their packing and delivery, with best plan to avoid neglect or oversight of orders received, etc.

Since the 1st trade has been steady and good, although no very large orders are floating around. M.

Trade at Christmas was very good, as every florist disposed of his stock. Harrisii lilies were plentiful and it seems every grower had a crop of them in bloom for the holidays. New Years trade was quite brisk and somewhat better than last year.

In the reports of our show published in your paper a matter was overlooked which I would like to see rectified. Ernst Ludwig, a member of the Florists' Club, received honorable mention for his exhibition of long stemmed chrysanthemums, which were the best blooms exhibited, but were not awarded any premium, as they were not entered, not being grown by him.

The club is making wonderful progress socially and particularly financially, as we have $1,000 in the treasury, a good showing for one year's existence. At the next meeting, Jan. 12, nomination of officers for this year takes place.

E. C. REINEMAN.

Cincinnati.

Jan. 9 being the night for the annual meeting and election of officers for the coming year of the Cincinnati Florists' Society caused the meeting to be a good one. The secretary made his report for the year and will say that we have made progress. Several new members have been added to the ranks and many good and useful papers have been read before the society. In my last report I failed to state that at our December meeting Mr. Theodore Bock of Hamilton, O., who is a member of the society, favored us with a paper entitled "Dieffenbachia Bausei." We, like all other societies, have lost some members, but shall try very hard during the coming year to get others to fill their places.

The following is a list of the officers elected for 1892: Pres't, Geo. Corbett, College Hill; 1st Vice-Pres't, John Rose, Rosebank; 2d Vice-Pres't, J. A. Peterson; Treas., R. Witterstaetter, Sedamsville; Sec'y, E. G. Gillett; executive committee, Fred Walz, R. J. Murphy and Wm. Bolia. Very little change was made, with the exception of vice-presidents.

After the election the coming chrysanthemum show was discussed at length and it now looks as if we would have no trouble in giving the citizens of Cincinnati and surrounding cities an opportunity to witness a grand enterprise, one that we shall feel proud of. Each and every member seems to be willing to put his shoulder to the wheel and help push this show to an overwhelming success. We already have our preliminary premium list and will mail a sample copy to any of our florist friends wishing same. Address all communications to E. G. Gillett, Sec'y, 134 Walnut street, Cincinnati, O.

The trade on cut flowers for the past week in our retail stores has been rather quiet. Wholesale trade has been good and the supply almost equal to the demand. Am. Beauties, Perles and carnations have been scarce and it will be at least two weeks before we shall have a supply of these flowers.

One of our florists has the contract for decorating a portion of Music Hall for "The Charity Ball" which will be given the latter part of this month and which promises to be the swell ball of the season. This will undoubtedly create a demand for flowers. E. G. GILLETT.

Chicago.

At the quarterly meeting of the Horticultural Society of Chicago last Saturday it was decided to go ahead with the spring exhibition if sufficient funds are secured to make up a satisfactory prize list. The proposal is to give the exhibition in the new conservatory at Lincoln Park and as no admission fee can be charged there will be no income. But certain gentlemen have signified their willingness to supply a share of the cash and everything now depends upon whether enough other liberal minded men can be found to make up a sufficient sum. It is estimated that $1,500 would probably be sufficient and that $2,000 would certainly be ample. It was the opinion of those who are in a position to know that while as satisfactory a display could not be made as would be possible with more time for preparation, still a really creditable show could be made from stock already in hand, and that it would be wise to make the attempt. It was also felt that the projected show would pave the way for annual spring exhibitions.

A very interesting feature of the meeting was an essay upon the pronunciation of botanical names by Mr. H. H. Hindshaw. He commended the pronouncing dictionary in the supplement to Nicholson's "Dictionary of Gardening" as a standard. Quite a discussion regarding the pronunciation of certain names followed the reading of the essay, during which there was considerable good natured badinage.

Eleven applicants were elected to membership in the society and a great deal of interest is being awakened among the amateurs of the city. Among those elected at this meeting was Mr. John Thorpe, Chief of the Floricultural Department of the World's Fair.

Toronto.

After the Christmas and New Years boom things appear to be a little dull and probably they are more or less so with different people; the cause is laid down to the want of sleighing (we are never at a loss for a cause for grumbling). Perhaps someone will wonder what that has to do with a florist's business. Well, good sleighing enables the farmers to get their grain to market, they come to the city with their families and pay off their back debts and spend more besides, the money circulates, people feel better and more inclined to indulge in luxuries. The lover sends a box of flowers to his onliest only one, the dude wants a bouttoniere at the opera, the matron treats herself to a plant or two for the dinner table or window, etc. And sleighing has arrived at last, there having been a considerable downfall of snow the last few day and the mercury in the thermometer is low withal.

In revising the constitution of the club the executive committee are examining the constitutions of 7 or 8 other clubs and have culled from them and their own all the points considered best and most suitable. The result promises to be an exceptionally clear, concise and workable set of articles. The New York club are to be complimented on their constitution and that was taken as a basis. I think when the committee get through that the Toronto club will have a model that other clubs would do well to copy.

Mr. J. H. Dunlop leaves for Washington on the 10th. He will take in the annual dinner of the New York club on his way.

Milwaukee.

Flowers are scarce, especially white. Prices remain high. The supply does not equal the demand and orders are constantly refused. A Chicago firm has raised a rumpus by circulating a price list quoting flowers at summer rates, a strange freak the object of which is difficult to understand. Violets are quite scarce. Freesias and daffodils have made their appearance, also some fine Harrisii lilies, the latter seem to be crowding the calla out of market. Good carnations sell well and the supply is not what it should be. Milwaukee is exceptionally weak on this flower.

Ben Gregory had a narrow escape from fire, losing a new barn and some valuable contents. One side of greenhouse and dwelling were scorched, but on the whole he was fortunate not to have lost more. Building was insured. The Florist Club is making preparations for its annual ball, February 9. Geo. W. Ringrose and family leave September 1 for a six months trip through Europe. Wm. Edleisen leaves for Germany about the same time.

WE HAVE ADDED two more new features to our forthcoming trade directory and reference book. They are lists of leading Park and Cemetery Superintendents of America. We believe that these lists will be a great convenience to the trade in many ways. We shall also give a list of Botanic Gardens in America.

WHEN writing to advertisers please mention the fact that you were induced to write by the advertisement in the AMERICAN FLORIST. You will benefit us by letting advertisers know that it is the FLORIST that is bringing them trade.

OBITUARY.

JAMES TAPLIN died at his home in Maywood, N. J., last Saturday night, of pneumonia. Mr. Taplin has long been widely known as a plantsman of rare ability and the news of his death will be received with sorrow by a host of friends on both sides of the Atlantic.

We are indebted to Mr. John Thorpe for the following regarding Mr. Taplin's life:

"James Taplin was born at Ludlow in Shropshire, England, his father being gardener at the famous Ludlow Castle at the time. I remember his father saying many years ago that James was a gardener born and bred, as he has since so faithfully exemplified.

"He left home early and passed from place to place, in the best schools of horticulture, and there is no branch, whether fruit, flowers, vegetables or plants, in which he did not excel. After such an education he occupied the very highest pinnacle, as gardener to the Duke of Devonshire at the famous Chatsworth, and he filled the position with satisfaction and credit.

"As an exhibitor of plants and fruits in the palmy days of the Royal Hort. Society his achievements were such that the society voted him their highest medal for the good work he had done.

"It was at Chatsworth Mr. George Such first met him and from there he came to South Amboy, N. J. This brings us to the famous collection of plants there brought together, a collection that was heralded from end to end of the country as unique, not only in variety but as a masterpiece of cultivation.

"The magnificent display of plants made by Mr. Such at the Centennial at Philadelphia, Mr. W. Robinson says, saved the Horticultural Department from ignominy.

"Mr. Taplin bought the property at Maywood about 14 years ago, since which time he has given further evidence of his talents. The many fine exhibitions made by him in New York are still fresh in the memories of us all. He was a correspondent of the English *Garden* and *Gardeners' Chronicle*. Everybody knew him as a good companion and many as the truest of friends. He leaves a widow, two sons and two daughters."

Both sons are known to our readers as regular correspondents of the FLORIST, and his daughter, Mrs. Emily Taplin Royle, was for several years our New York correspondent.

News Notes.

MADISON, N. J.—Mr. J. Callahan succeeds Mr. L. G. Forbes as foreman for Mr. W. P. Wight.

BROOKLYN, N. Y.—Julius J. Heinrich, of 121 Court street, has made an assignment to Wm. T. Lee.

DOVER, N. H.—Chas. L. Howe has in process of erection at present a range of about 4,000 feet of glass.

TOUGHKENAMON, PA.—Isaac Larkin has been confined to the house with the grip for the past two weeks.

NYACK, N. Y.—The past summer A. Deloit built two 100-foot rose houses and two 90-foot violet houses.

LITTLE ROCK, ARK.—The annual meeting of the Arkansas State Hort. Society will be held in this city Jan. 20.

HIAWATHA, KANS.—Margrave & Ward added two new houses the past season, one 48x20 and the other 50x16.

FLINT, MICH.—D. P. Smith has succeeded Smith & Evans, and catalogues should be addressed to the former only.

LOS ANGELES, CAL.—Macleod & Denham have succeeded the Macleod Seed and Produce Co. at 245 South Main St.

MONTCLAIR, N. J.—The Chesney Flower Company has succeeded Mr. Robert Chesney, and will conduct business on Bloomfield avenue.

ERIE, PA.—Henry A. Niemeyer has built three new houses, of which two are 100x22 each and one 100x10. Wm. Niemeyer has opened a new store down town.

SAN JOSE, CAL.—The Standard Nursery Co. has been incorporated with a capital stock of $50,000. The directors for the first year are F. F. Briton, J. E. Boynton, W. G. Hawley, H. H. Hunting and W. C. Anderson.

READING, MASS.—W. H. Proctor has just finished glazing a new house 102x16 and has another of the same size in course of erection. Will heat with steam. Chas. Ingram, formerly of McGregor & Ingram, is foreman here.

AMHERST, MASS.—The new Hatch experiment station building at the Mass. Agricultural College, which is being erected on the site of the one destroyed by fire last winter, is nearly finished. When completed it will be one of the best equipped of the kind in the country.

ERIE, PA.—At a meeting of the executive committee of the Erie Chrysanthemum Club it was decided to change the name of the organization to Erie Chrysanthemum and Horticultural Society of Northwestern Pennsylvania. Mr. D. A. Hendrick was elected president and Mr. Henry Hausmann treasurer.

NEW LONDON, CONN.—Mr. John Spalding has been confined to the house with the fashionable epidemic since Christmas, but is convalescing. La Grippe is no respecter of persons in New London. Young and old, rich and poor all fare the same. The type is not so fatal as that of 1890, but it gets there just the same.

NEW CASTLE, PA.—Christmas trade in cut flowers was unusually heavy, the call being almost entirely for loose flowers. Prices were but little higher than regular rates, which seemed very satisfactory to buyers. Roses were first in demand, carnations second, then Roman hyacinths. The trade in greens was light, no doubt owing to the very mild weather.

ALLEGAN, MICH.—The annual meeting of the Michigan State Hort. Society was held here last month. Among the essays was a very interesting one on "What the Department of Agriculture is doing for Horticulture," by W. A. Taylor of the Department. The society aims to show a peach orchard at the World's Fair and preparations for this are now in progress.

FRANKFORT, KY.—Christmas trade was much larger than that of last year. Sales mainly Mermet, Bride and Perle roses, carnations, narcissus, Roman hyacinths, poinsettias, smilax and holly. My customers ask me if I have American Beauty roses. I tell them no, that they are too expensive. And when I tell them the price is $15 a dozen that settles it, they don't want any.

LITTLE ROCK, ARK.—Holiday trade was fair only. The demand was, however, equal to the supply. Our roses were off crop, owing to the previous good weather. Prices were lower than last year. We made no change in price of roses and with quite a lot of funeral work a few days before Christmas it could be said stock was a little scarce. The cut flower trade in this city is growing better each year.

OTTAWA, ONT.—We have had large additions in florists' establishments the past year. Mr. I. Graham has built two houses 100 by 18 feet; Mr. French has also added two of the same dimensions and rented them to a Mr. Parks; Mr. Tyndall has also started a florist store, his supply will be largely from outside, as I understand his glass is very limited. We have only had one florist here until now. These new additions will no doubt increase the demand.

LOUISVILLE, KY.—F. Walker & Co. have suffered a loss of a peculiar nature. Their place was broken into and apparently nothing taken but some bill heads. But later on it transpired that the thieves had examined the firm's books and made memorandums of the accounts due them from customers, and subsequently presented bills made out by themselves. They succeeded in collecting quite a number of the bills, the total amount, as near as can be ascertained at present, being about $300.

NEW BEDFORD, MASS.—Floral Day was observed by the South Bristol Farmers' Club at its fortnightly meeting on Jan. 2. The hall was tastefully decorated by F. H. Passell, and matters of interest to amateur and professional florists were discussed. Papers were read by Miss Betsey Winslow on "Grasses," Mr. E. Williams Hervey on "Botany," and Mr. F. H. Passell on the care of house plants. Mr. J. G. Barker, superintendent of Forest Hills Cemetery, Boston, also addressed the meeting on the subject of window gardening.

PEORIA, ILL.—The holiday trade this year was fully up to the expectation. Everything came with a rush. Trade on green and holly far ahead of last year. The robbing prices on roses damaged the rose trade. Carnations, narcissus and Romans sold like hot cakes and fully took the place of roses. Begonias, callas, Bermudas, poinsettias, palms and all choice, well grown plants found a ready sale at good prices. The demand for colored flowers, especially red carnations and roses, seemed to be the rage. New Years trade was good and trade since the holidays has been quite brisk.

Coming Exhibitions

Buffalo, Feb. 16—Annual exhibition and meeting American Carnation Society. C. J. Pennock, S c'y, Kennett Square, Pa.
Philadelphia, March 29-April 1—Spring exhibition Penna. Hort. Society. D. D. L. Farson, Sec'y Horticultural Hall, Broad St.

THE World's Fair management is distributing 1,000 of the handsome new lithographs of the horticultural building to horticultural societies all over the world.

AMONG THE calendars for 1892 recently received one from Messrs. L. Templin & Son, Calla, O., is strikingly attractive. One received from E. C. Ludwig, Allegheny, Pa., is also worthy of special note.

CHAS. A. KELLER, for the past three years professor of horticulture in the South Dakota Agricultural College at Brookings, has just accepted a similar position in the Missouri State University at Columbia.

SHADING.—A western subscriber notes the objections to whitewash on the glass as a shading and suggests a curtain of duck so arranged on rollers as to be put over and removed from the glass at will. This plan is not new and would undoubtedly be more generally followed except for the expense. Our correspondent notes that such a covering would be useful to let down over the glass on cold nights also, but fails to say how he would anchor it to keep the wind from carrying it away, and on other than windy nights it would be but little needed. Neither does he say how he would roll it up when frozen stiff and covered with snow and ice, and if he waited for the sun to thaw it out he would lose a great deal of valuable sunshine; again the sun might not show his face the next morning and his greenhouses would be as dark as tunnels. But enough of objections. We state them merely that plans for overcoming them may be formulated, for one of the things that we really need, especially for the spring months, is a shade that can be put on and taken off at will. But it must be simple and cheap as well as effective. Who will suggest something in this line?

UNDER the title "Floral Vulgarity" the San Francisco *Chronicle* pays its respects to those florists who exhibit the sense of the artisan rather than that of the artist. And we must agree with the *Chronicle* that the "designs" illustrated, viz.: a wagon filled with beer barrels and a corset with a wreath above, constructed by some "inspired" artisan to serve as "appropriate emblems" at the funerals of a brewer and a manufacturer of corsets, were truly awful. Another "design" illustrated is "The market woman of Hamburg." And after noting "the outrageous caricature of the human form" we are told that the eyes were black shoe buttons. The *Chronicle* has interviewed florists regarding these monstrosities and in response to their explanations that while they do not indorse such things they are obliged to meet a demand for them, it warns them that they must call a halt and take effective steps to discourage such orders or find themselves obliged to bear the odium of such transgressions.

WE HOPED to have the new directory out by this time, but though part of the list is now in type it bids fair to be ten days more before we can put it on the press. The book is much larger than the issue of 1890 and it has taken much more time to get the matter in shape for the printer and then into type. As the advertising pages will be printed last there is still chance for you to secure space for your card if you have not already done so. But the time is very short and order should be sent at once.

Catalogues Received.

R. T. Lombard, Wayland, Mass., carnations and chrysanthemums; Edward Swayne, Kennett Square, Pa., carnations; C. J. Pennock, Kennett Square, Pa., carnations; Oscar H. Will, Bismarck, N. D., seeds; C. G. Lescano, Hempstead, N. Y., bulbs and seeds; Roustan Servan & Co., St.-Remy-De-Provence, France, seeds; E. H. Krelage & Son, Haarlem, Holland, pæonias; Ls Van Driessche, Ledeberg, Ghent, Belgium, begonias and gloxinias; R. H. Shumway, Rockford, Ill., seeds; Albert Duebendorfer, Black River Falls, Wis., roses and palms; T. H. Spaulding, Orange, N. J., chrysanthemums; Jos. F. Dickmann, St. Louis, seeds; John F. Rupp, Shiremanstown, Pa., seeds; W. L. Smith, Aurora, Ill., plants; Geo. C. Roeding, Fresno, Cal., nursery stock and plants; Wm. Toole, Baraboo, Wis., pansies; Fred W. Kelsey, New York, fine nursery stock; J. C. Suffern, Voorhies, Ill, seeds; J. M. Thorburn & Co., New York, seeds; Webster & Co., Centralia, Ill., nursery stock; F. B. Mills, Rose Hill, N. Y., seeds; A. Blanc, Philadelphia, electrotypes of plants and flowers: W. R. Shelmire, Avondale, Pa., carnations; James Veitch & Sons, London, England, plants; J. M. Thorburn & Co., New York, seeds; J. M. Ogle, Puyallup, Wash., nursery stock and plants; Geo. Hancock, Grand Haven, Mich., carnations; John McGowan, Orange, N. J., plants; E. W. Skelton, Avondale, Pa., carnations; Felix Gonzalez & Co., San Francisco, Japanese bulbs and plants; Wood Bros., Fishkill, N. Y., plants.

Packing Orchid Flowers.

As the orchid season will soon be at its height the following system of packing as practised in France may prove interesting and helpful to some of the readers of the FLORIST.

We used to cut the flowers late in the afternoon. For packing we used flat boxes made of light wood, 18 inches or more in length, 11 inches wide and 3½ inches high, inside measure.

The method of packing is as follows: A rather thick piece of cotton batting is laid on the bottom of the box, this cotton then covered with tissue paper. Then the spikes and long stemmed flowers are laid in the box, so that all the stems are running the same direction. The flowers must not be too much crowded. Little round sticks, wrapped in tissue paper, are pressed tightly down across the flower stems. These sticks must be just a little longer than the inside width of the box, so they cannot move when pressed in the box. As only flower spikes and long stemmed flowers are laid on the bottom every stem is kept down by 2 or 3 of these little sticks. The utmost care must be taken when filling the box not to break or bend any petals or sepals. Every flower must be faced toward the cover of the box. This is very easy to do when handling single long stemmed flowers such as cypripediums, lycastes, some of the cattleyas and most of the masdevallias, but long spikes such as phalænopsis, vandas, oncidiums and odontoglossums make more trouble, especially when very strong spikes have side branches or when the spikes are thickly covered with flowers. One must be extremely careful when laying the little sticks between the flowers across the stems. After the packing is done so far lift the box over your head, turn it upside down and shake it. If by doing this any of the flowers are misplaced a piece of string, or better, raffia, is laid across the loose stem and tied to the two next cross sticks.

All the short stemmed orchid flowers are packed in the following manner: A little bit of wet sphagnum moss is tied around the end of the short stem, then the stems are tied with raffia to the same kind of sticks, wrapped with tissue paper, as are used to keep the flowers down on the bottom of the box. These sticks, with the short stemmed flowers tied around, are placed in the box above the other flowers. They should fit tightly in the box, but it is well to drive a little tack from outside through the box in these sticks to keep them sure in their places. As the boxes used for packing are very flat the flowers must be tied only to one side of the sticks. When placed in the box they all are faced toward the bottom of the box and cannot be pressed or touched by the cover.

Some flower spikes which are covered thickly with flowers all around, for instance ærides, are tied also to sticks and packed the same way as the short stemmed flowers.

Many other rare and expensive flowers like anthuriums, gardenias and lapagerias are packed in the same way.

In winter the boxes must be wrapped in a thick cover of cotton to prevent the flowers being touched by frost.

Rochester, N. Y. GUS NOACK.

E. H.—Yes, carnation flowers could be made a profitable crop under the circumstances you name, but the product would have to be of first quality to insure satisfactory returns.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

"FARMER" Samuel Allen is out with a very handsome catalogue of Planet Jr. goods for 1892.

MR. JOHN A. SALZER is very ill from the result of a stroke of paralysis suffered some three weeks since.

MR. A. BLANC of Philadelphia, the eminent horticulturist, pronounces the new Picture Rock Tomato the finest he has ever seen and says that specimens of it in his office kept for three or four weeks before showing signs of decay, and this, too, during the hot summer weather.—*Mayflower for Jan'y.*

THE UNIVERSITY of California Agricultural Experiment Station in bulletin No. 5 are offering seeds, roots and tubers of new or rare plants at from 3 to 10 cents per root or package. It would seem that such distributions should be freer or else made at such a price as not to conflict with any legitimate offer made or which might be made by dealers in such stock.

The "Crown of Thorns."

The *Rural New Yorker* of January 2 has something further to say in regard to misrepresentations in seed and plant catalogues and alludes to a Kansas law passed in 1886 in regard to misrepresentation and deception in the sale of trees and plants. Referring to a catalogue description as follows:

"The Crown of Thorns" (Euphorbia splendens). The description states that "On the wild, rocky hills of Judea and in the immediate neighborhood of Jerusalem this emblematic plant is found, and from there our original stock was secured. * * * The 'Crown of Thorns' worn by our Saviour was made out of this plant, and some sacred historians assert that the drink given to our Saviour before his death was made from the juice of this plant."

It says:

The plant in question is a native of the Isle of France, as every florist knows, and the whole statement of the catalogue is without a shade of truth.

Mr. Kranz has a "Hummer."

A German paper published in Muscatine, Iowa, publishes the following item:

Our old friend Mr. Conrad Kranz has accomplished what no other florist has succeeded in doing by raising a species of roses which he has named Uncle Sam. The same blooms three times a year in the national colors, red, white and blue. Mr. Kranz has an order for 6,000 for the World's Columbian Exposition.

Mr. Kranz should tell us all about this startling novelty. He could sell many times 6,000 to the trade at rattling good prices.

It seems very curious that Chief Thorpe of the Floricultural Dep't of the Fair should have maintained the strictest secrecy regarding the order for 6,000 of such a remarkable new rose.

But there seems to have been an omission in the description, for certainly there must be stars in the blue. How is this Mr. Kranz? And is not each bloom tipped with a golden eagle? Pray keep us no longer in suspense!

IN ADDITION to covering the whole American trade, the AMERICAN FLORIST has subscribers in England, Scotland, Ireland, France, Holland, Belgium, Germany, Russia, Italy, Spain, Turkey, Australia, New Zealand, Japan, China, India, Brazil, Natal, South Africa, Mexico, Cuba, Sweden, Norway and Denmark. When you insert an advertisement in the FLORIST it goes to all the countries named above as well as to the American trade.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By a good rose grower, married, good reference. C D, care Am. Florist.

WHY You Should Grow Mushrooms.
Because they are the most profitable crop for the outlay that can be grown and may be grown without interfering with other crops. The market is sure, the supply never having been equal to demand.

WHEN You Should Grow Mushrooms.
During the Winter and Spring months, the first planting in August or September with successional planting until April.

WHERE You Should Grow Mushrooms.
Under the greenhouse benches, on the greenhouse benches among growing crops, in Rose Houses, in frames in the greenhouse, in cellars, stables or outhouses, in the open field or in mushroom houses.

HOW You Should Grow Mushrooms.

First get spawn that will grow. It must be fresh, well spawned, and in good condition. **Gardiner's Celebrated English Mushroom Spawn** is the best, and is always fresh and reliable. The details of culture are given concisely in our treatise, **"Mushrooms for the Million,"** Mailed free. **Falconer's "Mushrooms and How to Grow Them."** Published at $1.50. (Gardiner's price $1.35 post free.) **Robinson's "Mushroom Culture,"** 50 cts. post paid.

GARDINER'S ENGLISH MUSHROOM SPAWN.

John Gardiner & Co., have made a specialty of choice spawn for years, and their celebrated English brand (made by the best maker in England, specially for their trade), has gained an enviable reputation among critical growers for its uniform good quality, and can be thoroughly relied on to produce a good crop of the best mushrooms. Orders booked now for delivery as wanted, $8.00 per 100 lbs. Special rates to large growers. Address all correspondence to **21 North Thirteenth Street,** Philadelphia, Pa.

JOHN GARDINER & CO.

MILLA BIFLORA.

A Mexican Bulb of recent introduction. Throws up several flower stalks from each bulb. Increases from year to year. Flowers star-shaped, and pure waxy white. Excellent for summer cut flowers.

First size, very large bulbs, $4 per 100.
Second size, fine blooming bulbs, 40c. per dozen; $3 per 100.

Send for New Wholesale Priced List, ready January 10.

The Violet Disease.

How very different and entirely opposite are our experiences when relating to diseases and non success in flowers! In your issue of December 31 you publish a letter from Mr. Wadsworth of Plainfield, N. J., in relation to the violet disease which is so contrary to our experience that I am led to write this letter.

The last three years we have had great luck with our violets and the disease so often complained of was like "milk sickness," always in the next county. But this fall we have had our turn and although our violets have had the same treatment as heretofore yet the leaves began to wither, turn dark and die. We watched them very closely, plucked every diseased leaf as fast as it appeared, until now they are coming out again and are covered with buds, and we hope they will yet give us some violets.

Our violets are grown in cold frames the same as Mr. W.'s, excepting we make our cuttings in the fall instead of spring, as we believe it gives us healthier and stronger plants than when taken after a winter's forcing.

The violets affected were the Marie Louise, while several frames of the Czar very close by were not affected in the least. C. W. D.

New Albany, Ind.

I have had the same experience with violets as Mr. Wadsworth and mine have not been moved. I sell the plants to my customers and they get double the amount of bloom that I do and they get them much earlier. Mine receive every attention and I cannot understand it.

E. POWER.

JOHN F. RUPP, Shiremanstown, Pa.

Mention the AMERICAN FLORIST when writing advertisers on this page.

TO FLORISTS, JOBBERS AND MARKET GARDENERS.

UNITED STATES NURSERIES.

Early in the spring of 1891, we were fortunate in placing large contracts with responsible growers for quantities of all kinds of Vegetable and Flower Seeds, which places us in a position to quote advantageous prices to the trade in general. Florists, Jobbers and Market Gardeners would do well to send us their list of wants in this line especially, for prices before our large stock becomes depleted.

Our stock of EXTRA EARLY PEAS is the most select and best that can be had in the country; superior to most stocks sent out under fancy names and seal; and all other leading kinds; such as:

Champion of England, the favorite marrow. **Advancer,** half dwarf, second early; best market pea. **Little Gem and American Wonder,** best dwarf peas in cultivation. **Pride of the Market,** large handsome pods. **Telephone,** best late pea grown.

Our large stock includes also selected stocks of the following, which can be relied upon for absolute pureness and high germination. **BEANS, Extra Early Red Valentine** the snippers' favorite. **Mohawks,** the earliest green flat pea. **Long Yellow Six Weeks, Improved Golden Wax,** standard sort, rust proof. **Wardwell's Kidney Wax, Flageolet Wax,** largest podded wax varieties, much grown by southern shippers. **Golden Eye Wax,** stands all kinds of seasons and is most salable.

CABBAGE. All Long Island grown, from originators' stocks. **Jersey Wakefield, Early Summer, Succession, Late Flat Dutch,** the four best kinds in existence, and no others should be sown where a succession is wanted.

CUCUMBER. White Spine, the best kind for general use. **Extra Early Green Prolific, Boston Pickling,** most useful and profitable p ckling sorts.

LETTUCE, Curled Simpson, best curled early variety. **Boston Market,** excellent for forcing. **New York,** the only kind to cultivate outside.

ONIONS. Although one of the scarce articles this year, we are well stocked and can quote prices on the following kinds guaranteeing high germination. All localities have their favorite kinds. We simply mention the leading well-known varieties: **Red Globe, Yellow Globe, Danvers, Red Weathersfield, White Globe, White Portugal, Spanish King, Extra Early Red, Southport's Yellow Globe.**

RADISH, Beckert's Chartier, most profitable summer radish. **Early Round Dark Red,** earliest and best turnip variety. **French Breakfast,** very popular, oblong, white tip. **Early Scarlet Turnip,** French seed, choice stock. **White Tipped Scarlet Turnip,** market gardeners' favorite. **Yellow Summer Turnip,** useful summer kind.

SALSIFY. Mammoth Sandwich Island, much improved stock.

SPINACH, Large Thick Leaved, the best kind to plant.

SQUASH. The following kinds are too well known to require description, but it is safe to say the best and most useful in cultivation. **Boston Marrow, Summer Crookneck, White Bush Scalloped, Yellow Bush Scalloped.**

TOMATO. Acme, a favorite with shippers. **Mikado,** large, irregular in shape, but very solid. **Favorite,** good standard sort. **Early Ruby,** earliest of the large; good kind. **Table Queen,** solid and large. **Perfection,** excellent shipping sort.

TURNIP, Extra Early Milan, the earliest variety in cultivation. **Red Strap Leaf,** standard sort. **Improved American Top,** the best.

ALL FLORISTS' SEEDS AND REQUISITES.

Mammoth Verbena Seed.

NEW CROP NOW READY. Choicest mixed varieties in the brightest colors. Per trade packet, 50 cts; 1-4 ounce, $1.00; per ounce, $4.00.

The strain we offer this year is far ahead of that sold last season with such satisfactory results. Only the richest colors have been retained, and the largest flowers selected for seed. Seedling plants are now preferred by the leading florists for spring sales because of their vigor and freedom from rust. With this strain to depend on there can be no doubt about the success.

DREER'S DOUBLE HYBRIDIZED PETUNIA SEED, so well known to the trade for the past 30 years, constantly inproving by judicious hybridizing. Trade pkt containing 700 seeds, $1; small paper 15c.

DREER'S SINGLE GRANDIFLORA MOTTLED AND STRIPED PETUNIA. This strain will give splendid results in pot culture, as well as open ground. It is rich in colors and markings, and of largest size. ⅛ ounce, $2 50; trade packet, 75 cts.

Cobea Scandens..... per oz. $.75 Centaurea Candidissima, per oz. $2; per 1000 seeds, 50c.
Smilax Seed, per lb. $8 " 60 " Gymnocarpa, " 50c. " " 30c.
☞ Preliminary flower seed list to the trade of seasonable seeds now ready; mailed free to the trade.

HENRY A. DREER, Philadelphia.

100,000 VERBENAS.

THE CHOICEST VARIETIES IN CULTIVATION.

Fine pot plants, $2.50 per 100; $20.00 per 1000. Rooted Cuttings, $1.00 per 100; $8.00 per 1000.

—NO RUST OR MILDEW.—

Packed light, and satisfaction guaranteed. Send for circular.

Our sales reached nearly 200,000 last year, and we can assure our customers that our plants are fully equal, and assortment of varieties surpass those of last year.

EXTRA VERBENA SEED.

IMPROVED GIANT.

This magnificent strain of Mammoth Verbena has given perfect satisfaction to my many customers in the florists' trade, and is justly claimed to be the finest in cultivation. The florets measure over an inch in diameter, borne in immense umbels. Very free flowering and of the finest colors. Every florist should be sure to sow of it. Trade pkt. 25 cts.; 3 pkts. 60 cts.; 6 pkts. $1.00.

JOHN F. RUPP, Shiremanstown, Pa.

To Members of Florists' Clubs.

We have been favored with a typewritten copy of the report of Secretary Ewing, of the Toronto Gardeners' and Florists' Club at the recent annual meeting of that organization, and in it are expressed some thoughts that will bear memorizing by the members of every club in the country.

We give some extracts below:

"Always speak *well* of the club, and speak of it on every possible occasion to your employers, customers or any person you may meet and hold conversation with. If you have anything to say against the club or any of its members say it in meeting (if it must be said) where whatever you have to complain about can be remedied or the person complained against can have a chance to explain.

"Don't let your potting shed develop into a depot for scandal and complaints about other members, let it be a depot for new and progressive ideas for the benefit of the club and therefore for the profession at large.

"Don't be disappointed and go off in a huff if when you propose some pet idea to the meeting, other members can not see it in the light you do; bring it up again and again, if it is really a good idea it is bound to win its way, if it does not amount to anything you will soon find it out yourself and drop it.

"Don't allow yourself to get into that state of mind when it seems to you as if you had nothing more to learn or to gain by attending meetings of the club; you *can* learn something and you *do* gain something (though you may not be able to see it at the time) at every meeting, however dull.

"Enough of this, however, but before leaving it I would just say that I do not wish it to be thought that I am aiming these remarks at any individual member, nor do I profess to live up to them myself altogether, but it is a good thing to have a standard to go by. I will also say here that it rests with the members, each and every one, to make this club a power in this city which can be used to our own advantage and benefit whenever a fitting opportunity occurs."

We are pleased to note from the report that in spite of the expense incident to the last convention of the S. A. F. the club was not obliged to call upon any of its members outside of their annual dues, and also that the matter of a building for the club, for holding meetings, reading room, library, smoking room, etc., has been brought before the club for its consideration. The possession of such headquarters gives a club a stability that it can not otherwise have. An organization with a "home" is stronger just as a man with a home is stronger.

AUGUST RÖLKER & SONS, NEW YORK,
136 and 138 W. 24th STREET, or STATION E.

THE PANSY SOCIETY OF AMERICA.

Devoted to the culture and advocacy of the pansy—the Children's Flower for the National Emblem of the United States of America.

The Lesson: Evolve and avoid Revolution.

The Motto: Union, Culture and Peace.

Price of admission to and registry in The Pansy Society, one (1) cent.

All persons of whatever age, sex, color, or condition, in America, are invited to join it. Where local and State societies are formed, the local Sec'y collects three cents from each member, and sends the name of the local society and the number (above ten) to the State Sec'y, if there is one, with two cents for each member (less postage) and the State Sec'y sends the National Society name of State Society and number of local societies, with aggregate membership, and one cent for each (less postage). If no State Society is formed, the local Sec'y sends its name and number of members to the National Society with one cent for each member (less postage) and reports to the State Sec'y whenever one is elected, with remittance of one cent for each member.

Every one is cordially invited to assist in forming local and State societies. For fuller information address the President or Secretary, with return postage.

Please note that the cost of joining local societies is no more than the price of registry in the National Society, plus the postage necessary to remit it. It is designed to make the organization so simple, and the price of admission so small, that no one in all America will be too poor to join it.

Sweet Scented Begonias.

In the FLORIST of December 31 we find an article with the above heading. As to the tuberous begonias we will leave them to those better posted to speak. We have a begonia that produces white flowers on long stems, that are nearly as fragrant as the freesia flowers, the flowers holding to the stems for a long time. The plant is of strong upright branching habit, stems light green, leaves a bright lustrous green. We have no name for it, as the old German woman we bought it of knew nothing about it except that its flowers were fragrant. I hope this will be the means of bringing out further information in regard to this most interesting variety of plants.

Abilene, Kans. C. H. BAGLEY.

The Violet Disease.

Has no cure yet been discovered for the violet disease? My neighbors here say that there is no cure, and that the only thing to do is to pick the rusty leaves off. I did this but it continues to spread.

A SUBSCRIBER.

[If any one has yet discovered a cure for or a preventive of the violet disease we shall be glad to hear from him.—ED.]

In to Stay.

AM. FLORIST CO., Chicago, Ill., *Gentlemen:*—We send you to-day the cut you say is needed for our "ad." in the directory. We cannot refrain from again expressing our great satisfaction with the AMERICAN FLORIST as an advertising medium. We give each paper in which advertisements of our steam and hot water boilers appear a different street and number, so that we can accurately tell just how much good each paper does us. We can safely promise to use the columns of the AMERICAN FLORIST as long as we have boilers to sell. Very truly,

WE HAVE in hand for next week's issue quite a number of valuable articles that have been crowded out this week through pressure of news. Among these is an article on growing cyclamens, by Mr. John Rose, illustrated with beautiful half-tone engravings from photographs of plants grown by him. We shall also continue Mr. Menand's personal recollections.

PLEASE mention the AMERICAN FLORIST every time you write an advertiser.

Society of American Florists.

ANNUAL MEETING OF THE EXECUTIVE COMMITTEE.

The regular winter session of the Executive Committee was held at the National Hotel, Washington, D. C., on Jan. 12-13-14, President Jas. Dean presiding. All the members of the committee were present, with the exception of Mr. Buckbee of Illinois, who was unable to come by reason of sickness, and Mr. Burton of Phila., who was detained at home on account of the death of his mother. Mr. J. N. May of Summit, N. J., and Mr. John Saul of Washington, D. C., who were present, were, according to custom, elected to act as substitutes for the absent members.

The committee held three sessions daily and the amount of business transacted was unusually large. The report of the treasurer showed an increase of several hundred dollars to the credit of the society and from the secretary it was learned that the membership list is more than holding its own.

After visiting and inspecting the various halls available for the coming convention the National Rifles Armory was finally selected as offering the best facilities for the purpose. The upper hall will be the audience room and the lower hall will accommodate the customary trade exhibit. There is a sufficient number of small rooms for secretary's headquarters and for committee work, hence all the departments of the great meeting will be under one roof, an arrangement which will be very convenient and conducive to the comfort of those in attendance.

The list of subjects selected for essays and discussion was as follows:

Decorative Art.
Floriculture for Children.
Hybridization.
Comparative Value of Commercial Fertilizers.
Insect Pests in the Greenhouse.
Club Root on Roses and other Plants.
Propagation of Roses.
Commercial Integrity.
Flowers for Holiday Demands.
Marketing Cut Flowers.

The customary Review of New Plants, which was so thoroughly done by Mr. Wm. Falconer last year, has been again assigned to that gentleman. A large number of valuable and practical subjects for the Question Box were received and filed and this department of the work next August will be of the usual interesting and instructive character.

The need of some definite regulations for the management of the trade exhibition has long been apparent and a subcommittee was appointed last year to formulate something in this line. The result of their labors was the adoption at this meeting of the Executive Committee of the following set of permanent rules and regulations:

1. The Society of American Florists shall, through the Executive Committee, control all features of the trade exhibition.
2. There shall be appointed annually at the January meeting of the Executive Committee a superintendent of exhibits. The vice-president of the S. A. F., or the local organization in the place where the convention of the current year is to be held, shall be invited to recommend such superintendent for election by the Executive Committee, as aforesaid.
3. Said superintendent shall have general charge of all details of the annual exhibition and shall be under seven days full service and pay at and during the convention.
4. He shall receive all applications for space and assign the same in the order in which they are received by him. He shall provide and arrange all necessary tables and staging.
5. Judges shall be appointed by the Executive Committee and the superintendent of exhibition and duly notified not later than at the first morning session of the convention.
6. The exhibition shall be closed between the hours of 2 and 4 p. m. on the first day of the convention, during which time the judges shall pass on the exhibits, and they shall report promptly to the secretary on the same day.
7. Awards shall be given as follows:
Highest—Certificate of Merit.
Second—Honorable Mention.
Third—Highly Commended.
8. No awards, except the above named, shall be made on any article exhibited.
9. Doors of exhibition shall be closed five minutes before the opening hour of each session and remain closed during the session.
10. Exhibition to be open not less than two hours before the opening of morning sessions, to remain open during the day, except during session hours, and as provided in Sec. 6 and to remain open one hour after the closing of the evening session.
11. Wall space shall be measured 4 feet in height and when practicable a table not less than 1 foot wide shall be added gratis, if desired and applied for with entry.
12. Space desired shall be designated in square feet. A uniform charge of 25 cents per square foot for all space will be made, excepting that all plants and flowers contributed for exhibition purposes only shall be admitted free.
13. All adjustments not covered by rules or published action of the Executive Committee shall be referred to that committee.
14. Exhibits not in position before 1 p. m. on the first day of the convention may be excluded from the report of awards.
15. No articles exhibited shall be removed until after the close of the last day's session except by permission of the superintendent of exhibition.
16. Exhibition classes to be arranged as follows: A—Plants; B—Cut Blooms; C—Boilers and Heating Apparatus; D—Greenhouse Appliances, including Flower Pots; E—Florists' Supplies, including Fancy Earthenware; F—Bulbs and Seeds; G—Miscellaneous.
17. Exhibitors may group their goods together, excepting in the case of living plants and cut flowers. These shall be shown in a separate department from the other classes.

In accordance with the provisions of Sec. 2 Mr. C. F. Hale, of Washington, being recommended for the position of superintendent of exhibitions, was duly elected to serve at the coming convention.

In addition to the awards provided for in the foregoing rules it was voted that three medals of gold, silver and bronze be offered to the originators of new hybrids or varieties raised from seed or the discovery and introduction of new species or varieties that are decided improvements over existing kinds. The awards to be made in accordance with the following rules:

No award to be made for any plant that has not been grown at least two years in this country and exhibited at least twice before some regularly recognized horticultural society where it shall have received a first class endorsement by said society.

Further, that it have the endorsement in writing by three members of the executive committee before it shall be considered by the full executive board, and then only shall such award be made by a two-thirds vote of the committee. Such species or variety to be shown in plant form and cut state where practicable.

Not more than one medal shall be awarded in each class and not more than three in all in each year.

Secretary Esler of the Florists' Hail Association having made application for the assignment of a portion of the time of one evening for the annual meeting of that body, it was decided, in view of the constant increase in the number of minor societies and the limited time occupied by the S. A. F. for its regular sessions, that no time belonging to the regular sessions be hereafter given up to any kindred organization, but that during every afternoon the use of the audience hall shall be free to these organizations in the order of their application for the same.

It was also voted that no announcement of bowling or other entertainments of any kind that will conflict with any regular session of the S. A. F. shall be permitted on the official program.

The following resolution was unanimously adopted:

WHEREAS, Washington friends have invited us to meet in the capital city at our next annual meeting, therefore be it

Resolved, That in accepting their kind invitation we do not wish them to feel that they have placed themselves under obligation to extend to us as a body any courtesies involving expense to themselves; and that it is the desire of the Executive Committee that their efforts in this direction be limited to advising as to the best methods of visiting the various places of interest, leaving each individual member to defray his proportion of whatever expense is incurred.

Considerable correspondence relative to the part to be taken by the S. A. F. in the World's Columbian Exposition was read and the matter thoroughly discussed, the result being the adoption of a resolution addressed to Director-General Davis, as follows:

"DEAR SIR—The Executive Board of the Society of American Florists, now duly assembled in Washington and having under consideration certain communications pertaining to the Horticultural Department of the World's Fair and having a most earnest desire to aid in the success of that department, but having received no definite information regarding the plans, classifications, rules and regulations thereof, do hereby respectfully, yet most emphatically and urgently, request that the department shall immediately make known to each and every person or persons interested in the welfare of this department and especially for the information of intending exhibitors, a schedule giving the full details of the exhibits, manner and time of exhibiting them, with explicit rules and regulations governing the same and the time and conditions of proposed awards, and such other information as will in any way facilitate, aid and benefit the cause of horticulture and the success of this department in particular.

"The fact must not be lost sight of that exhibitors of living plants, unlike those of manufactured goods, must have time in which to prepare, locate and establish their exhibits.

"Should the information herein requested be immediately given to us, we as a society will do all in our power to assist the department in disseminating such information and to enlist the hearty co-operation of horticulturists in making this feature of the exposition the success it merits, commensurate with the growing importance of our business and the honor of our country."

This resolution was signed by every member of the committee and a copy sent to the Associated Press for general circulation.

The usual consideration of the work of the Nomenclature Committee came up, and Mr. Wm. Falconer having declined to serve longer on that committee, Mr. E. G. Hill was elected in his stead as chairman for the ensuing year. The names of Jackson Dawson, John Saul and Geo. Vair were substituted for those of J. D. Raynolds, John Thorpe and Chas. D. Ball as members, and otherwise the make-up of the committee remains as last year.

It was voted that hereafter at all conventions of the Society of American Florists the secretary be required to keep a registry book in which all visiting members will be requested to record their names and place of sojourn during their stay.

Much regret and sympathy was expressed on receipt of the news of the death of Mr. John Burton's mother and telegrams of condolence were sent to Mr. Burton and Mr. Lonsdale.

Final resolutions were adopted as follows:

Resolved, That the thanks of this committee be extended to the local florists, gardeners and all others who have so kindly aided us in the discharge of the duties assigned us, rendering our brief stay in their city both profitable to the society and pleasant to ourselves.

An invitation from the National Gardeners' Club of Washington to meet them and a few other friends at a banquet in the National Hotel on the evening of Thursday, Jan. 14, was received and accepted with thanks. All the members of the committee attended and the evening was passed most pleasantly.

SPLINTERS.

The national flower question was promptly shelved.

The next time Mr. Long thinks of introducing any fancy words in the discussions he will do well to take Mr. Welch into his confidence beforehand.

Mr. Saul claims that Washington is one of the coolest cities on the continent, but incautiously admitted that it might be warm sometimes at 4 p. m.

The members of the committee called upon Secretary Rusk. "Uncle Jerry" gave them a most cordial reception.

Mr. Falconer in withdrawing from the Nomenclature Committee incidentally remarked that a man had been threatening to come all the way from Tennessee on purpose to shoot him.

Mr. Manda asserts that he has been told that there is more grazing ground in the city of Chicago than in the whole state of Massachusetts.

Mr. Falconer says we must give Chicago credit for one thing at least; that is their liberal support of their parks.

The National Gardeners' Club of Washington is composed of just the right kind of material, that is, a proportionate representation of youthful old members and sedate young members.

OUT OF 428,618 emigrants who arrived in the United States during the year 1891 260 are classed as florists and 1,126 as gardeners.

The Late James Taplin.

We present in this issue a portrait of the late James Taplin, from a photograph taken in 1876, the most recent existing portrait; and a sketch of his life from Mr. J. N. May, much more complete as to details than the hurriedly prepared one that appeared in last issue.

Mr. James Taplin died at his home in Maywood, N. J., on Saturday Jan. 9, after an illness of only 14 days, from an attack of La Grippe, which turned to bronchial pneumonia and ended in his death as above, in the 61st year of his age.

He was born at Overton, a village in Hampshire, England, and as soon as able to earn his own living was duly apprenticed to the business of a gardener. After serving his full time as such he worked in several of the best gardens in England, first as journeyman, then as foreman, etc., during which time he was steadily adding to his knowledge. Being always a very hard worker and also a great student he mastered his business much earlier than many others who start out under equally favorable conditions.

As evidence of this, while quite a young man, he was appointed head gardener to His Grace the Duke of Devonshire at Chatsworth, England, where he succeeded Sir Joseph Paxton, who gained a world wide reputation as the designer of the immense glass building for the first international exhibition, or as it would now be called, "World's Fair." Mr. Paxton had during some years previously been steadily improving and adding to the glass structures and also the collection of plants at Chatsworth till it had become one of the most famous establishments, if not really the one above all others in the world where all horticulturists' eyes were turned. It can readily be imagined that there were hundreds of men in England who would consider it a great honor to take charge of such a place, and in proof of this there were a great many applicants from among men in high standing, but Mr. Taplin was the one chosen, which speaks volumes for his ability, which was subsequently demonstrated by the magnificent plants, flowers, fruits, etc., which were produced there under his management.

In 1864 he relinquished his position there to come to America and take charge of the florist business of Mr. George Such of South Amboy, N. J., where he soon displayed his master hand by producing such magnificent specimens of many rare tropical plants as had never been seen in this country, if anywhere, before, and which were often exhibited by him at the old Madison Square Garden, N.Y., at the time the New York Horticultural Society held its grand shows there. The vivid pictures of the fine plants and large collections displayed by him there still remain very fresh in the memory of a large circle of friends and admirers who gathered around him there, for in addition to his abilities as a horticulturist he was a warm, genial friend, honest, plain, and fearless of friend or foe.

In 1879, after Mr. Such had decided to dispose of his immense collection, Mr. Taplin bought a farm at Maywood, having considerable glass already built upon it, to which he removed with his family and where he resided till his death, and where he had carried on the wholesale growing of flowers and plants, principally for the New York market. Of late he has been turning his attention to hardy flow-

ering shrubs, etc., with considerable success.

His frequent contributions to the horticultural press, both in this country and in England, were marked to a degree with good sound practical instruction, always to the point and void of gloss or theory.

He leaves a wife, two sons and three daughters. One, the eldest, Emily Louise, now Mrs. Royle, was formerly a very valued contributor to this paper. They mourn the loss of a kind husband and loving father and have the sincere sympathy of a large circle of friends.

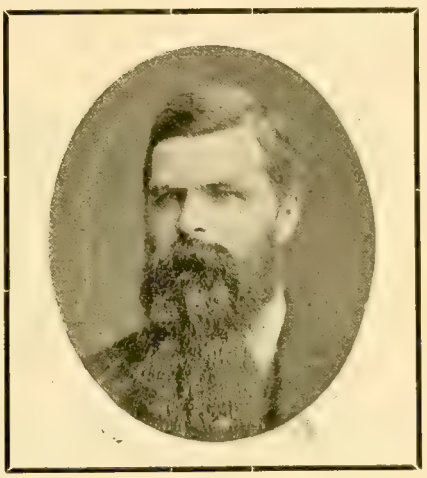
J. N. M.

Commercial Aspect of the Florist Trade.

BY C. H. GRIGG.

[*Extracts from paper read before the January meeting of the Florists' Club of Philadelphia.*]

Ten years ago the general public knew very little about fine flowers, especially roses. Very few were then grown around Philadelphia, and we were obliged to look to Boston for the finer varieties, even New York being considerably behind at that time. Wonderful strides have been made since then and the finest flowers are now in profusion everywhere.



The question is, can not a better value be obtained for them? The only answer seems to be to devise some plan for their more general distribution and to avoid, if possible, what seems now to be a necessary waste. You say flowers are a luxury and you can not create a demand for them. But flowers are more than a luxury; they have come to be considered a necessity on many festal and other occasions. Everybody loves flowers, yet thousands only see them at rare intervals, and but seldom have the pleasure of actual ownership. I contend that popular flowers should be sold to the masses at popular prices, and one way of doing this would be by establishing suitable places in popular localities, where it would be known that perfectly fresh flowers could be had at a fixed, reasonable price. Take a few hints from the way in which other lines of business are conducted, give the matter thought, study and adopt a system and give it a fair trial and improve it if you can. Don't turn the trade away and let the street fakirs come under your very nose and steal away your legitimate profits besides demoralizing the entire trade.

There is one establishment in this city where, if they should enter into the sale of loose flowers and should devote the same energy and tact as they do in all the other departments of their business, they could, I believe, not only dispose of the surplus stock, but would tax the combined efforts of all the growers in this vicinity to supply them material, because they would put brains, skill and capital to work, seeking economy and effective handling of goods by use of glass, marble, refrigeration, electric lights and employment of pretty girls with deft fingers, besides selling flowers at reasonable prices.

Single buds or small clusters of mixed flowers could be sold at a good profit, at 5, 10, 15 and 25 cents each, fresh from the original packages in which they come to market, not faded and torn by exposure to wind and dust, or injured by rough handling as is the case with nearly all street flowers. Customers would not hesitate to buy such flowers and immense quantities could be sold at reasonable but profitable prices if placed attractively before the people. Such places could be established upon our central business thoroughfares, at the ferries, stations, hotels, and possibly in the markets. They could be carried on by individuals or by a company.

But some will say, this would break up the individual florists. I do not think so. The man who sells a rhinestone ring does not necessarily enter into competition with a first class jeweler. There will always be a demand, and a constantly growing demand, for the skill and taste required in the graceful grouping of plants and flowers into forms suitable for special occasions, and this demand will increase as wealth and culture and the love of art expands.

No wide awake florist need be told that there is a constantly increasing demand for plants for all uses except that of personal adornment. The signs of the times surely indicate, and experience will prove,

JAMES TAPLIN.

that palms, ferns, orchids, fine foliage and blooming plants, will supply to a great degree the needs of the future, at banquets, for table decorations, and even for funerals, of course interspersed with choice cut flowers.

People want a change and it is coming. The rose is pre-eminently the queen of flowers, yet it is too much to expect that the world will forever admire it to the exclusion of other flowers far less beautiful. The chrysanthemum will always be a coarse flower with all its culture, yet it is popular and shows that the public craves a change. It has become a fad to affect new styles in flowers as in dress and home adornment. So don't put all your efforts in one and the same direction.

In many cases the florists have allowed the caterers to step in and pocket most of their profits. When a caterer is sent for the first thing he asks is about the flowers and he sometimes succeeds in making people believe he can furnish them better and cheaper than any florist. Then he takes his order to a florist and gets him to do the work demanding the bulk of the profit for himself. Is this right? Suppose he does bring you an order once in a while, he always wants the stuff at half price and it is often hard to get the money out of him then. This is also true to a large extent with the undertaker or funeral director. I think the time has come when the Florists' Club should take a decided stand upon these matters.

We should cater more to the wants of the great middle and poorer classes, for certain it is that the great bulk of our sales are made to them in spite of a common belief that the very rich are our main dependence. At the great holidays like Christmas and New Years quarters and halves and single dollars will pour into your cash box in a perfect stream while the $10, $20 or $50 orders are the exception and are almost invariably charged. And the fact that the trade of the classes noted is cash is a very pleasant feature. If the rich were more prompt in paying their bills the trials of the florist would be considerably curtailed. But you must not turn aside from the rich. Oh, no! To them you look for all encouragement to reach the highest ideal. Your greatest success will be sure to claim their admiration and patronage. And this class is a constantly growing one, receiving large accessions every year. Fortunes are continually being made or inherited and the present generation is being educated in all the refinements of art and culture.

I want to say a few words about the wholesaling of flowers. Philadelphia growers now stand face to face with the most celebrated growers. Flowers are in profusion everywhere, but the great problem of the growers seems to be to turn them to a profitable account. Many thousands annually go to waste in the hands of the retailer; many more yield no return to the grower. In Boston many dealers are extensive growers, in New York nearly all the stock goes through the hands of the commission dealers, while in this city there is a sort of conglomeration of all plans, many growers depending on their own efforts from day to day to sell their blooms. I would suggest that florists adopt some such solution for the problem as is adopted by other producers of perishable goods. A flower market or exchange might be established where the product could be sold at auction or kept in refrigerators until a market is found. Look at the waste of time and expense when thirty or forty men make the rounds of the stores when two, three or four men could accomplish the same or better results under a different system. All producers of perishable commodities have had to meet and solve this same question of means of placing their goods quickly on the market to best advantage, and florists should profit by their experience.

Suppose a place should be fitted up in some central location, near the railroad stations, suitably provided with refrigerators, tables, etc., to which as many growers as could be induced to try the experiment would send their flowers so they would be received as early in the morning as practicable, to be offered for sale at auction. Let them be put up in bundles of say 25 or 50 or 100 as the case may be, by the growers before they leave the greenhouses. Sell them to any who wish to purchase in original packages only and deliver the goods at once. If flowers were in demand they could all be sold in a short time and would bring full value. If any remained unsold they could be placed in the refrigerator and kept on sale or sent out in wagons later in the day and offered to the trade. This place would have to be managed by an individual or firm or company. A commission could be charged for selling and remittances made as required. Of course there would have to be some restrictions and it would probably require time to get into working order, as in the case of any new system, but I believe it to be perfectly feasible. Some might object that a private party wanting flowers could purchase as cheaply as a dealer, but very few private parties would want large lots of the same flower, besides the sale would be held too early in the day for many

private people to attend, and rules could be adopted, if thought best, to sell only to dealers. If such a place could be established and should receive the confidence and support of the trade it would greatly simplify the method of wholesaling flowers. I do not say this is the best plan that could be adopted, but growers would have the satisfaction of knowing that the stock was fairly offered in open market, and know also just what it brought, and if no purchasers appeared he would know the stock would be well cared for and later in the day again offered direct to the trade, when if there was still no call it could be so reported.

If the above plan should not prove acceptable a sort of exchange could be arranged, where the different growers could be represented in one place and offer their stocks to purchasers at stipulated times each day. Whatever be the plan I have faith to believe the time will come when ways and means will be adopted in the handling of flowers and plants of which even the most advanced of us have at the present time but faint conception.

Find out to the exact fraction just what it costs to produce a particular plant or flower. Then dispose of it at the best profit you can get. The day for enormous profits has gone by. Competition is too keen. If one man by skillful management can produce roses at a net cost of 1 cent each, and another finds that after his best endeavors the same quality costs him 5 or 6 cents to produce, the latter had better make up his mind at once that rose growing is not his forte and turn his attention to something else.

I don't believe in luck in growing flowers any more than in any other business. The same conditions produce like results. Let it be demonstrated by broad and sufficient tests just what it costs to produce the different plants or flowers under the most favorable conditions, then the man who produces the finest stock at the lowest price will be sure to get the contract every time. There should be no haphazard methods in growing. I know all will not agree with me in this, but while nature is fickle it must be recognized that the intelligent florist of to-day has every element that goes to make up success in plant culture at his command and under his complete control except that of sunlight alone. And it is a question whether electricity can not be made to do duty even in this direction in the future. Of course accidents are liable to occur, but there are very few so-called accidents that do not imply some bungling on our part to bring them about, either carelessness, forgetfulness, over-confidence in others, bad management or ignorance.

The retailer who hunts about back streets and out of the way places to get cheap rents and then expects to do a big business at small expense will be disappointed. I don't care how choice your stock may be or how cheaply you offer it, the thing can't be done. You must come out into the light where the people are and keep your place bright and shining. Get a corner upon the most populous thoroughfare if you can—it need not necessarily be a large place. But as soon as you allow cobwebs to collect about walls and corners, dust and dirt to settle upon floors and counters, the paper and paint to become soiled and worn or mouldy and dingy, and the general appearance of everything showing signs of decay, that moment your business will begin to deteriorate and you will be on the down grade.

I will not say there are too many in the business, but I do say most emphatically that for a man who does not know the difference between a lily bulb and a sweet potato, or between an orchid and a mushroom, to style himself a florist is a disgrace to the craft, and steps should be taken to prevent such misuse of the title we bear.

A False Report.

EDITOR AMERICAN FLORIST; DEAR SIR: I see in the number of the AMERICAN FLORIST for Dec. 17, under the title obituary, page 403, you announce my death. This false news was published by a German paper. I beg to state that I am very well, and hope you will rectify your information as soon as possible.

Yours truly, VICTOR LEMOINE.

Nancy, France, Jan. 4, 1892.

[Our report was based upon the statement of a gentleman who is in constant communication with the European trade, and we presumed he had his information direct from Mr. Lemoine's family. But we have since learned that his statement was based upon the report in a German paper published at Erfurt and probably the one referred to by Mr. Lemoine. We much regret that the erroneous report appeared in our columns.—ED.]

Washington.

The Executive Committee of the Society of American Florists have come and gone. Their visit was a most pleasant one for the local brethren, and it is hoped equally so for the visitors. The weather was the only unpleasant feature of the event. Three days of rain with but little intermission was the unavoidable program, and on the morning of the fourth day the guests started off in the midst of a snow storm, which would have brought joy to a Canadian.

The local enthusiasm kindled by the presence of so many of the lights of the profession, found its culmination in the banquet tendered on Thursday evening by the National Gardener's Club to the Executive Committee, at the National Hotel. There were present about sixty gentlemen including members of the club, the executive committee and other invited guests. Vice president W. R. Smith occupied the chair.

Toasts were responded to as follows: "The President of the United States," by Maj. H. E. Alvord of the Maryland Agri. College, who spoke highly of the rapid progress being made by the floricultural interests and predicted that in the near future horticulture would occupy a high position as a division of the Department of Agriculture; "Our Commissioners," by Commissioner Douglas; "Our Guests," by Judge C. W. Hoitt; "The Society of American Florists," by Pres. Jas. Dean; "Our Brethren from Abroad," by Mr. J. H. Dunlop; "The Press," by Mr. Knott of the Washington Post; "The Ladies," by Mr. J. R. Freeman; "The Horticultural Press," by Mr. W. J. Stewart; "Our Ex-presidents," by Mr. M. H. Norton; "Our Absent Brethren," by Mr. J. N. May; "Our Finances," by Treasurer Hunt; "The Advance of Horticulture," by Mr. W. A. Manda; "The Columbian Exposition," by Mr. J. T. Anthony; "Horticulture of Washington City," by Mr. John Saul, who said that forty years ago the principal production of the site of the present Botanic Garden was snakes; "The Ethical and Æsthetical responsibilities of the Retail Trade," by Mr. D. B. Long, who was not a bit frightened by the responsibilities of this big title; "The Wholesale Trade," by Mr. P. Welch, who said the subject was rather heavy for a man of his size; "Flowers by Telephone," by Mr. Crandall; "The National Gardener's Club," by Mr. W. R. Smith, who received a tremendous ovation; by Pres. W. S. Clark, who said he wanted to keep the visitors a few days longer, and by Mr. C. F. Hale, who was received with cheers and predicted a great success for the coming convention. One or two bashful members having with reluctancy been excused from speaking, Mr. Stewart was called upon to sing "Annie Laurie," after which the whole company joined in "Auld Lang Syne," and then adjourned.

During the entertainment letters of regret at inability to be present, were read by Sec'y Reynolds from Hon. J. M. Rusk, Secretary of Agriculture; Senators Vance, Wolcott and Gallinger; Hon. J. C. S. Blackburn, J. C. McKibbon, John Thorpe, J. M. Jordan and others. A boutonniere of orchids was placed at each plate, and several handsome baskets of flowers adorned the table.

One of the most pleasing features of the supper and which was commented upon with much favor by the visitors was the presence of so large a number of fine looking young men. It is a good omen when the younger element shows its interest in such an occasion, and the National Gardeners' Club is to be congratulated.

Mr. Manda made a hit when he said that the first planting was done by Adam when he planted his foot in the Garden of Eden.

The health of Mr. Rob't Craig was drunk standing. The unavoidable absence of the Philadelphia friends was much regretted.

There is a splendid specimen of Pandanus utilis variegata at the Botanic Garden said to be the only one in the country.

Mr. Smith has a pair of lively little bantams about the greenhouses. "They're invaluable to us; they see the slugs when nobody else can," says he.

A trip to Mt. Vernon is talked of for the fourth day of the convention next August.

On the occasion of the cabinet dinner to be given at the White House on the 19th inst. the floral decorations will all be in violets. The center piece will consist of a raised placque or shield of purple violets imbedded in which will appear in white violets the American eagle with partially outstretched wings. At each end of the table will be large placques or shields of violets divided diagonally in white and purple while midway between these and the eagle in the center will be large placques of white violets. The permanent oblong center-piece of the table encasing a mirror is bordered on either side at equal distances apart with gilt statuettes about 10 inches in height upon whose uplifted and extended hands small cut glass dishes are borne usually filled with choicest bon bons. On this occasion these sixteen little statuettes will hold aloft thirty-two little bowls of alternately white and purple violets. Placques of violets will be suspended on the walls and the two large marble mantels will be similarly banked high up in white and purple. Festoons of smilax will be appropriately introduced. In place of bouquets the ladies are to be supplied with white silken bow corsage sashes with the guest's name and date of dinner on one lapel and the U. S. coat of arms with the White House on the other, the latter printed from a fine engraving

AGAVE AMERICANA IN BLOOM.

executed at the Government Bureau of Engraving and Printing.

Pfister has his plants in fine order for the coming season and is intently watching his orchids, of which he has several hundred, among them some superb cattleyas and a Dendrobium nobile with 275 blooms on it now, and nearly as many more in prospect. These will be reserved for the diplomatic dinner to be given on the 2d of February next when orchids are to hold exclusive sway. Z.

New York.

The monthly meeting of the New York Florists' Club was held at the usual place on Monday evening Jany. 11, President Dean in the chair. It being the night set for the annual supper no special program had been prepared for the meeting and the routine business was concluded as soon as possible. A communication was received from Mr. Thos. H. Spaulding offering through the N. Y. Florists' Club a silver cup, value $100, as a trophy for the bowling tournaments at the time of the annual conventions of the Society of American Florists.

The conditions are that it shall be open for competition to all regularly organized florists' bowling clubs who shall give fourteen days notice of their intention to compete, to a manager who shall be appointed by the New York Club. Teams shall consist of six men each and the trophy shall become the property of the club which first wins it twice, not necessarily twice in succession. It is also stipulated that it shall not in any case be competed for until after the whole business of the convention shall have been completed. Mr. Spaulding further agrees to offer another cup of equal value, under same conditions as soon as this cup is won by any club.

A communication was received from the Madison Square Garden Company notifying the club that in accordance with other arrangements for the use of the garden it would be necessary that the chrysanthemum show next fall, if held, should close on the evening of Nov. 6; also urging that some kind of an agreement be entered into between the Club and the Garden Co., whereby two exhibitions yearly could be arranged for several years in advance, said agreement to be terminated by one years notice from either party. The committee of arrangements of the club was authorized to take the matter under consideration and make any arrangements which they see fit.

A vote of thanks to retiring President Alex. Burns was passed, and Mr. Burns responded with a little speech.

Messrs O'Mara, Stewart and C. H. Allen were appointed entertainment committee for the ensuing year. Nine new members were added to the roll.

After adjournment the club proceeded to the banquet hall where at nine P. M. about seventy-five members and guests sat down to the annual supper. President Dean, Ex-President Norton, Treasurer Hunt, Secretary Stewart and Messrs Long, Welch, Hoitt, Anthony, Dunlop, Manda and Falconer of the Executive Committee of the Society of American Florists were present. Owing to sickness in the families of several of the more active of the Phila. brethren, the customary contingent from the City of Brotherly Love was absent, much regret being expressed thereat. The table was magnificently adorned with flowers in baskets and vases, contributed by various generous members of the club. There were orchids, nepenthes, roses, carnations, mignonette, tulips etc., in great profusion, also a vase of splendid Wabans from Boston. After the material feast had been disposed of, mental refreshment was in order and many speeches both witty and wise were made by the guests and members in response to the call of Toastmaster Charlie Wethered, whose rotund little figure in its dress-suit was well nigh concealed behind a broad expanse of white napkin. The toast "Our Nights" was responded to by Ex-Pres. Burns in a characteristic manner. The ex-president loomed up grandly in evening dress, but the cigarette did not seem exactly to fit him. Mr. M. H. Norton was called up to respond to "The Society of American Florists", and was melodiously welcomed to the tune of "He's a jolly good fellow". Judge Hoitt followed, his subject being "Our Guests", and President Dean spoke of the "Progress of Our Club". Letters of regret were read from many invited guests, including John Thorpe, H. F. Michell, D. D. L. Farson, A. H. Ewing, G. Oesterle and others. It had been promised that Pittsburg would come "400 strong", but not a solitary Pittsburger appeared.

The hour having arrived for the departure of the executive committee of the S. A. F. for Washington hasty good byes were said and the departing guests sent off with heartiest good wishes. The remainder of the company then settled down to an old fashioned good time to which every one present contributed with a speech, and Fred Weir sang two songs. Finally the toastmaster announced that it was time to close up and go home, the response to which was that the genial Charlie was unceremoniously captured and stood upon the table amid much enthusiasm, where he responded eloquently to the toast "Our Treasurer". His reference to the much discussed flower market, however, settled for the time being, all hope of going home, for it brought to the floor Geo. Stumpp and Lawrence Hafner in a discussion of that disturbing subject, and when the contest waxed cool between these two Mr. John Taylor sailed in and kept the thing a-going. It was a great night.

The cut-flower market has been in a very quiet state during the past week. Fortunately there are not many flowers coming in just now, so the light demand does not work havoc with prices as it would were stuff in full crop. There is a fine supply of good Harrisii lilies now in. Tulips are improved but slightly, and are far from being good and very few of them are sold. Lily of the Valley from this season's pips is very poor, being pale and sickly looking, with almost no leaves. There is some of the old crop still being cut and this is very fine. Yellow narcissus sells well although not yet of best quality. White narcissus is dead stock. Roman hyacinths are doing fairly well. Some of the violets now coming in are superb. The cut of violets seems to just

about equal the demand. There is a good supply of fine Cattleya Trianæ blooms. One window on Broadway makes a grand show of them, but the effect of their beauty is half destroyed by suspending them in cheap looking green glass bottles.

Jos. Mallon & Sons had a great wedding decoration over in Brooklyn on the 12th inst. Both house and Church were profusely decorated with roses and orchids in unlimited quantities.

Winfried Rolker, always genial and willing to discuss trade interests, speaks pleasantly regarding the volume of the supply trade up to date and hopefully as to the coming seed and supply trade for spring. The German prepared cycas leaves seem to give general satisfaction.

Alex. McConnell, speaking of the late James Taplin says that a few years ago when in England he visited the estate of the Duke of Devonshire where Mr. Taplin was in charge years ago. Seeing an old grey headed man working on one of the roads he ventured to enquire of him whether he remembered such a man as Jas. Taplin. "Did I know him? Indeed I did, sir, the best master we ever had, sir," was the reply.

Theodore Roehrs has the condolence and hearty sympathy of all the trade in the loss by death of his little four year old child.

Philadelphia.

The first snow storm of the season came Jan. 5th. It was not one of the old fashioned kind, but served to put a wintry appearence on the face of Nature. Flowers always seem to be more appreciated in such weather and as a rule sell better.

The January meeting of the Florists club was largely attended. The library being in course of renovation the meeting was called to order in one of the adjoining rooms, Mr. Lonsdale presiding, as Mr. Robt. Craig is not able to be about.

The paper read by Mr. Grigg on the "Commercial aspect of the Florists' Business in Philadelphia" was received with marked attention. Mr. Grigg covered the business in its various departments very thoroughly and his remarks will be found applicable to every large city; a great many of the suggestions if carried out, would no doubt be very beneficial to the trade.

A. M. Herr of Lancaster, exhibited a vase of carnations, beautiful specimens of Daybreak, a pink variety of good size and substance. He has great faith in it and will devote several houses entirely to it next season.

An invitation to the club to participate in the annual dinner of the New York Florist's Club Monday, Jan. 11th, was received and accepted.

The following gentlemen were elected to membership:

J. W. Bitner, of Lancaster; A. M. Lawson, Chestnut Hill; F. W. Clinton, Edward Mason, Wm. Dunning, of Phila.; Charles Hopham, George Santman, of Wyndmoor; R. M. Eisenhart, of Holmesburg; and Wm. J. Stewart, of Eastern U. S. W. R. Smith, Chief of Botanical Dept. at Washington, was nominated for honorary membership.

The following gentlemen were nominated for election at next meeting: John E. Andre, of Doylestown; Redding G. Palmer, of same place, and George Rauch, John Crawford, Wm. F. Zeibel, of Phila.

John Plender died Jan. 8th, after a short illness; he was 62 years of age. Mr. Plender was a hard worker and successful in his business. His first experience was with John Dick, he having been a pedler before that time. He managed Mr. Dick's city store for some years, and about 1870 he opened out for himself at No. 10 North 12th St., where he carried on a successful business for fifteen years, when he removed to 26th and Girard avenue. His specialty was funeral and church work. He leaves a wife but no children.

The First Assembly Ball, the event to which florists have been wont to look forward to in the past with a great deal of interest, took place Jan. 15th. It is one of the two fashionable balls given by the Elite each season and which are very exclusive.

Some few years ago the Assembly balls came next to the holidays in point of business, and Boston and New York were drawn on largely to supply the demand. At that time every lady who attended the ball carried flowers, now only the "Buds" are honored, and in consequence there is a great falling off in the number of bouquets and a like depression in the spirits and bank accounts of the florists. One firm alone had a list of over 250 bouquets for one Assembly ball some years ago, which was more than twice as many as were carried on this occasion altogether.

That it might be of interest to the trade as showing the popularity of certain flowers, the following is a description of the bouquets carried: The Mermet was first, there being 25 bunches of this lovely rose, of this number probably ten had lilies of the valley sprinkled through, or in spots, with hyacinths in a few, but the most were of the roses alone. La France came next with twelve bunches, some with valley. The Bride was seen in ten bouquets, some with spots of red and pink roses. Five bouquets of orchids represented this rival of the rose, while quite a number of rose bunches had a fair sprinkling of orchids through them. There were five bouquets of Bennetts; four of American Beauties; four of Laings, three of Magnas, three of Brunners, three of Woottons, three of violets, two of valley, two of Perles, two of Cusins, two of Jacques, two of Waban, two of Sunsets, one of daisies, and one of yellow tulips.

Nearly all had ribbons to match the flowers. Some bunches were small, but the great majority were large, containing from three to five dozen roses. One bunch of hybrids contained 36 fine flowers, while most of the others had two dozen in them. In price they ranged from $5 to $35, the popular price being $10.

Hugh Graham had the decorations. Palms, large white azaleas, Harrisii lilies, poinsettias and tulips were largely used, together with smilax and laurel wreathing.

Business has been quiet the past week, the weather being very bad for producing cut flowers. Mermets and La France are very poor in color and if not sold one day were of no use the next. Prices are down a little.

Charles Fox is down with the lumbago. Mr. Fox is a hard worker, but he had to lay up for repairs. We hope to see him about soon.

Robert Craig is somewhat better, but is still confined to his room and in bed most of the time. He has had a hard time of it. Things about the place look well, the new house of carnations being very fine. Lizzie McGowan has made many friends about here. The fine house of cyclamens before mentioned is nearly empty. The way to sell plants is to grow them fine, they will sell themselves.

SEND IN your order now for a copy of our new Directory, to be issued next month. Price $2.

Chicago.

Several of the Cemeteries around Chicago have gone into the business of raising flowers for market and large consignments from some of them have at times had a depressing effect upon the market, whereat some of the growers are asking whether these companies have any right to enter into competition with them, being exempt from taxation. The matter was brought up in the Florist Club and a committee is looking into the matter. This committee will report at the next meeting, and if their report shows that the companies have exceeded the powers conferred by their charters, the matter will be followed up. If, as is alleged, these companies pay no taxes, then it is certainly unjust for them to be permitted to come into competition with those who bear their share of the public burden.

At the last meeting of the club a committee of five was appointed to act with a committee from the State Horticultural Society in an attempt to secure a larger share of the State appropriation for horticulture and also to advise with those who will have charge of the State building regarding the floricultural display in and around same.

At this meeting Mr. J. C. Vaughan showed two plants of the new dwarf calla, Little Gem. One plant was in bloom and neither exceeded eight inches in height. They attracted much attention and were voted a very taking novelty.

At the first February meeting of the Club Mr. Charles Hartwig will read an essay on the comparative profitableness of roses and carnations to the cut flower grower.

An accident to the heating apparatus at the greenhouses of Mr. O. P. Bassett at Hinsdale last week came very near being serious. Before repairs were successfully made the thermometer had touched the freezing point. But everything is now in running order again. Mr. Bassett left last Friday for California, where he will spend the remainder of the winter.

For the past few weeks Mr. Albert C. Hopkins, president of the Pansy Society of America, has been in the city in the interest of the pansy as the national flower. He has made at various points in the city displays of paintings of the national flowers of other countries and of the various candidates for national flower of the U. S., in addition to U. S. flags with the stars arranged in the form of a pansy. Mr. Hopkins is very enthusiastic and is confident that he will succeed in securing the adoption of the pansy as the national flower of the United States by 1893.

There is little change in the flower market. Stuff of all kinds, and white in particular, remains scarce. In roses the quality of some varieties is improving. Mermets are showing a good deal better color and are of average size. This rose, by the way, is the only sort quite plentiful. Large quantities are worked off in funeral pieces, partly owing to the scarcity of white roses and partly from the fact that many flower buyers nowadays prefer a little delicate shading of color in arrangements of this kind. Woottons as seen in our market are a failure. The flowers are small and mostly off color. Gontiers on the other hand are fine this season and prove a great favorite with flower buyers. If shown side by side the Wootton stands a very poor show, for nine times out of ten the customer will prefer the Gontier. A few choice lots of La France are seen, but the average falls below the standard. Brides are in great

demand. The quality is fair, but good or bad they sell readily at top prices. Perles are still very scarce, which seems strange, as this rose is generally the most abundant sort in the market. The same may be said of Niphetos. Since the advent of the Bride this old standby has taken a back seat. Very few are growing it this year. Beauties are becoming a little more plentiful, but are of inferior quality, with few exceptions. In hybrids we have a few Magnas which take but poorly.

Of carnations the supply is large and of very good quality and the demand for this flower is equally good. Of the colored sorts Tidal Wave easily takes the lead. This variety is uniformly well grown and some lots are really superb. Portia comes next, also very fine. Garfield has been backward, but is beginning to exert itself again. In white Lizzie McGowan stands first, but very few flowers are grown here as yet of this variety, and more is the pity; Silver Spray supplies the bulk of this class. A few Lamborns and Mrs. Fisher are showing up well. In pinks Grace Wilder is plentiful, but with few exceptions the quality is poor. You may pick up a bunch of 100 and not find one perfect bloom, the calyx of every flower being burst. Annie Wiegand and Daybreak grown in small lots are fine; let us hope to see more of them.

Violets are very scarce and in great demand. In bulk stuff of all kinds the supply is very light. Valley is getting better, but there is plenty of room for improvement yet. Romans, Paper Whites and freesia meet with ready demand. Tulips are coming in, but are very short stemmed and sell poorly. Harrisiis are plenty and very fine.

Toronto.

The Gardeners' and Florists' Club is no more, but in its place there is now the Gardeners' and Florists' Association with a brand new constitution and over 100 members in good standing with life and vigor enough in them to make things hum this coming year if they will stick together and work with a will. The change from "Club" to "Association" was made for several important reasons, chief among which was the undeniable fact that if ever the organization wished to ask any favor of the Government (which is not at all unlikely) "Association" would be a more impressive name than "Club", the latter being often used for organizations with not particularly elevating objects in view. First impressions stick in some peoples' gizzards a long time and might seriously prejudice a good cause. There *is* something in a name.

Botanic Gardens are now being seriously agitated for and measures are now being taken for all the societies in the country who are interested in the matter to take concentrated action. Almost all the British Colonies, big and little have Botanic Gardens, but Canada, the biggest of them all, has not yet even a nucleus for one. The Association certainly ought to make a big push in this direction this year and with the aid of the other Societies impress the Government with the necessity of its doing something if it is only to make a beginning.

A chrysanthemum committee has been appointed and instructed to compile a prize-list for the show of 1892 and submit to the Association for approval at its next meeting.

Mr. Geo. Vair laid several very fine orchid blooms on the table at the last meeting of the Association, amongst which were Angræcum sesquipedale, Cœlogyne cristata, etc. At every meeting some one of the members brings a specimen or some specimens of various flowers and lays them on the table for inspection and it was moved by Mr. Gilchrist and carried that the President appoint a committee every meeting to report on the flowers brought. A meeting or two ago Mr. G. Hollis of Davenport near Toronto, brought a specimen of a very fine and large white carnation he had raised from seed hybridized by himself. By means of this committee any worthy object will receive the notice it deserves.

It is reported that the florists here intend to follow the example of a well-known grower, etc., in Pennsylvania and will have specified on their bill and letter-headings their particular vocation. There will be besides carnationists and rosierists, smilacists, palmists, violettists, mummists, (or mummers), pansierists, felicierists or polypodiacierists. E.

Buffalo.

Our city has had more than its share of snow this past two weeks; almost 30 inches fell in three days. It has not stopped the sale of flowers yet, and a few clear cold days has much improved the quality of roses (especially Mermets) grown in this neighborhood. It seems warm and cloudy weather is the most unfavorable for the production of good roses. Tulips of very fine quality are plentiful in the florists' windows with only a limited demand for them.

A recent visit to the house of James Milley of Masten St., brought out the statement from son William that they had had experience enough with Mrs. Fisher carnation. We all have the same story to tell. It is a fine white flower, but the plants die one after another. This may be peculiar only to this neighborhood. It renders this fine variety valueless to us. Mr. Milley takes the premium on growing that most useful Begonia "incarnata grandiflora" (is this right Mr. Falconer?); his flowers and foliage have more color and substance than we have ever noticed elsewhere. What an indispensable thing this is for mid winter use, either cut or as pot plants? Mr. M. has also some fine plants of B. "semperflorens gigantea rosea." This is a grand and showy plant and well adapted for a window plant.

J .F. Cowell (of blue chrysanthemum fame) has by careful selection from various sources obtained a strain of primula that is hard to beat. Some of the world famous strains of Europe are "not in it" by the side of the Professor's.

Mr. D. B. Long attended the annual banquet of the New York club and no doubt took the opportunity to personally thank the New Yorker's for their very kind invitation sent to our officers and members.

Business among the craft generally rather quiet outside of what the Grip is doing for us. For this season large entertainments are scarce. Rumor has it however that from now till Lent the happenings among Buffalo's "400" will be quite gay. G. S.

St. Louis.

Business remains quiet. Flowers are plentiful and prices steady. Pandanus utilis and palms in variety are selling well.

The firm of Rieman & Chandler, doing business at 717 Olive St. and 218 North Grand Ave., has been succeeded by the Chandler Floral Co., incorporated with a capital stock of $2,500.

Last Thursday's meeting of the Florists' Club was interesting and well attended. There were several new members elected. The committee on "Crape Pulling" reported as follows: Resolved, that the St. Louis Florists' Club condemns the practice of soliciting orders for flowers of bereaved families, and, would also recommend that all growers, wholesale and retail dealers refuse to furnish flowers to those that are known to be engaged in what is known as "Crape Pulling". The resolution was unanimously adopted.

Mr. Jordan led an interesting discussion on roses. His experience tends to make him think that the American Beauty should be somewhat starved as regards quantity of soil, and should not receive much fertilizer.

A specimen of Stanhopea Wardii opened its beautiful and strongly perfumed blossoms at the Missiouri Botanical Garden, on the 14th. On the third day from opening the perfume was gone and the flowers showed signs of decay. The ephemeral nature of all the thirty or more species of stanhopea of course detracts from their value as cut flowers, and also makes them somewhat undesirable for small collections. S. Wardii blooms with us about three times each year making a good illustration of the free blooming habit of this beautiful genus.

The Garden has a very fine collection of agaves, century plants as they are commonly known. In this collection is at least one undescribed species. This fact was discovered last spring, when a plant formerly known in the garden as A. attenuata subdentata came in bloom. An agave is blooming now. It may be A. Nissoni, but this is doubtful. The lenghth of its flower spike is nine feet and nine inches, and from the bottom of the tub the full length of the plant is eleven feet and three inches. This agave started to bloom on Jan. 6th and will probably continue in blossom for several weeks yet. The flower spike started to grow fifty-seven days before the first flower opened. In twenty-four hours the maximum growth was 4 and 15-16 inches, the minimum $\frac{3}{8}$ of an inch, and the average 2 and 1-11 inches. The yellow flowers are thickly placed in twos and threes on the spike. J. W. D.

Boston.

A week of rainy weather with dog day temperature has not been conducive to great activity in the cut-flower business. Roses are in fair quality considering the weather, carnations are excellent, and violets are of good average size and color. There are but few extra fancy roses in market, the general demand for hybrids and American Beauties being too uncertain to encourage the growth extensively of these at so early a date, but there are some very fine crops in shape to come in later. Marguerites, nasturtiums, golden coreopsis and such odd little things are to be seen in all the florists' widows here and they add much to their attractiveness besides selling very well. There are some good azalea plants coming in now from the local growers.

The wholesalers report a good steady shipping trade ever since the holidays, with a strong demand for white flowers.

There are rumors of one or two new flower stores which are to be started in the city.

The members of the S. A. F. Executive committee have all returned from Washington with the appearance of having been well-fed and carefully cared for. The recently married member made a bee

line for home as soon as he struck town. The others got home at their leisure.

Hartford & Nichols are mourning the loss of $75 and a clerk. The clerk would not have gone without the $75, and the $75 would not have gone without the clerk, so they must have both gone together.

Newport, R. I.

The annual meeting of the Newport Horticultural Society was held Jan. 13, when the following officers were elected for the ensuing year: President, Andrew K. McMahon; first Vice President, James McLeish; second Vice President, Lucius D. Davis; Recording Secretary, John J. Butler; Financial Secretary, Alexander McLellan; Treasurer, Richard Gardner; Sergeant-at-arms, William Smith.

The society is in a sound financial condition and is constantly adding new members to its roll. The very fine display of chrysanthemums made at the last exhibition was the means of bringing in some members who are not gardeners but have a fondness for plants and flowers and wish to assist the organization as far as it lies in their power.

If satisfactory arrangements can be made the society will hold a rose and strawberry show next June; an appropriation has already been made for this purpose. An exhibition of palms and orchids to be held on the Casino grounds has been favorably talked of and, if the governors of the Casino will co-operate with the society and the necessary outside encouragement is guaranteed, a show of this kind will be held. The society has completed its schedule for next fall's chrysanthemum show.

JOHN J. BUTLER, Sec'y.

Montreal.

Trade has not been any too good here since the holidays. Everyone says "things are quiet." Mr. "Grip" is probably to blame for this state of affairs. The regular monthly meeting of the club last Tuesday was fairly attended, Jules Betrix giving a short essay on the amaryllis and W. Wilshire on table decoration. The latter subject was to have been taken by C. Campbell, but Colin failed to show up. The advance list for the mum show was read and left for one month before being printed.

Wm. Cooper disappeared suddenly about two weeks ago, leaving a few dirty pots in the store to pay his debts.

Genial John Walsh was very bad with grip and has not quite recovered yet. His father has just died of the same thing at Greenfield, Mass.

A question for a carnationist: What is the reason that Garfield so often goes single? Is there no remedy? This question came out of our question box at the meeting and no one could give a satisfactory answer. J. B.

Minneapolis.

Christmas trade was very much better than last year. There was a good supply of flowers but everything was sold out. There are very few flowers made up in bouquets and baskets now, most all flowers being sold loose. Holly and lycopodium is mostly handled by commission men, who sell retail same as wholesale, which gives retailers a small chance.

New Years trade was much better than last year. Everything was sold out so close that for two days after it was hard to get even a few flowers. Trade has been dull through the winter. N.

News Notes.

MUSKEGON, MICH.—C. L. Whitney has opened a down-town retail store here.

PORT LEVACA, TEX.—Mr. J. VanDoyen is preparing to establish a nursery here.

IOWA CITY, IA.—Bad weather and grippe made holiday trade poor. Flowers were plenty.

BALTIMORE—Brackenridge & Co., who have long had greenhouses at Govanstown, have opened a city store at 304 W. Madison St.

SEA CLIFF, L. I.—Mr. Ferdinand Boulon, the nurseryman and florist here, has been dangerously sick of pneumonia, but now is improving favorably.

KANSAS CITY, MO.—Our Christmas trade was considerably better than last year. Prices good. Stock much finer and more plenty, though still not equal to demand. Palms, ferns, and Romans in pots sold well.

ALBANY, N. Y.—Among the numerous floral tokens received by the members of the legislature at the opening session was an immense tiger gay in stripes of red and white carnations, which was sent to Senator Hagan by the Anawanda Club.

WATERLOO, IA.—The most satisfactory holiday trade of an experience of ten years. Refused to take an order except what could fill out of my own house (which did not supply one-fortieth of the demand). Result: No kicking over stale flowers and exorbitant prices.

PALO ALTO, CAL.—The series of popular lectures at the Leland Stanford Junior University begins Feb. 15. "Insects injurious to fruit in California" is one subject. At the same time a series of lectures on fruit growing will be given by Mr. Emory E. Smith, editor of the *California Fruit Grower*.

NEW ALBANY, IND.—F. Walker & Co. have at this date a good supply of chrysanthemum blooms and expect to have a supply until March. This firm has built during the last year a fine house 20x146, for roses, and put in an additional steam boiler. They will build an additional house next summer.

WINONA, MINN.—Holiday trade was very good. Not enough roses to supply demand. W. Smith has closed his greenhouses. He says it don't pay him to heat them. He will start a cut flower store here. The woodlawn Cemetery Association has erected two greenhouses, 11x70 each, to grow bedding plants for their grounds.

QUEENS, N. Y.—Mr. William Falconer of Glen Cove, has purchased a fine property close by the R. R. station here. It consists of a 20-acre square block of level, fertile land lying between the railroad and turnpike, with a 1,000 ft. front on the main street. There are a dwelling house, barns and other buildings on it. As Mr. F. does not intend to occupy it himself he has rented it to a market gardener.

SHEBOYGAN, WIS.—Cards are out announcing the wedding of Miss Lizzie, daughter of florist Otto Schucht, Jan. 26. Miss A. Schucht, who has been so successful in conducting the retail store, has retired from the business and her place will be taken by her brother William. The latter is also counting the days between now and his wedding day. Currie Bros., of Milwaukee, have established an agency here.

LITTLE ROCK, ARK.—At the last meeting of the Little Rock Florists' Club officers for the ensuing year were elected as follows: J. W. Vestal, Pres.; M. W. Herron, Vice-Pres.; D. M. Tipton, Sec'y; Chas. Vestal, Treas. After quite a discussion it was decided to have a chrysanthemum show next fall. Christmas trade was as good as last year for loose flowers, the call being mostly for roses. Hyacinths were dull. Very little made up work; less than ever before.

UTICA, N. Y.—There was a large attendance at the meeting of the Utica Florists' Club Jan. 6. Mr. Wm. Mathews read a very able paper on "Follies of Plant Growing," pointing out in a manner not to be mistaken the dangers attendant to injudicious culture. He spoke of the evil of overgrowth, which over-stocks the market, and as a result creates low prices. He thought it far better to have the production less. He also urged the cultivation of the best class of plants and the abandonment of poor varieties. The sentiment of the address seemed to be fully agreed with by those present. The club is a most prosperous organization. A popular and valuable feature is the question box, conducted at every meeting.

Diseased Roses.

I wish to ask through the columns of your valuable paper, if you or any of your subscribers can inform me what is the matter with my roses. I never heard of such a thing as flowers having the grip, but it looks as if my roses had a touch of this universal disease. The plants appear to be healthy, but when they make young leaves, a small spot of a yellowish green color comes on them. On the side of the leaf, where the spot appears, the leaf does not grow much, but the rest of the leaf keeps on growing, which makes the leaves have a dwarfed appearance. The flowers also are not perfect in form, the crop is light, some of the smaller young shoots do not hold their buds, but drop them, also the plants seem to grow very slowly, as this complaint seems to affect the whole bush. I have asked my neighbors, but no one seems to know what it is or to know of any remedy. If you or any of your readers can give me any information they will confer a favor on an old subscriber.

J. K.

Diseased Violets.

ED. AM. FLORIST: Will you kindly make inquiry in your paper as to the nature of a disease which is at present affecting certain kinds of double violets. A blight seems to come suddenly on the edge of the leaf, which turns black and then white, and gradually rots away. There are no spots, as in the case of the single violets which have the decease.

Double violets in frames propagated at the same time as those in the house, and grown in the same ground during the summer, are not diseased. J. L.

TO THOSE who have been looking for a continuation of Mr. Menand's recollections we would say that we shall undoubtedly present another installment in next issue. We expected to certainly be able to continue the recollections in this issue, but pressure of news matter has forced us to lay over for still another week, this and several other articles.

CARNATION
GOLDEN TRIUMPH.

A Seedling of 1888. Makes a fine plant and gives beautiful flowers.

Answers to Queries.

ED. AM. FLORIST: I note "Some Queries," page 463 of Jan'y 7th issue, on carnation growing. I expect you will have replies from several expert specialists on this subject, but feel tempted to offer you the best results of 20 years experience in this neighborhood. In this big country (geographically) the same rule will hardly apply to all sections alike. Time of lifting and perhaps propagating must I think differ between St. Paul, Minn., and Atlanta, Ga., or even between Western New York and Chester Co., Penn. Your enquirer, "E. G. B.," does not give us the locality he expects to operate in, and now for the experience.

Question 1. This applies to any florist establishment for whatever it is used. All boiler pits should be floored with brick or cement and walls of brick or stone. It will be much money saved in the end and is absolutely safe.

2. The chimney for hot water boiler should not be less than 16 inches square. This gives one brick thickness and an 8-inch flue, which should be well plastered inside and built one inch at least away from any wood work.

3. The best results have come from three-quarter span houses facing south or still better a little east of south; 22 feet is the most economical width, giving three narrow paths and four convenient benches.

4. I much prefer the benches to solid beds.

5. After trying various depths of soil five inches gives me the best results and with a proper dressing in the month of April will carry the plants through in good shape till time to plant again in fall. Have had fine crops of carnations grown in many different textures of soil, but prefer a yellow loam rather on the stiff side with an addition of one fifth of rotten hotbed manure. The boards of the benches should be 5 or 6 inches wide and one quarter or half an inch apart.

6. The distance between plants must depend upon the size of plants when lifted from the field and also whether you intend to grow them till Easter only or to carry them through the summer, and some varieties need more space than others. Ten inches is a good average space between plants; with good care they can be grown eleven months on the bench at this distance.

7 and 8. A good healthy stock of carnations and the proper cuttings will strike in any cool house with or without bottom heat, but an ideal propagating house for carnations would be where the temperature of the house was 50° and the sand 65° and shaded only from bright sun. I do not believe in those dark north side places so often used.

9. You should take cuttings for your own use, the same as you would to sell and that only the best. The top of the long shoot about ready to show buds is not the right cutting, neither is that stubby thick growth from the base of the plant any good for a future healthy plant. The cutting to produce a thrifty, fast growing and early blooming plant is the side shoots you get from the flowering stem. But varieties differ greatly in their growth and only experience will teach you how to handle different kinds.

Buffalo, N. Y. WM. SCOTT.

A BOUND COPY of Vol IV of *Garden and Forest*, has been received from the publishers, New York. This handsome weekly maintains its high standard and is a credit to American horticulture.

SITUATIONS, WANTS, FOR SALE.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

American Seed Trade Association.

The Executive Committee of the American Seed Trade Association met January 18 at the Sherman House, Chicago.

There were present President Barteldes, Messrs. Bushnell, Willard, Leonard and Secretary Don.

An outline programme was prepared covering several important topics of interest to seedsmen which it is believed when carried out will make the coming meeting at Hartford one of the most interesting and valuable sessions ever held in the history of this organization.

President Barteldes reports a brisk wholesale trade at improved prices. He says that when Ohio dealers inquire for Wardwell's Kidney Wax Beans in Kansas it is an indication of scarcity.

MR. ROBERT GEORGE has been suffering from an attack of the grip for two weeks or more.

MR. WM. F. EVANS of Montreal is in a serious condition from a partial stroke of paralysis.

THE SIBLEY Seed Warehouse at Rochester, N. Y., valued at $50,000, was destroyed by fire January 12.

RICHMOND, VA.—The buildings on the place occupied by T. W. Wood & Co. were destroyed by fire a few days ago, at a loss of about $5,000, upon which there was $3,500 insurance.

ROCHESTER, N. Y.—An over heated furnace set fire to the woodwork in one of the greenhouses of Crossman Bros.' seedhouse on Monroe avenue on the evening of January 8. Loss on plants and seeds about $500.

Catalogues Received.

Wm. Elliott & Sons, New York, seeds and bulbs; Gause & Bissell, Richmond, Ind.; plants: Benj. Grey, Malden, Mass.; aquatics: James Vick's Sons, Rochester, N. Y., seeds and plants; Plant Seed Co., St. Louis, seeds; Robert Owen, maidenhead, England, chrysanthemums; E. M. Cole, Pella, Ia., seeds; Thos. H. Spaulding, Orange, N. J., chrysanthemums: Griffith, Turner & Co., Baltimore, seeds and tools; The Cottage Garden, East Moriches, N. Y., carnations, chrysanthemums and pansies.

MESSRS. ENDRIS & GRESSER, Havelock, Ill., send us a bunch of lily of the valley of splendid quality, the best we have seen this season. Also a bunch of violets of good quality. They say that they have never had the disease in their stock.

TO FLORISTS, JOBBERS AND MARKET GARDENERS.

UNITED STATES NURSERIES.

Early in the spring of 1891, we were fortunate in placing large contracts with responsible growers for quantities of all kinds of Vegetable and Flower Seeds, which places us in a position to quote advantageous prices to the trade in general. Florists, Jobbers and Market Gardeners would do well to send us their list of wants in this line especially, for prices, before our large stock becomes depleted.

Our stock of EXTRA EARLY PEAS is the most select and best that can be had in the country; superior to most stocks sent out under fancy names and seal; and all other leading kinds; such as: **Champion of England,** the favorite marrow. **Advancer,** half dwarf, second early; best market pea. **Little Gem and American Wonder,** best dwarf peas in cultivation. **Pride of the Market,** large handsome pods. **Telephone,** best late pea grown.

Our large stock includes also selected stocks of the following, which can be relied upon for absolute pureness and high germination. **BEANS, Extra Early Red Valentine,** the snippers' favorite. **Mohawks,** the earliest green flat pea. **Long Yellow Six Weeks, Improved Golden Wax,** standard sort, rust proof. **Wardwell's Kidney Wax, Flageolet Wax,** largest podded wax varieties, much grown by southern shippers. **Golden Eye Wax,** stands all kinds of seasons and is most salable.

CABBAGE. All Long Island grown, from originators' stocks. **Jersey Wakefield, Early Summer, Succession, Late Flat Dutch,** the four best kinds in existence, and no others should be sown where a succession is wanted.

CUCUMBER. White Spine, the best kind for general use. **Extra Early Green Prolific, Boston Pickling,** most useful and profitable p ckling sorts.

LETTUCE, Curled Simpson, best curled early variety. **Boston Market,** excellent for forcing. **New York,** the only kind to cultivate outside.

ONIONS. Although one of the scarce articles this year, we are well stocked and can quote prices on the following kinds, guaranteeing high germination. All localities have their favorite kinds. We simply mention the leading well-known varieties: **Red Globe, Yellow Globe, Danvers, Red Weathersfield, White Globe, White Portugal, Spanish King, Extra Early Red, Southport's Yellow Globe.**

RADISH, Geckert's Chartier, most profitable summer radish. **Early Round Dark Red,** earliest and best turnip variety. **French Breakfast,** very popular, oblong, white tip. **Early Scarlet Turnip,** French seed, choice stock. **White Tipped Scarlet Turnip,** market gardeners' favorite. **Yellow Summer Turnip,** useful summer kind.

SALSIFY. Mammoth Sandwich Island, much improved stock.

SPINACH, Large Thick Leaved, the best kind to plant.

SQUASH. The following kinds are too well known to require description, but it is safe to say the best and most useful in cultivation. **Boston Marrow, Summer Crookneck, White Bush Scalloped, Yellow Bush Scalloped.**

TOMATO, Acme, a favorite with shippers. **Mikado,** large, irregular in shape, but very solid. **Favorite,** good standard sort. **Early Ruby,** earliest of the large; good kind. **Table Queen,** solid and large. **Perfection,** excellent shipping sort.

TURNIP, Extra Early Milan, the earliest variety in cultivation. **Red Strap Leaf,** standard sort. **Improved American Top,** the best.

ALL FLORISTS' SEEDS AND REQUISITES.

W. ATLEE BURPEE & CO., Philadelphia, Pa.

1892.

1892.

For Over Thirty Years

we have always had very pleasant dealings together, the public and myself, and I again have the pleasure of presenting to them my Annual Vegetable and Flower Seed Catalogue. It contains the usual immense variety of seed, with such new kinds added as have proved to be real acquisitions. Raising many of these varieties myself, on my four seed farms, and testing others, I am able to warrant their freshness and purity, under such reasonable conditions as are contained in my Catalogue. Having been their original introducer, I am headquarters for choice Cory Corn, Miller Melon, Eclipse Beet, Hubbard Squash, Deep Head, All Seasons and Warren Cabbage, Etc., Etc. Catalogue **FREE** to all.

QUEDLINBURG, GERMANY.

Suburban Flower Stores and Display Rooms for the Country Florists' Use.

MR. EDITOR:—The query is ours and possibly of others of your readers, what kind, size and shape of building, what manner of arrangement of the interior of same will give at once a structure substantial and artistic and furnishing a convenient office room for the needs of the average suburban florist, and what will give, as well, a show room for his flowers and requisites pertaining to the business and suitable counter space for his cut flower work and room for waiting customers, also provide for a cold storage room and facilities for show cases, etc.

That there are those in the business who have thought out to completion such buildings suitable for above suggested purposes and are now using same is undoubtedly true. That there are others who are in need of some such structure is also apparently true. May not the latter, your readers and patrons, invite through your columns from the former working descriptions of these buildings, referred to with the presentation of cuts, possibly, illustrating their ideas and plans with any suggestions of additions or changes that might be pertinent to the inquiry?

The present writer can see the desirability of such a building, in its interior possessing a form not only a stable and business-like one in its construction, but artistic in its architecture, something in keeping with each locality and suggestive of the business carried on within. Whether such a store is to be built among other stores on some main street or to be joined to ranges of greenhouses more in the suburbs is a factor for consideration. The show windows and main entrance would naturally call for close attention in design for effect and use. The interior arrangement of sales and work counters, show cases and refrigerator, with chances for desks and a convenient office or waiting room are seemingly matters of practical importance for quick, easy and economical work.

Contrivances for keeping moisture and smoke passing from the greenhouses to such stores when they are connected together is also a thought of some moment.

That some of our florists who already have supplied themselves with these structures kindly favor your readers with such data, descriptions, plans and suggestions as will enable others to go and do likewise, better when possible, is the suggestion and wish of the writer.

Treatment of Poisoning from Primula Obconica.

As to poisoning with Primula Obconica I would say that the application to the affected part of a strong lather of common yellow soap has relieved all cases I have seen and those have not been few. Take a bar of common domestic soap and with a shaving brush make a strong heavy lather and with the brush paint it on to the part affected. Put coat on coat until a coating at least 1-16 of an inch thick has dried on. This keeps out the air and seems to draw out or neutralize the acrid fluid of the primula that causes the trouble.

The poison is found in a minute gland or bulb at the (outer) ends of the hairs or "spines" that grow on this variety of primula. The gland contains an acrid fluid that is carried into the blood by the piercing of the skin by these hairs or spines in exactly the same way the poison of the honey bee is carried by the bee sting. The disease caused by the primula is a species of erysipelas. If the soap fails then get from a homœopathic physician or pharmacy a small vial of their preparation of Rhus Toxicodendron and take it as they will direct. This will neutralize the poison in the system if it has penetrated beyond the integument.

A GROWER OF PRIMULAS.

Special Attention.

First Importation of the Season of 100,000 pounds of

CYCAS REVOLUTA,

in sizes from 6 inches to 6 feet, guaranteed to be the only TRUE LONG-LEAVED VARIETY, which for beauty in foliage is far excellent to any of its kind; fast becoming a most favored Palm, highly recommended by most leading nurserymen and florists.

By weight, fronds and roots cut off.

Price, not less than per 100 lbs. $10 00. Per 1000 lbs. $85.00, f. o. b.

Extra inducements on larger lots.

KELWAY & SON, LANGPORT, ENGLAND.

J. Horace McFarland Company.

INCORPORATED 1891.

How does that look? It means that I have got to say "we" now, because there are more of "us"; but I'm in good company, I believe! Well, then, "we" are bigger than J. H. McF. all by himself, and we've enlarged, increased and extended his facilities for doing the right sort of printing for florists and the other plant and tree people. A fine new electrotyping outfit and a lot of other new machinery will help the Company to keep J. H. McF. hustling after work, and doing it! The florists are responsible for this move, and they want to notice that we're ready to do Catalogues in great shape at the Mount Pleasant Printery, and do them on time. Write to

J. HORACE McFARLAND COMPANY, Harrisburg, Pa.

[*P. S. by J. H. McF.*—The "we" will go better after a bit. Just notice that I'm right "in it" yet, at the same old stand, and the others are helping me to do better for all of us, and you!]

Putting Plants to Sleep.

I find the following in a magazine of eight years ago:

The eminent physiologist, M. Claude Berrard, has lately made a number of experiments which proves that etherization acts on plants as well as on animals. All vital acts whether in the animal or in the plant, may be anæsthetized. Thus, in plants, germination is arrested by the use of ether. The author proves this in the case of cress introduced into a tub with ether. The germination was stopped; on removing the ether, however, it began again. It was not a case of death but only anæsthesia. The same occurred in other plants, and even with ferments, whether of plants or animals. Thus, beer yeast in contact with ether for twenty-four hours, is thrown into sleep, from which, however, it awakens when the etherization ceases. M. Bert, in his experiments on the influence of oxygen on living things, killed the yeast. M. Bert observes that, as regards a sensitive object, we should distinguish its provocable movements and its spontaneous movements. Under the influence of etherization it is only the former that are arrested, the others still going on.

Can we not press ether as well as electricity into our service? I do not see why we should not gain practical results from experiments in anæsthetics as well as electricity. For instance, could not plants be exhibited in their successive stages of growth and flowering, whilst under "the influence"? Think how convenient it would be, if you had something choice and rare coming in too soon for exhibition, to be able to send it into a trance until it was needed. Or an orchid that declined to rest, what gentle persuasion we could use. Again, we often hear of the difficulty of importing choice plants, could we not devise some practical plan for keeping them under "the influence" while on their journey and thus receive them in the same condition as they started. They might then be sent in any stage of growth or flowering. Unless the after-effects are injurious to the plants, experiments in this line will, I think, eventually produce some results of practical use to the florist. Has anybody seen any account of experiments made with this object in view? If so, I would like to know of them. Can not some of our scientific and chemical florists give their opinion on this subject? SIB.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

AGAIN we have been obliged to lay over for another week quite a number of articles that were already in type. But all will appear shortly.

THAT new directory is coming. It has been subject to numerous irritating delays, but may now be looked for most any day.

The World's Fair.

The Bureau of Floriculture hopes to make such arrangements as will give to chrysanthemums, cyclamen, Chinese and other winter flowering primulas, cinerarias, calceolarias, amaryllis, Dutch bulbs, narcissus and other winter and spring flowering plants, a magnificent representation during their season of beauty from Nov. 1, 1892, to April 1, 1893.

The proposed plan is to have displays of the plants and bulbs mentioned above in such quantities as to form a great attraction during their best season of flowering.

In the case of cyclamen, cinerarias, primulas, calceolarias and mignonette, all the seed from different firms contributing will be sown on the same day; the same treatment will be given to all; the same soil will be used; and at the final potting an equal number of plants from each contributor will be selected and grown together. When in flower it is expected that awards will be made in the order of merit, and all contributors will have the privilege of attached their business cards and addresses, subject to the rules of the department governing the same. A record of all contributions will be kept and credited to the party supplying the seeds, etc.; all will be treated in the most confidential manner, and such methods will be pursued as will insure perfect justice to all.

All seed must be supplied free of cost to the department; thoroughly capable men will have charge of the growing of the various plants so that the highest state of cultivation may be developed, and the growing and cultivation of the plants will be carried on without expense to the contributor. Seeds in sufficient number should be sent to make it certain that not less that 100 plants of each will be in good condition at the time of final potting.

Cyclamen seed must be sent immediately upon receipt of this communication, as it is now late in the season; the sowing of cyclamen will be made not later than Feb. 4, 1892. They may be represented in 10 kinds.

Chinese primulas may be shown in 12 kinds, and must be sown not later than March 1; cinerarias and calceolarias in mixture, 200 plants, to be sown by March 1; mignonette will also be sown by March 1.

It is hoped that this offer will be thoroughly appreciated by those to whom we make it. JOHN THORPE,

Chief, Bureau of Floriculture.

An International Chrysanthemum Show.

A fact that has been bothering Chief Thorpe of the Floricultural Department of the World's Fair for some time is that the Fair will close too early in 1893 to permit the chrysanthemum to show itself in all its gorgeous variety, and with the present popularity of this flower all will admit that the Department of Floriculture would be far from complete without such a display. But what we will not have time for the fall of 1893 we will have time for the fall of 1892 thought Mr. Thorpe. So he consulted the Director General, who when the state of affairs was explained thought that suitable arrangements could be made. The horticultural building will be completed by that time and in fact many plants and exhibits installed, but there will be acres of space to use for such an exhibition as contemplated.

In order to get an expression of opinion on the plan from as many in the trade as possible, and to have formulated some general plan to present to the Exposition managers, Mr. Thorpe called together as many as he could reach on short notice last Monday afternoon, there being present in the city at the time Mr. M. A. Hunt, of Terre Haute, Ind., Treasurer of the S. A. F., and Messrs. W. G. Bertermann and C. J. Truemper, of Indianapolis. In addition to Mr. Thorpe and the gentlemen named there were present at the meeting Messrs. J. T. Anthony, J. A. Pettigrew, J. C. Vaughan, A. McAdams, George Gardner, F. F. Benthey, F. Kennicott, M. F. Gallagher, P. J. Hauswirth, Edgar Sanders, H. H. Hindshaw, W. C. Egan and G. L. Grant.

After Mr. Thorpe had stated the objects of the meeting Mr. Hunt was elected chairman and Mr. Grant secretary and a general discussion of the project ensued which was participated in by most of those present. A committee was finally appointed to formulate a plan and submit same to the full meeting for action. The committee submitted the following, which after slight discussion was adopted by a unanimous vote:

WHEREAS, the World's Columbian Exposition closes October 30, 1893, too early for the annual chrysanthemum shows of that year, and

WHEREAS, these annual shows have become the greatest and most popular medium of expression of public interest in horticulture,

THEREFORE, we recommend that the Department of Horticulture arrange for an International Chrysanthemum show in the Horticultural Building, to be held under the auspices of the American Chrysanthemum Society, opening November 3, 1892, and continuing 15 days.

Suitable medals and premiums should be provided, which in the judgment of your committee could be fairly done at an expense not to exceed $12,000.

It is believed that the attractions of an advance view of the World's Fair Buildings in addition to such a superb exhibition as this will certainly be will draw immense crowds and that the exhibition will be very profitable to the Exposition Company.

The exhibition will be thoroughly International in character and that foreign exhibitors may be properly represented the Department will undertake to grow into exhibition condition plants sent from

over the water early in the spring. In this way all the large chrysanthemum growers of the world can be represented. It is expected that this exhibition will bring together a display of chrysanthemums in such variety and quantity as the world has never seen.

Thoroughly competent committees will pass upon all seedlings displayed no matter upon which day received and it is thought that during the 15 days of the exhibition opportunity will be given for nearly all the seedlings to be shown at their best. Medals obtained in such a contest will mean a great deal and will at once stamp the winners as possessed of great merit.

Certainly no man is more competent than Mr. Thorpe to direct such an exhibition and none is better able to make it thoroughly international in character. May the minor details all be satisfactorily arranged and preparations be at once begun for an exhibition which if carried out will be a revelation to the world of the wonderful variety in color and form of the Queen of Autumn.

The White House Greenhouses.

When in Washington the other day I visited these gardens with a good deal of pleasure. The main conservatory was pack-full of a large assortment of flowering and foliage decorative plants and everything had a general air of good health, thrift and cleanliness. The lesser greenhouses are used as feeders for the large conservatory, or for the special cultivation of roses, carnations and other flowers. Most all seasonable flowers, as Chinese primroses, cinerarias, begonias, bouvardias, heliotrope and the like, are grown in quantity, and cold frames are filled with pansies, bulbous and other stock. Indeed in one frame I noticed a fine batch of Christmas roses (Helleborus), which must have contributed considerable assistance this winter in the way of cut flowers.

The following are some of the plants I particularly noted:

THE ORCHIDS looked fine. There were some splendid specimens of Dendrobium nobile in bloom, also nice plants of D. Dearii and D. Wardianum. There were many cattleyas, a few lælias, some cypripediums and phalænopsis, handsome specimens of Galeandra Devoniana and Bletia Shepherdii in fine bloom, also Cœlogyne cristata. The electric lights in the conservatory were said to have an injurious effect upon the suspended dendrobiums.

BIGNONIA VENUSTA.—A Brazilian vine with crimson flowers; free growing and a very generous winter bloomer. In fact it is one of the most desirable of all greenhouse climbers.

PASSIFLORA RACEMOSA.—Another handsome free blooming vine from Brazil. It has red flowers in drooping racemes. One of the oldest and best of the greenhouse passion flowers.

PLUMBAGO CAPENSIS.—Both the blue and white flowered forms were trained against a wall in a small greenhouse, and in bloom. Pretty at all times, but I have not found their cut blossoms of good lasting nature. For outdoor summer gardening both forms are capital plants and bloom abundantly. Indeed it is one of the plants that is not made as much use of as it should be. Speaking of plumbagos I might here say that a year or two ago I noticed President Dean had a lot of the East Indian P. rosea, but he tells me he couldn't do anything with it commercially. This is a pity, for both it and the Ceylonese white one are capital winter blooming plants for conservatory decoration.

POTHOS (Scindapsus) argyræa and one of the large leaved maregravias were growing up against a damp wall in a warm house. Both are shade, damp and heat loving vines whose stems and leaves cling as close to the surface against which they grow as "the bark to a tree." Their horticultural value consists in their evergreen nature and close clinging habit and not to any flowering propensity or leaf beauty.

WHITE POINSETTIAS.—It is not often we meet with this variety nowadays, for it doesn't seem to hold favor. At the White House, however, lots of it are grown. Except in color—creamy white—it is similar to the scarlet poinsettia, and where variety is wanted no doubt it is a desirable addition to our winter flowers.

STRELITZIA REGINÆ was in bloom. What a fine old plant this is for a large greenhouse. It is ornamental as a foliage plant and very striking when in bloom. While it can be had in bloom most any time its regular blooming season is in the winter time. About four of its brilliant orange or blue-purple flowers occur on each scape. It is not a plant that would pay the cut flower florist, but all general plant merchants should carry it.

ECHEVERIAS (the proper botanical name is Cotyledon, but as echeveria—itself a botanical name—has become generally accepted as the English name for this genus, we had better stick to it in like manner as we do to geranium, fuchsia and verbena).—Several of them, as retusa, metallica and the like, make nice winter blooming plants and as such are a great deal used here and elsewhere in Washington. Indeed I saw a made up mantel piece in a cool house and the flowers it contained were scarlet poinsettia, white camellias, Roman hyacinths and echeveria set in smilax.

STROBILANTHUS (GOLDFUSSIA) ISOPHYLLUS.—This is a very common old fashioned plant and one that is really useful for adding variety to the greenhouse in winter. It is a little, bushy, soft habited plant, easy to grow and neat and full of funnel shaped, lavender-blue blossoms. For cut flowers it has no value, as its flowers have not character enough or taking color; besides, they drop too quick.

ERANTHEMUM PULCHELLUM is another old favorite winter blooming plant with deep blue flowers. Stocky, easy to grow, abundant and long blooming, but only of use for greenhouse decoration.

LIBONIA PENRHOSIENSIS occurred in quantity, but I omitted to notice L. floribunda and Jacobinia (Sericographis) Ghiesbreghtiana, both in the same line and exceedingly desirable for winter decoration. As regards the cultivation of these plants let me particularly recommend that they be kept well headed back during their earlier life, planted out in summer and lifted and potted early in fall.

DWARF CANNAS.—I noticed a few in bloom in one of the smaller houses, but nowhere caught a glimpse of the golden frilled Madame Crozy or the vivid Star of '91.

THE LACE-LEAF PLANT of Madagascar, botanically known as Aponogeton (Ouvirandra) fenestralis, is a little water plant and found a home in a small tank in a warm greenhouse. This plant is a curiosity. It has a tuft of oblong leaves about 9 inches long and 1½ inches wide and which float just under the surface of the water. Like lattice work the leaves are a complete net work of holes, but the holes are squares not diamond shaped, in fact they are simply a skeleton of nerves. In Madagascar it grows in considerable quantity by the margins of running streams, in shallow water, and as it has tuberculate, edible, farinaceous roots it is gathered by the natives as an article of food. They call it ouvirandrana, which means water yam. In our greenhouses, however, it is not only a curious, but somewhat rare plant and a rather difficult one to grow well. Its little white flowers are pretty enough in their way, but the skeleton leaves are the plant's only attraction in a horticultural way.

WM. FALCONER.

Cyclamens.

Some time since we received from Mr. John Rose, gardener for Mr. F. T. McFadden, Cincinnati, a magnificent specimen plant of Cyclamen persicum giganteum, which we noted in the subsequent issue of the FLORIST. Knowing that the trade would be much interested in the subject we at once wrote to Mr. Rose asking him to favor the readers of the FLORIST with a description of his method of culture to produce such splendid results and also requesting him to have taken for us photographs of single plants from the same lot and of a group also. Mr. Rose very kindly responded to all of our requests and we present in this issue reproductions of the photographs and give Mr. Rose's article below.

The small plant illustrated was in a 5-inch pot and was from seed sown March 15 last. This shows what can be done with the cyclamen when properly handled.

The cyclamen, as a rule, has not been well done in this country except by a few growers in Boston and New York, yet it has been pushing itself into prominence for the last two or three winters and I believe it has come to stay, as there is not a better winter flowering plant in cultivation to-day. The cyclamen will bloom and thrive in the window of any moderately warm house for 6 months, which is more than we can claim for any other winter flowering plant.

Cyclamens are of easy culture and should be grown and handled by all growers of winter blooming plants. Seed should be sown in a mixture of one part light loam, one part leaf mould and one part sand, in shallow boxes and kept well watered until the seed germinates. There is no use sowing the seed before January, as it only takes from nine to twelve months to have plants ready for the market. Most growers sow their seed from August to November and keep them lying around their houses all winter getting hard and spoiled.

One of the greatest points in the culture of cyclamens is to keep the small plants growing right along from the time the seed germinates and in order to do this the seedlings, as soon as large enough to handle, should be pricked out of the seed pans into others, giving them a nice light loam with enough sand in it to keep it open. Then as soon as they form a nice little bulb with about two leaves pot into thumbs, always giving a nice light compost of loam and sand. As soon as they are rooted through in the thumbs shift them into 3-inch pots and by that time it will be about the middle of May, when they should be put out in frames shaded from the sun and aired freely night and day. They should be shifted along as necessary, never allowing them to get pot bound until you get them in as large a pot as you want to winter them in. I

SPECIMEN CYCLAMEN PERSICUM GIGANTEUM.

have grown plants from seed sown in March into 8-inch pots before September.

They should be left in the frames until the 1st of October, when they should be housed. Then begin to feed liberally with manure water and continue all winter.

The specimen sent you was one plant of 500 kept over from last year and seed sown March 2, 1890. They were partially dried off all summer and in July shaken out and repotted in large pots and grown out in frames until first of October. JOHN ROSE.

The Violet Disease.

I have read Mr. Ch. D. Wadsworth's statement corcerning the violet and its trouble. I would say, if a parasite or an insect is the cause of violets losing their leaves, is not that really a disease?

I saw a number of plants in the fall of last year, just after they were taken in the house (and as good a place for violets to grow as could be made for them) and the disease was then doing its worst. I saw the same plants again only last week and I should suppose they had been completely stripped. The crowns were however throwing up an entirely new crop of leaves and on some of the plants there were a few imperfect blossoms, but quite a number of buds or flowers were forming and would apparently give the grower some benefit later on, though they would be probably of inferior quality. I took home in the fall a few leaves in my pocket for a close inspection and to me there appeared to be a minute insect at work between the outer and inner cuticles of the leaf, but not having a microscope I was not able to satisfy myself upon that point.

Years ago I saw much the same influence at work among celery plants. I planted five rows, two of plants I had raised from seed myself, and three from plants given me by my neighbor. The disease attacked the three rows and utterly destroyed them, while the two rows remained free from all sign of any hurt notwithstanding they were growing beside the others. I never saw the disease before nor since unless this is the same thing in the violets.

As regards the culture of the violet. In the spring the young and fairly hardened runners should be taken, and I think put into 2-inch pots, separately, then thoroughly watered and set where they can have a cool bottom, and but a moderate heat at top. I set mine under the bench in carnation house, along the front three deep on a damp board, and am very careful they never get thoroughly dry or receive more water than will keep the soil moist. Those who can spare the ground should in early May plant in the open, about fifteen inches between the row, and a foot apart in it. Take away all runners as fast as they appear, but don't do as I fear some are apt to do, mistake the

outer crowns forming around the central one for runners and injure the plants and destroy the crop. Above all else be sure to keep them clean during their growth. In September remove them, with a ball of earth if possible, to your frame or house, giving again an abundance of water and all the air you possibly can until the cold sets in, in earnest, then keep them at from 45° to 50° and if soil is favorable there will be a satisfactory crop. Those I had to do with last year and served in this way are today an exceedingly fine lot of flower bearing plants. But no runners are allowed a place yet; they are carefully taken away as fast as they appear. A large crop of bloom has already been taken from them and so far as I now see there is no sign of a failure yet.

Where the plants are to be grown, the manure (good and rotten) should be applied in the fall, and ploughed well under, then ploughed again before planting in the spring (especially if land is heavy) and if it is possible to get a few loads of old broken brick and plaster from walls or ceiling to spread with manure, you would find it a profitable investment. Any kind of calcareous matter, lime or chalk, is good for violets, for in the old country where the perfumed sorts grow wild the most and best are found on the chalk ranges or hills around the fields in hedges or copse, or in the banks by the side of the roads.

Light porous soil should never be used and if nothing but sandy soil can be obtained then just the top spit or sod should be used. Break it well up but not very fine, plant firmly and give water on bright days freely to the roots, sparingly always to the tops.

I think with Mr. Wadsworth improper treatment is most often the cause of trouble in plant culture, but if that is so with his violets this year, does he not know it? I think he has something more to say on the subject.

If violets are grown in a house I would prefer solid benches.

Cohoes, N. Y. ALFRED HUMPHREYS.

I note recently many comments in your paper on the violet disease. I think if parties will take healthy cuttings, spring or fall makes no difference, grow on *carefully* during summer, so that they may not suffer by drought, plant in frames early (not later than Sept. 1), and *carefully* keeping sash with air on nights, with but a pinch of air when weather changes many degrees from temperature of the day, they will be free from the pest. I have found the trouble to spread most rapidly in weather with extreme and sudden changes in temperature such as occurs in early autumn weather. This seems to be conducive to the growth of fungus which attacks chrysanthemums as well as violets.

I notice that if violets can be safely carried to December in a healthy condition there is seldom trouble. S.

American Chrysanthemum Society.

REGISTRATION.

As Messrs. Pitcher & Manda were the first to register the name of "W. A. Manda" for a yellow hairy chrysanthemum, it takes precedence over one named "P. Barry" which is said to be one and the same variety. The name first mentioned was received and registered some time before the last named was received.

EDWIN LONSDALE, Sec'y A. C. S.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

American Carnation Society.

This society now has over 90 members. The first annual meeting will be held at Buffalo, N. Y., Feb. 16, and in connection with it there will be an exhibition of flowers of both new and old varieties.

The following is a partial program of the papers to be presented and discussed:

"Carnation Rust; a new and destructive disease," by Prof. Arthur, of Purdue University.

"Carnations as Grown in Europe," Mr. E. G. Hill, Richmond, Ind.

"The Retail Trade," Mr. Wm. Scott, Buffalo, N. Y.

"Do Varieties Run Out?" Mr. W. R. Shelmire, Avondale, Pa.

"Carnations in Southern California," Mr. C. J. Haettel, Redondo Beach, California.

"John Thorpe's Ideal Flower," Prof. L. H. Bailey, Cornell Experiment Station.

All persons interested are invited to attend the sessions of the meeting and participate in the discussions. Flowers for exhibition should be forwarded, prepaid, to Mr. Wm. Scott, 479 Main street, Buffalo, N. Y., to arrive the day preceding the meeting. No charge will be made for entries and no prizes awarded, but a committee will examine and report upon the display. In case of new varieties sent for exhibition it is requested that a description of the habit and the pedigree be given.

The meeting and exhibition will be held at the Tifft House, where arrangements have been made for the accommodation of those attending the meeting. All those expecting to be in attendance are requested to notify the Secretary of the society as soon as possible.

The officers of the society are: Edwin Lonsdale, Pres.; Wm. Swayne, Vice-Pres.; C. W. Ward, Treas.; C. J. Pennock, Sec'y. The address of the Secretary is Kennett Square, Pa. The annual dues are $2.

Every grower of carnations should have a lively interest in the welfare of this vigorous young organization, and support it by placing his name on the membership roll whether he can or cannot be present at the convention.

American Carnation Society.

REGISTRATION.

Messrs. E. G. Hill & Co., register the following: Edna Craig, soft bright pink, the flower of good form, on long stiff stems and with fine caylx; Sea Gull, very large white, on long stiff stems, petals broad and of great substance; Attraction, beautiful shade of red, between a pink and a scarlet; White Dove, pure white, fringed, long stems; Ben Hur, soft Wilder pink, large and long stemmed with extra good calyx; Mrs. Robert Hitt, a softer shade than Wave, probably the longest stem in the carnation family; Indiana, flower extra size, creamy white penciled and flaked with bright pink; Salmon Queen, soft salmon lightly dotted pink.

Edwin Lonsdale registers his Grace Battles, a delicate pink, early and free bloomer.

Mr. C. E. Brinton registers the following: Excelsior, white, on long stems, quite fragrant; Delaware, variegated white and scarlet; Diamond, white with pink tinge; Lady Martha, penciled scarlet and white, large size; Oddity, pink ground shaded scarlet. A. M. HERR.

Carnation Germania.

ED. AM. FLORIST: I notice in your valuable paper much space devoted to the carnation and am convinced this is as favorite a flower on your side of the ocean as on ours. It is therefore surprising to me that the splendid border Carnation "Germania" is not better known with you. Why is this? We had the good fortune to originate this gem some 5 or 6 years since and it is now in everybody's hands. In England it is a universal prize winner as the finest yellow self color. A large bold flower, citron yellow (lemon, as you say) on long stems, an abundant bloomer, each plant giving 8 or 9 strong layers, robust habit, good foliage; these are the characteristics of this splendid variety with which we were so well pleased when we found it among our seedlings that we baptised it "Germania". Now I would like to see this plant introduced into the states and you ought to take an interest in this matter. Although I know that in the States you pay more attention to the Perpetuals, this "Germania" is of such value to every florist that it should be largely grown. FR. BENARY.

Erfurt, Dec. 27, '91.

Carnation Novelties.

It has come to be an unquestioned fact that novelties are a necessity in the carnation family just as babies are a necessity in the human family; to take the place with new blood and new vigor of the older generation who are gradually dropping off and out year after year.

The originator becomes as it were both father and mother to this young generation of carnations. He has all the pains, anxieties and love of the mother with the pride of the father in the carnations he produces, and it is not surprising that he sees all of the good and none of the bad points in the results of his labors; in fact it would be almost unnatural if he did not. Every mother thinks her own baby "a thing of beauty and a joy forever." Every originator thinks the same of his carnations, perhaps not quite so elegantly but he thinks it nevertheless. We all honor this maternal instinct be it in the home of luxury, the cottage or in the greenhouse. Do we all agree as to the "thing of beauty and a joy forever?" I can recall some babies that would not hold out as a joy for 24 hours in a stretch let alone forever; we all can recall some carnations that are in about the same predicament.

It may go hard with all this paternal and maternal instinct to throw out the product of our brain and brawn, but there is the consolation that we are assisting in that great law of the universe, "the selection of the fittest," and when we do succeed in getting projeny that is a thing of beauty the brilliance of our reputation is not sullied by the weak and unprofitable varieties scattered around the country accusing us of their parentage.

These are a few thoughts that occurred to me while on a visit to that genial and enthusiastic carnation man, Mr. Edwin Lonsdale. He, more than any other man I ever met, has experimented in the production of new carnations. The results can be seen at his place in all colors, all sizes and all manner of variations. He

CYCLAMEN IN 5-INCH POT. TEN MONTHS FROM SEED.

does not hasten his products on the market, but hesitates and carefully watches all their bad points to see if there can be any possible fault found with them. It is not, is it about as good as some of the older ones, but is it *better*, and not only is it better, but is it a *great deal* better? If not he says in that inimitable way of his, "I hardly think it would be a good thing to send out."

There is a little lesson in that last sentence we can all take to heart. It may be a long wait until we get one that comes up to the standard in every respect, but when we do the results will repay all our labor and patience. There have been so many varieties put on the market that are of doubtful merit that a novelty has come to be regarded almost with suspicion and is bought generally by the dozen or half dozen instead of by the hundred and thousand, as a good variety should be. The sooner we can get away from this state of affairs the better it will be for all parties concerned. It is only by the thorough trial of all giving promise and the careful weeding out of all second rate sorts that it can be accomplished. Business principles demand it; our reputation demands it; and the general public, who are getting better educated as to the requirements of a first class carnation, will demand it more and more every year.

A. M. HERR.

Useful Tree Ferns.

Several species among ferns of arborescent habit possess enough endurance to permit their occasional use for house decoration, and the combination of massiveness and elegance displayed respectively by the trunks and fronds is to be found in no other class of plants in the same degree.

Of course it is admitted that tree ferns occupy a great deal of space, and also can not be packed away in the greenhouses so closely as some other decorative stuff may be, but the fact remains that they have been used with charming effect for such purpose, and also that the majority may be grown nicely with but ordinary attention.

At the head of the list of useful tree ferns is Dicksonia antarctica, perhaps the easiest to manage and decidedly the hardiest of such ferns.

This species is so well known that it seems almost unnecessary to offer a description of it, except that the trunk is quite stout and ultimately attains a height of about thirty feet. A more useful size for our purpose, however, are nice straight stems from two to six feet in height and crowned with a good head of fronds. Such stems as these are frequently imported in the same manner as cycas stems, that is, with the roots and fronds cut off, and usually require two seasons' growth in order to make shapely plants. About the same temperature and atmosphere that is suitable for camellias is adapted to the needs of Dicksonia antarctica, too high a temperature invariably resulting in an attack of thrips and other vermin, and by which the foliage is speedily ruined.

Another handsome species of this genus is D. squarrosa, and though more rare than the preceding has also been in cultivation for many years.

D. squarrosa has a comparatively slender stem, from the top of which are produced a number of rather stiff fronds of dark green color, and as the fronds usually stand out at right angles from the stem it gives the plant a very distinct appearance. This species also thrives in a cool house, and in common with the preceding enjoys an occasional syringing overhead during hot, dry weather.

Dicksonia Schiedei is a larger grower than either of those mentioned above, but where space will permit should certainly be included, its long drooping fronds being singularly attractive.

The fronds of this species attain a length of fifteen feet or more, being light green on the upper side and more or less glaucous beneath, but such dimensions as these are not reached in a year or two, and therefore, need not alarm the would-be grower. D. Schiedei may also be grown under cool treatment, but makes more progress in a house kept at about 55 degrees.

The alsophilas also include some very handsome species that may be made useful for an occasional decoration, though the fronds of this genus are not as hard as those of the dicksonias, and consequently are more likely to suffer from such use, especially when the foliage is young.

Two species most easily obtainable are A. australis and A. excelsa, both of which are rapid growers and easy to manage, their fronds being large and bipinnate, those of A. australis being lighter colored than A. excelsa, and also having less of the chaffy scales on the stems.

It is essential to the welfare of any of the alsophilas that they should be given an abundance of water at all times, as drought will soon disfigure the fronds.

Cyathea dealbata is another remarkably handsome tree fern that may be grown in a cool house and produces long fronds of similar form to those of some of the dicksonias, their color being dark green on the upper surface, but almost white beneath, the contrast between the two sides being quite striking.

This fern can not be too highly recommended, and the fronds possess such substance that they will stand considerable exposure.

Another notable member of this genus is C. medullaris, a rapid growing species with large bright green fronds, the stipes of which are black, as are also the stems of the plants.

The cyatheas also enjoy copious watering, and syringing is at times beneficial, but as with all ferns watering overhead should not be resorted to except during bright and dry weather.

In the matter of soil the few examples cited are not specially fastidious, the essentials being an open compost composed of rough peat and fibrous loam, to which may be added a liberal allowance of coarse sand, and the plants should be firmly potted.

The application of fertilizers is not necessary until the plants are quite pot-bound, when an occasional watering with liquid manure will be beneficial, but it is best not to apply the latter when the plants are very dry, else more harm than good may result.

W. H. TAPLIN.

Rose Disease

Can any of your readers inform me what is the cause of the edge of some of the leaves of my Bride and Perle roses turning yellow, as though they had an overdose of tobacco smoke, although I do not fumigate them at all? Would worms in the soil be likely to affect them in such a manner? Also what is a good remedy to kill the worms? I use lime water with some success, is there anything better?

W.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser in these columns.

Philadelphia.

One of the growers said recently that it seemed to him that the more a man knew about growing roses, the poorer success he had with them, while a novice would go into the business and for a year or two have remarkable success, until he began to know all about it, and then his failures would begin.

The weather has been decidedly wintry the past week, plenty of snow and fifteen to twenty degrees of frost.

Flowers as a rule have been scarce, but as the demand has been light, it is all the better, for with a full supply the market would have broken badly; as it was the prices held up pretty well. Carnations, while in good supply, still command a high price; nothing worth having is sold for less than 2 while the best command $2\frac{1}{2}$ to 3.

Mermets and other roses in their class are bringing 8 to 10; Perles, Sunsets, etc., 5 to 6; no Beauties of any account; Brunners, Laings and Magnas sell from 40 to 60, with hardly enough to supply the demand.

John Burton will commence to cut from a new house of hybrids next week which we are told will be very fine.

New valley is now coming in from all directions, with Ball of Holmesburg away in the lead. Mr. Ball grows valley as well as he does palms, and from our earliest recollection has had the best in this market; it brings from 3 to 5.

The first double daffodils are here but not up to the mark. This flower sells very well later on.

The basket for carrying cut flowers is fast giving way to the box or boxes. Nearly all the growers about here are now delivering their flowers in this way. Shallow boxes fitting into one another and girded with a large strap with which to carry them is a perfect arrangement; the stock is seen at a glance and there is no occasion to handle any except the flowers desired.

Mr. C. H. Grigg has sent out a prospectus of an enterprise under the title of "Phila. plant auction and commission house and wholesale Florists' Exchange." It is intended to hold public sales of plants at stated intervals, to receive all kinds of florist's stock on consignment for private sale and act as agents for growers and others in this market. A department will be devoted to the use of wholesale flower dealers and growers; stalls and booths will be fitted up, provided with necessary furniture and electric light. Space can also be secured for storage in refrigerators. These stalls are to be rented to subscribers only. It is proposed to secure a warehouse in the business centre of the city. The object is to make a headquarters for the wholesale trade in this city. "The cordial co-operation of the trade is earnestly solicited to go toward making this the beginning of a new era in the development of the florist's business in Phila." is the concluding sentence in the prospectus.

"Cordial co-operation" is good when you get it in sufficient quantity. It may be that there is enough lying around to start with. We fully believe that if such an exchange is started and gets any support from the growers it can not help but be a success, at least the department devoted to wholesale flower dealers and growers. There are only three wholesale commission houses in Phila., most of the growers in this neighborhood handling their stuff themselves. If an exchange, worthy the name, is established it will certainly improve the shipping trade as well as greatly benefit the local florist.

As to the auction feature, we have our doubts as to its success, but if the florists are to have a voice in the management of the proposed exchange, which they certainly should, it would doubtless be conducted so as to benefit the whole trade.

Charles Fox is still confined to his house and improving slowly.

Robt. Craig is now able to sit up and is improving though it will be some time before he will be about.

New York.

The cut flower trade has settled down into its regular winter gait. There are balls and parties of all descriptions every day and all the florists who cater for that sort of trade are getting their usual share. The biggest thing of the kind for the season, probably, was the New Year's ball at Madison Square Garden on Jan. 18th. This was not in the garden proper but in the beautiful ball and assembly rooms in another part of the great building. The rooms and the entrances and halls were lavishly decorated with green and flowers, a large force of men having been employed three days in the work. The floral decorations were by the Klunder Co. Three carloads of green were used on the walls, the principal green used being laurel, rhododendron and hemlock. The ball room was heavily festooned with pink roses. On the walls were fifty placques of roses, daffodils, etc., and large quantities of Harrisii lilies and cattleyas were used in corners and other available locations.

The daffodils in market at present are of the variety known as "Incomparable" principally. Their only claim to the name is their early forcing qualities. They are not at all popular with buyers and wholesalers find it a hard task to get rid of them even at low prices. The Von Sion is the "incomparable" narcissus for this market. Jonquils are also difficult to dispose of, and are usually worked into designs or baskets where their bright color gives an opportunity to work them off. There is a tendency to overstock the market on bulbous flowers and there is a regular supply now of about all it will stand. Lily of the valley is improved in quality. Harrisii lilies are rather too plenty. Tulips show but little variety yet, and are still of inferior quality. Aside from the bulbous stuff there is a demand for all the flowers coming in at prices which are fair and which are holding quite steady. Carnations and roses of all kinds are disposed of as fast as cut, and violets still maintain their lead in quality and price over any other eastern market. Grace Wilder carnations are abundant everywhere, even the street stands being well supplied with them, but they all go, there seemingly being no limit to the demand for this popular variety.

W. R. Davison is bringing in some of the finest violets in the market. A sample of them was seen on the table at the Florist Club dinner.

John W. Gibson, of Newport, is at present with the Klunder Co., giving them a lift through the busy season. Newport flower trade is not particularly brisk in midwinter.

H. A. Daacke has offered the use of the basement of his new seed store on 14th St. to the Jerseymen for a cut flower market, where they could meet as do the Long Islanders at 34th St. Ferry.

Mrs. Katharine Dailledouze, mother of the Dailledouze Bros., of Flatbush, died suddenly on Jan. 20th.

Louis Siebrecht, of Floral Park, buried his wife on Jan. 19th.

Chicago.

J. W. Elliott of Pittsburg was in the city last week. Part of his mission was to arrange with Chief Thorpe for space for displaying 10,000 plants of Griffin's tuberous begonias at the World's Fair.

Among other recent visitors to the city were Treasurer Hunt of the S. A. F., E. G. Hill of Richmond, Ind., W. G. Bertermann and C. J. Truemper of Indianapolis and W. W. Coles, Kokomo, Ind. Mr. Hunt seems to have acquired a new badge of office while at Washington. The shine of his silk hat and the depth of the cape on his stunning new coat give quite a tone to any gathering of florists at which he is present.

Owing to the unfavorable weather work is progressing slowly on the new conservatory at Lincoln Park and some doubt is felt as to whether it will be ready in time for the proposed spring show. And now that we shall have so much work to do in preparing for the great International Chrysanthemum Exhibition next fall the society may decide to abandon the project of a spring show this year.

It has been alleged in the daily press that an attempt is being made by interested parties to oust Gen. Joseph Stockton from the Lincoln Park Board and put in a more manageable man. Gen. Stockton has been a member of the board ever since it was organized—18 years ago—and has been its most active and faithful member. His retirement would unquestionably be a serious blow to the best interests of the park, and the florists of the state should bring to bear any influence they possess to prevent the threatened action. The appointment is made by the governor.

There is no material change in the aspect of the market from last week. Stock is generally getting a little more plenty and prices on roses rule a trifle lower. The trade on the whole was rather quiet last week, the demand being light, but as the supply was also limited the effect on prices has not been very noticeable. The bright and pleasant weather of the past few days, however, will work a decided change.

Violets are already beginning to show the effects, the supply in the last few days being more than double the usual cut, and prices are beginning to weaken in consequence. First quality flowers still command from $1.50 to $1.75 per hundred, but fairly good flowers can be bought at $1 to $1.25.

Most of the tulips are still poor, but a few La Reine are very good. Although a white naturally these flowers as grown by Geo. Klehm would hardly be recognized as being this variety, as the color is a beautiful pink. The flowers find a ready sale at a good price.

A few Incomparable and Von Sion begin to appear, an addition to our flower list always welcome to the buyer.

Valley is very much improved and sells more readily.

Buffalo.

Club affairs with us have been very quiet since our last meeting in December, but a full attendance is expected this week to discuss the coming of the American Carnation Society, which will hold its 1st annual convention here on Tuesday, Feb. 16th. It was left to Mr. Scott to make arrangements for hotel, meeting room, etc., and, as will be seen by circulars issued to members, the Tifft House will be headquarters. Since the National Society was here three years ago this house has undergone a great

GROUP OF CYCLAMENS OF THE GIGANTEUM STRAIN.

change. It has changed hands, is entirely renovated, is beautifully furnished and the table is equal to anything in the country. The bar is—well never mind, I had forgotten carnationists need nothing of the kind. Two fine rooms are given to the convention, one for the display of flowers and one for the business meeting. We hope there will be a good attendance. Mr. Hill is coming all the way from Indiana and surely there is no excuse for those residing nearer to stop at home.

Mr. Long is back from Washington and seems to have considerable "Æsthetical responsibility" still hanging about him. He speaks of the Washington meeting as fine in every way, and the New York banquet, to use his own words, "simply elegant". Dan has brought home a strange yarn about his being in a Philadelphia bowling alley and making the second highest score in a game he played, something like 150 he says. There must be a terrible mistake somewhere. We suspect the good natured Philadelphians told their boy to put the pins in a bunch for Mr. Long.

We met the senior member of the firm of Adams & Nolan yesterday. He wore a broad smile and on enquiry found good business to be the cause. This is pleasant to hear, for generally business is considered very quiet.

Palmer & Son have a grand show of Harrisii lilies in their show windows.

James Buxton of Niagara St. has again escaped all disease with his violets. He has several bunches of Marie Louise and the flowers are fine and foliage perfect. He grows them in a temperature of 10 degrees higher than most growers advocate, but he gets there just the same.

Why don't all growers or shippers of violets use a small *rubber band* for tying a bunch of 50 or 100 of these sweet little flowers. The expense is nothing, they are put on in one quarter the time it takes to tie string or thread round the stems, and how convenient when a retailer wants to split a bunch and how much neater in every way. I hope growers will not need a second reminder on this point. G. S.

Providence.

The annual meeting of the Rhode Island Horticultural Society was held on the 20th inst., when the following officers were elected under the new by-laws which went into effect at the annual meeting: President, John G. Massie; first Vice President, Levi W. Russell; second Vice President, Thomas K. Parker; Secretary and Treasurer, Charles W. Smith; Librarian, Thomas K. Parker; Botanist, Prof. W. Whitman Bailey; with a Board of Trustees, Finance, Lecture, Auditing and Necrological Committees and a Committee of arrangements for all exhibitions.

Action was taken looking to an exhibit of the Horticultural resources of this state at the World's Fair. Also some action was taken recommending an exhibit of grapes at the World's Fair, classified in the order of their respective species or intermixture of species and subdivided into groups and families, as was done at our grape exhibition in October last and which attracted a great deal of attention.

The retiring president, Edward I. Nickerson, Esq., delivered his annual address, reviewing the work of the society for the year past and other matters of interest.

The society has held four exhibitions during the year, winding up with a grand chrysanthemum exhibit in November.

After two years of faithful service the retiring president declined a re-election, to the great regret of the members, as he had worked faithfully for the upbuilding of the interests of the society, and by his

urbane and gentlemanly conduct of affairs had won the esteem of all who had to do with him in the affairs of the society.

The new president is a well-known banker of this city, of push and energy and brings to the office a good knowledge of its duties and the needs of the society from being long familiar with its management in other offices.

The society will hold an exhibition of azaleas and other flowers in March, and will also hold exhibitions in June, September and November.

C. W. SMITH, Sec'y.

St. Louis.

The large amount of snow and protracted cold weather we have had during the past few weeks have made business somewhat quiet. Prices are therefore low and flowers plenty, except violets. Azaleas are selling well. It is said that a new wholesale house will start in business Feb. 1st.

A visit to Mr. D. J. Brown's place at Brownhurst, Kirkwood, Mo., found his three 100x20 ft. greenhouses filled with a very healthy and choice collection of orchids, palms, nepenthes, araucarias and other fine stove and greenhouse plants. Here can be found orchids in great variety. In one house is a magnificent display of Cattleya Trianæ in various shades of color, while a mammoth Cattleya Percivaliana, on which are over a hundred flower spikes, hangs suspended from the roof. Of cypripediums, oncidiums and angræcums there is a remarkable collection of rare specimens now in bloom. On one of many racemes of a large plant of Cymbidium Lowianum your correspondent counted sixteen buds.

Mr. Brown has 115 named species of palms. Among them is a specimen of Rhapis Kwamwouzick. This palm is more neat and compact in growth than R. flabelliformis and makes a very handsome decorative plant. Among the fifteen or more species of cycads found here is a noble plant of Encephalartos caffra standing at least six feet high. By its side is a specimen of E. horridus with its bluish green foliage and uninviting spines telling the most casual observer that it is indeed truly named.

One of the most handsome of the nepenthes in Mr. Brown's large collection is N. Courtii superba, for although the pitchers do not grow so large as those of many other nepenthes they are nicely shaped, beautifully colored and spotted.

Calathea Kerchoviana (Maranta leuconeura Kerchoviana) is an old favorite that shows itself to advantage in these greenhouses. J. W. D.

Toronto.

With the exception of spasmodic demands for white cut flowers trade still holds dull. The influenza is doing its work at a lively rate and many are the funerals that take place. It is an ill wind that blows no one any good and what little good there may be in the grip is going to the florists, doctors and undertakers, especially the doctors and undertakers. The writer hereof being afflicted with the complaint was enabled to save himself and his friends a deal of expense by partaking of a decoction made under the direction of the wash-lady; he would give the receipt here, only that the editor would probably say that it did not tend to the advancement of horticulture; let him take care that it does not escape his eagle eye some day and appear as a Coccus adonidum exterminator.

Seed catalogues are dropping in now and so far at least I have not heard that the customs department has laid violent hands on those from the States. The prettiest and most artistic cover I have seen yet is on The Steele Bros. Co.'s (Toronto) seed list.

Mr. J. H. Dunlop has arrived home safely from Washington, at least he has been heard through the telephone. When he gets even with his neglected business again the boys will expect him to give an account of the way he spent his time whilst away.

It is reported that the climate or something (probably something) at Washington has the curious effect of reducing the size of one's hat; it would be interesting to know if any of the other members of the committee had any experience of this strange phenomenon. We who are going there next August are anxious to pick up all the information possible beforehand, as we wish to carry ourselves with a senatorial air and don't want to be giving ourselves away on some little detail.

E.

Louisville, Ky.

On Jan. 20 at 11 p. m., during the coldest weather we have had so far, 4 degrees below zero, a fire broke out in one of Nanz & Neuner's greenhouses devoted to orange and lemon trees, etc. The trees were in full bloom and the flowers would have brought several hundred dollars, same selling at good prices here. They were all in tubs and 8 to 12 feet high, 20 to 30 years old. Having a night watchman on the place the damage did not exceed over $500. They insure all their stock and greenhouses in the Royal, Sun Mutual, American, Lancashire, Niagara, and Alliance Insurance Co.'s. The insurance money was paid within 24 hours after the fire. They recommend these Co.'s to brother florists.

Business in flowers rather light at present and plenty of good stock in market.

Christmas and New Year's trade was better than last year.

Mr. A. Lauer is very sick, for several weeks suffering from the Grippe.

SITUATIONS, WANTS, FOR SALE

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By a practical florist and gardener understanding nursery stock; first class references. Address X, care J. C. Vaughan, box 688, Chicago.

SITUATION WANTED—As headgardener by a first class man with 15 years' experience; private preferred; only first class position; good references. C J S, 311 Main St. room 9, Worcester, Mass.

SITUATION WANTED—Experienced gardener, married; private place preferred. Can furnish best of references. Address JOHN RUTHERFORD, care Peck & Sutherland, 67 Bromfield St., Boston, Mass.

SITUATION WANTED—As manager or foreman; thoroughly versed in growing roses, plants, propagating, bulbs, etc; also making up. Over 20 years' experience; references; good wages wanted. Address FLORIST, care American Florist.

SITUATION WANTED—By commercial florist as foreman; thoroughly competent in rose and cut flower growing and all commercial florist stuff, also experienced propagator; age 26, married, no family; best of references. M D, care American Florist.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

WE HAVE RECEIVED a copy of the annual report of the Horticultural Society of Japan. It is very neatly printed, in the Japanese language, and is no doubt full of interesting horticultural information. But we have not yet found time to read it—at least as fully as we would like to. An excellent lithograph, giving a bird's eye view of the World's Columbian Exposition grounds and buildings, makes a handsome frontispiece. And in examining the titles to the various buildings it is interesting to note that the Japanese can express in what appears to be only one or two letters what requires a whole alphabet in English.

NEW DAISY "SNOW CREST."—We have received from Mr. Henry A. Dreer, Philadelphia, a dozen blooms of this new double white daisy. The flowers are very double, none less than an inch in diameter, and pure white, on stems from six to eight inches in length. Mr. Dreer writes that well grown specimens will cover a silver dollar, and that the plant is an admirable one for the hardy garden or may be forced for cut flowers under the same treatment as violets. Certain it is that the double daisy as improved of late years is taking a place as a cut flower, especially with those who retail their own flowers.

THE SECOND annual dinner of the Baltimore Cactus Society was held at the residence of a member, in Baltimore, January 21. The menu was very elaborate, the dishes being represented on the card by humorous adaptations of the names of cacti and other plants. This society is composed of ladies and gentlemen whom the secretary facetiously designates as cacto-maniacs and is in a very flourishing condition. It probably is the only existing society devoted entirely to the interests of the cactus.

Catalogues Received.

W. Atlee Burpee & Co., Philadelphia, seeds; Dingee & Conard Co., West Grove, Pa., roses and other plants; Nanz & Neuner, Louisville, Ky., seeds, plants and bulbs; Haage & Schmidt, Erfurt, Germany, seeds; same, plants; H. G. Faust & Co., Philadelphia, seeds; Steele Bros. & Co., Toronto, Ont., seeds and bulbs; Price & Reed, Albany, N. Y., seeds; Michel Plant & Seed Co., St. Louis, Mo., plants and bulbs for florists; J. A. Simmers, Toronto, Ont., seeds; W. Piercy, Forest Hill, London, England, chrysanthemums; A. R. Ames, Madison, Wis., seeds and plants; Seven Oaks Nurseries, Union Springs, Ala., plants; John F. Rupp, Shiremanstown, Pa., seeds; Sherwood Hall Nurseries, Menlo Park, San Mateo Co., Cal., plants and trees.

Boston.

Roses of good quality are coming in all around now, but the demand is greater than the supply and sales are good. Gontiers are particularly fine. A few Bon Silenes are still on the market here and they sell well. Bulbous stuff goes rather slowly, especially tulips and paper white narcissus. Freesias are quite plenty. The wholesalers report the shipping trade as in lively condition.

Lawrence Cotter made a trip round among the New York growers last week and has returned satisfied that they have nothing there at present to excite either the envy or the surprise of a Boston man.

Joseph Tailby recently exhibited the new dwarf calla at Horticultural Hall and received a certificate of merit therefor.

Chas. Evans has recovered so as to be able to come into town, but shows the effects of his illness still.

L. H. Foster and David Allan are still the great violet men.

News Notes.

FLORAL PARK, N. Y.—One of Mr. Julius Scharff's little boys is quite sick of pneumonia.

OWATONNA, MINN.—The Owatonna Floral Association was organized Dec. 30, with a full staff of officers.

MINNEAPOLIS.—Mr. R. J. Mendenhall has returned from Chicago much benefitted by his treatment at the sanitarium there.

AVONDALE, PA.—Mrs. Chas. T. Starr has decided to continue the business of her late husband, for the present season at least.

UNION SPRINGS, ALA.—Our holiday trade was much better than ever before, the demand far exceeding the supply. The supply is still short owing to cloudy weather.

SPRINGFIELD, ILL.—Mr. A. C. Brown, of Brown & Canfield, has been quite ill and is still confined to the house. He was threatened with typhoid but escaped with catarrhal fever.

QUEENS, N. Y.—It is with deep regret we learn that Mrs. Louis Siebrecht died on Sunday, 17th inst. His large circle of friends deeply sympathize with Mr. Siebrecht and his family in their bereavement.

NORWICH, CONN.—Holiday trade was very good, ahead of last year. More demand for cut flowers than for baskets. This winter's demand for set pieces for funeral purposes is greater than at any time for the past dozen years.

NEW BRITAIN, CONN.—The program of the monthly meetings of the New Britain Horticultural Society for 1892 is as follows: March, Aloes, euphorbias and allied plants; April, Amaryllis and crinums; May, Exhibition of pansies and bulbs; June, Exhibition of roses; July, Lilies and geraniums; August, Exhibition of annuals and summer flowering bulbs; September, Coleuses and ornamental foliaged plants; October, Exhibition of dahlias and carnations; November, Exhibition of chrysanthemums; December, Winter blooming bulbs.

GERMANTOWN, PA.—At the meeting of the Germantown Horticultural Society on January 14 Prof. Thos. Meehan gave an interesting address on the various plants and flowers on exhibition, giving special attention to the rose and date palm, of whose origin and history he gave a most instructive account. The advisability of holding a chrysanthemum show next fall and the appointment of an advisory committee to co-operate with similar committees connected with the Horticultural Department of the World's Fair were discussed and final action deferred.

TOPEKA, KANS.—A meeting of the wholesale nurserymen of Kansas, Missouri, Iowa and Nebraska, belonging to what is known as the Western Association, was held here Jan. 6. The association is fighting the importation of California fruit, and wants the various states in this section of the country to pass strict inspection and quarantine laws, to prevent the importation of diseased fruits. The officers elected for the ensuing year were: President, H. T. Kelsey, St. Joseph; Vice President, R. H. Blair, Kansas City; Secretary and Treasurer, U. B. Pearsall, Ft. Scott.

SAN FRANCISCO.—The California State Floral Society held its annual meeting Jan. 8. The society now has 158 active members. A resolution was adopted indorsing the plans of John Thorpe, chief of the floricultural department of the World's Fair, and extending to him all possible assistance in local matters. The election of officers for the ensuing year resulted as follows: President, E. J. Wickson; Vice President, Mrs. L. O. Hodgkins; Secretary, Emory E. Smith; Accountant, Miss Carrie Rixford; Treasurer, Mrs. Helen Cross; Directors, Timothy Hopkins and Captain Kellner.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

MAIL TRADE in seeds is not opening well so far as reported notwithstanding early and general predictions of a favorable season.

THERE is said to be a surplus of Lima Beans in California amounting to 700 car loads and the production for next year will be much less than usual.

THE QUESTION is again raised, will the Canadian government insist on from three to five cents duty on American seed catalogues this year. It is reported they will.

RICHMOND, VA.—The fire reported in last issue was on the nurseries of W. T. Hood & Co., and not on the place occupied by T. W. Wood & Sons, the seedsmen.

MR. ALBERT DICKINSON is in Florida. He is very slowly recovering from an injury to his knee from a sprain received a year ago, and has not been on 'Change for that length of time.

THE SEEDSMEN'S LEAGUE (Anti A. B. Cleveland) held their winter meeting in New York on January 12. The attendance was light and social matters mainly claimed the attention of the members.

THE JOHN H. ALLAN SEED CO. has been incorporated to succeed John H. Allan at Picton. The new corporation will also conduct business in New York state. Mr. Allan is now 62 years old and wishes to wisely trim his sails.

Obituary.

JOHN A. SALZER the well-known seedsman of La Crosse, Wis., died after a lingering illness of Bright's disease, Jan. 22, 1892, in the 69th year of his age.

Mr. Salzer was born in Dettinger, Germany, and emigrated to America in his twenty-third year, settling at Galena, Ill. His fondness for fruits and flowers began in his childhood, when he served in his father's nurseries until his sailing for America. In 1866 he located in La Crosse, Wis., where he built the first greenhouse in that town, and laid the foundation of his present business, the John A. Salzer Seed Co., which was incorporated in 1886. Of this Mr. Salzer became President and the main share-holder, giving his full time to the growing department.

In every walk of life Mr. Salzer was pre-eminently an honest man. In his business relations there was never a compromise with conscience. There was sterling honesty, right, yes a little more than legal right to every one. He was a liberal, unostentatious benefactor, his gifts to the orphan asylums, the home of the aged, and other benevolencies of his church—the Methodist—though quietly given, reach thousands of dollars. Many a needy family in La Crosse, where his quiet, though ever ready and substantial assistance is known, will miss him.

He leaves three daughters and four sons, all grown, and an aged brother and sister, his wife having preceded him, having died in 1886.

It is understood that Mr. Salzer's death will make no change in the conduct of the seed corporation.

WHY You Should Grow Mushrooms.
Because they are the most profitable crop for the outlay that can be grown and may be grown without interfering with other crops. The market is sure, the supply never having been equal to demand.

WHEN You Should Grow Mushrooms.
During the Winter and Spring months, the first planting in August or September with successional planting until April.

WHERE You Should Grow Mushrooms.
Under the greenhouse benches, on the greenhouse benches among growing crops, in Rose Houses, in frames in the greenhouse, in cellars, stables or outhouses, in the open field or in mushroom houses.

How You Should Grow Mushrooms.

First get spawn that will grow. It must be fresh, well spawned, and in good condition. **Gardiner's Celebrated English Mushroom Spawn** is the best, and is always fresh and reliable. The details of culture are given concisely in our treatise, **"Mushrooms for the Million,"** Mailed free. **Falconer's "Mushrooms and How to Grow Them."** Published at $1.50. (Gardiner's price $1 35 post free.) **Robinson's "Mushroom Culture,"** 50 cts. post-paid.

GARDINER'S ENGLISH MUSHROOM SPAWN.
John Gardiner & Co., have made a specialty of choice spawn for years, and their celebrated English brand (made by the best maker in England, specially for their trade), has gained an enviable reputation among critical growers for its uniform good quality, and can be thoroughly relied on to produce a good crop of the best mushrooms. Orders booked now for delivery as wanted, $8.00 per 100 lbs. Special rates to large growers. Address all correspondence to **21 North Thirteenth Street,** Philadelphia, Pa.

JOHN GARDINER & CO.

Dwarf Budded Roses

The stock offered this season is of the same quality distributed by us last year and includes all the leading and popular varieties. Parties contemplating stocking up for spring sales will do well to place their orders at once, as plants are now dormant and can be shipped without any soil at reduced Express and Freight rates.

A FEW POINTS ABOUT OUR NEW DIRECTORY.

POINT 1.—The new book will contain an accurate list of those in the trade on the Continent of North America, January 1, 1892.

POINT 2.—In addition to the above it will contain the statistics of the Florist, Nursery and Seed Trades from the last census.

POINT 3.—It will also contain a complete list of all National and Local Trade Organizations, with just the information about each that you want to have convenient for reference.

POINT 4.—It will contain an alphabetical list of Roses, up to date, and whose accuracy as to spelling of names, class, date of introduction, etc., you can depend upon.

POINT 5.—It will contain a similar list of Chrysanthemums, also up to date. One that can be relied upon as authoritative.

POINT 6.—It will contain a similar list of Carnations.

PRICE ONLY $2.00.

Shading Greenhouses.

In response to J. S., page 392, would say better way is not to put any paint on your glass. Two years since I was in same position and determined to try something else. Procuring some of the light cotton goods, known to the trade as "Archery Bunting," I cut it in same length as sash bars *inside*, made a deep hem in each end, got some pine lath, slitted them in middle, making two pieces of each, inserted them in hems of shades, making a hole through shade and stick about one and a half inches from edge of cloth, tying in a loop of good strong twine. This for top or ridge end; for bottom one loop in middle is sufficient. To hang them, space off bottom edge of ridge, putting in screw hooks for the loops, letting each hook hold loops of two adjacent shades, which will give them an inch or so lap in their lengths. One hook in plate will hold bottom end. When fall comes and it is desirable to have more light it is easy to unhook and roll them up, storing away until needed.

This plan has so completely filled the bill with me I was prompted by editorial, page 488, to give my experience to the fraternity. I found but one inconvenience in this plan, that is when roses or vines are trained to rafters, but they can be loosened and suspended by loops to hooks which can be put through the shades into the wood.

This for wood houses; having the hint anyone having iron buildings will find means to apply the principle.

Fulton, N. Y. D. A. WATERMAN.

In regard to the article on shading on page 488, why can not the curtain be arranged on rollers, inside instead of outside, so as to overcome the difficulty caused by snow, wind and frost?

C. H. J.

[They are not infrequently so arranged, but do not seem to give satisfaction in most cases, except in houses devoted to tropical plants. The theory, as we understand it, is that while such a shading intercepts the light rays it does not prevent the heat rays from entering the house. And the shading needed by the average florist is one that will intercept the heat as well as the light rays. Indeed at most times it is more important to exclude the heat than the light rays, and after the heat rays have passed through the glass they are in to stay until expelled by ventilation and excessive ventilation while cold winds are blowing is we know undesirable. The best shading to intercept the heat rays of the sun is one that is placed over the glass and sufficiently above it to allow a current of air to pass between it and the glass. This seems to have been satisfactorily demonstrated and the main thing to now consider seems to be how to secure such a shading, that can be easily removed at any season at pleasure, be securely held in place and is at the same time not too costly. We hope there will be further discussion upon the matter.—ED.]

YOU CAN give the AMERICAN FLORIST your fullest support by confining your orders to those who advertise in its columns, and when ordering mentioning the fact that you were induced to order by the adv. in the FLORIST.

Foreign Notes.

Vienna held its first chrysanthemum show during the season just past.

An English grower finds that some daffodils do well in ground penetrated by tree roots.

According to an English correspondent Bletia hyacinthina is an economic orchid, a strong glue or cement being made from its bulbs by the Japanese.

A statue in memory of Benedict Roezl, the adventurous botanical traveler, has been erected at Prague.

A proposal has been made to remove the historically famous Jardin des Plants from Paris to Versailles.

The English National Chrysanthemum Society is considering the question of holding a chrysanthemum show in October this year.

The Midland Counties Pansy Society (England) gave a very satisfactory exhibition last year and has issued an extended schedule for an exhibition next June.

Chrysanthemum Viscountess Hambleden, which was certificated by the English National Chrysanthemum Society, was, says the *Gardening World*, raised by Mr. Robert Owen from an American variety, Miss Anna Hartshorn. It is a delicate silvery blush pink.

The latest English gardening society is "The National Amateur Gardeners' Association."

Mr. Ant. Roozen, the founder of the well known firm of Ant. Roozen & Sons, bulb growers, Haarlem, Holland, died Dec. 16.

The Marguerite carnations seem to have been generally disappointing on extended trial. But an English grower believes that it will be the forerunner of a new race of winter bloomers by crossing with the Perpetual kinds.

An English rosarian thinks that Ma Capucine and Mme. Chedane Guinoisseau are the loveliest of roses for the buttonhole. He says they "seem to have been raised expressly for the purpose," and that "most rose buds are too fat for buttonholes."

So many chrysanthemums of American origin are doing well in the hands of English growers that they are beginning to look with increased interest for the advent of American seedlings.

A correspondent of the English *Journal of Horticulture* describes the plan adopted at the largest American exhibitions of displaying chrysanthemums and other cut flowers on long stems in vases and urges that the same plan be adopted at English shows, excepting for certain classes of chrysanthemums.

EXTRA SEEDS FOR FLORISTS.

PRINT YOUR SPRING TRADE LIST HERE.

When writing to any of the advertisers on this page please mention the AMERICAN FLORIST.

E. G. HILL & CO.

Offer FIVE NEW CARNATIONS to the trade ready for delivery next month. These are the varieties that have figured so conspicuously at the different Exhibitions.

MRS. ROBERT HITT. Long stiff stems; flowers one-third Larger than the best Tidal Waves. In color brighter than Tidal Wave with finely serrated edges. A most prolific blooming carnation. Yields perhaps more flowers of fine form and size than any variety extant. We have never seen a flower that burst its calyx. We unhesitatingly recommend this superb variety. $12 per 100; $100 per 1000.

MR. JNO. THORPE SAYS: "I consider Mrs. Robert Hitt one of the most beautiful carnations I have seen. In competition with 60 new varieties at the great show in New York last spring it was next to the winner—Sea Gull. The charming color of Mrs. Hitt is not seen in any other variety, and as I was one of the judges at the New York show I felt that Mrs. Hitt should have won."

BEN HUR. A fine light pink with just enough salmon in it to make it attractive. This variety is of splendid habit, never bursts, and crops as freely as Silver Spray. Flowers extraordinarily large. Very stiff stems bearing fine crisp flowers. $12 per 100.

WHITE DOVE. A finely serrated edged white, of fine form and finish. Strong constitution but not coarse in growth. An unusually free blooming, long stemmed variety of great size. For free blooming qualities, strength of growth and splendid flower we believe this white variety is by odds the most valuable variety up to date. The strong clove fragrance is another point in its favor. $12 per 100; $100 per 1000.

ATTRACTION. Stem stiff and bearing a flower of a new shade which catches the eye at once. It is a soft rosy scarlet, but very brilliant in tone. Flower of good size and borne in the greatest profusion. $12 per 100.

INDIANA. Flowers very large and fringed, a grand upright, stiff stemmed variety, perfectly healthy and free of bloom. The ground color of the flower is a creamy white, very heavily flaked and pencilled in carmine pink. The largest and handsomest variegated carnation yet introduced. Flowers over three inches across and never burst. $12 per 100.

The above five sorts are all that could be desired in the way of stiff stems large, bold flowers, splendid constitutions, and free flowering qualities. They are par excellent for commercial purposes, commencing as they do, to flower at the beginning of the season and keeping up a continuous bloom the winter through. We have had dozens of testimonials and many press notices of these varieties.

OUR COMMERCIAL SET OF GRAND NEW CHRYSANTHEMUMS.

PRICE FOR THE 12 FINE VARIETIES, ONE OF EACH, $7.50 NET.

DR. COVERT. Bright golden yellow, perfectly double, nicely incurving; of great substance. This is a strong growing seedling of the Mrs. W. K. Harris type.

EDWARD HATCH. Color soft lemon suffused with pink. Winner of silver cup at New York for best pink.

FRED DORNER. Creamy white delicately pencilled pink. A large unique shaped flower, of a peculiarly pleasing shape and color. First prize at Orange, N. J., Nov., 1890.

JOHN BERTERMANN. One of the good things of the year. Creamy white in color; of great size and substance. Flower incurving from the center. One of the best for late blooming.

MRS. ROBT. CRAIG. Pure snow white, of Chinese incurving form. Silver medal and first class certificates.

MRS. MARIA SIMPSON. Color soft chrome yellow; incurving Japanese type. Silver medal at Philadelphia; certificate at Indianapolis.

MRS. L. C. MADERIA. A bright orange yellow, incurving Chinese. A splendid grower; very free in bloom Stems strong, flower very double and compact. Silver medal at Philadelphia; certificate at Indianapolis. This is the sensational variety of the year.

MRS. A. J. DREXEL. A large early flowering crimson variety. This is unique in form and color, and quite distinct. First class certificate at New York, November last.

MARGUERITE JEFFORDS Winner of the Whilldin prize at the show November last at Philadelphia. A spherical flower of fine amber color, a most pleasing shade.

C. B. WHITNALL. A large full flower of the Chinese type. Color a velvety maroon, shaded plum. Certificate at Madison Square.

O. P. BASSETT. A giant Cullingfordii, combining the characteristics of both its parents—Mrs. Wheeler and Cullingfordii. A strong grower; stiff stems. The finest red in existence. This fills the bill for a good high colored red.

With every set will be sent a plant of Black Beauty—the sensational prize winner at Philadelphia show in 1890, which we advertised last year but could not distribute on account of accident to stock plants. A double dark crimson variety.

Send for trade list. It has in it New GERANIUMS, a New Double White PELARGONIUM, NEW ROSES, and a host of other things that you need to supplement your stock with.

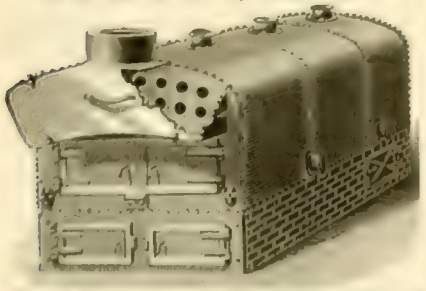
Cleaning Chimney Flues.

I had a chimney flue that troubled me a great deal to clean. I tried to get a line through by tying a cord to pussy's foot and coax her through but it wouldn't work. I finally succeeded by working as follows:



Making an opening near the boiler I introduced a ten-foot pole in the end of which was a nail to which the line was attached. This carried the line in ten feet and as far as my arm would reach. Then I made another opening as far along as the line had been already carried, and so continued until the line was through the full length, when it was tied to a stake at that end. After working the pole back and out again at the boiler end I tied to that end of the line a bag rolled up which when drawn through the flue to the other end by the line cleaned the flue nicely and it now works like a charm. Of course the openings were again closed up.

Seneca Falls, N. Y. C. H. GLEASON.

[Would it not have been well to have drawn a wire through with the bag, attaching it to the brick work at each end, to be used to draw a line through the next time you wish to clean the flue thus doing away with the necessity of subsequent openings except at the ends?—ED.]

PREPARE YOUR ADVS. NOW FOR OUR SPECIAL SPRING NUMBER MARCH 10.

A Bad Fire.

A press telegram announces that the entire plant of L. Templin & Sons, Calla., O., was destroyed by fire about 2 o'clock the morning of last Monday, Jan. 25.

The telegram states that the buildings and stock are a total loss and that the loss will reach $20,000, with only $5,000 insurance. The fire is supposed to have started from a defective flue.

The loss will be more severely felt as the busy season was just opening. They were mailing an edition of 100,000 catalogues.

They will immediately rebuild.

J. H.—We do not know where the metal box corners may be had. Should think that any large hardware supply house could supply them or tell you where they could be obtained.

WE ARE now gathering material for our annual special spring number and the many attractive features it will contain will make it an issue long to be remembered.

WE HAVE again been obliged to lay over several articles until next issue. All will appear shortly.

THAT new directory is still coming, but when it arrives you will agree that it was worth waiting for.

Notes from Washington.

THE BOTANIC GARDEN.

Midwinter, and even then during a continuous drizzle of rain or sleet, is a discouraging time to visit this garden, the Mecca of American florists. Here it is where our kind and genial vice-president reigns supreme, and where he has brought together the largest collection of plants in any one garden in America. The weather forbids any perambulations out of doors, but the glass houses are many and spacious, and as we pass along through them we cluster around Mr. Smith like children about a favorite teacher, absorbing the histories of the many rare and striking plants he directs our attention to, and the happy stories he has to relate regarding them. But these you had better hear from his own lips next August, when you attend the convention; and in the meantime I will note a few plants on my own account.

PITCHER PLANTS.—The nepenthes are the East Indian group. They are vines, with longish, flat leaves terminated by a tendril-like nerve with a pitcher at the end of it. In their native country—the Indian Archipelago mostly—the vines run 10 or 20 feet long; in our greenhouses, however, while we can easily get them as long as this if we want to, big pitchers, and many of them, are our main object, and we attain this end more effectually by an annual cutting back of the long vines. This induces a short, stocky growth, and renders the plants well fitted for growing in suspended baskets. Besides many species of nepenthes, Mr. Smith has quite an assortment of garden hybrids and varieties, some of which are tiny seedlings, with pitchers not so large as a baby's thimble.

SARRACENIA is the other section of pitcher plants. It is an American genus and abundantly represented in our swamps by the side saddle plant (S. purpurea). In the southern states also occur several other species, the commonest of which is flava; but psittacina, Drummondii, rubra and variolaris are also plentiful in their respective neighborhoods. In sarracenia the leaves are all radical, and in the form of hollow tubes, large and erect as in Drummondii, or small and twisted at the end as in variolaris. Both nepenthes and sarracenia are insectivorous, that is, they trap insects in their pitchers, and Mr. S. will tell you some queer stories about this provision of nature. In a cultural sense, however, not only are insects unnecessary for the welfare of the plants, but we can grow finer plants and finer pitchers without the insects than with them.

OTHER INSECTIVOROUS PLANTS.—The common round-leaved and oval-leaved sundews (drosera), found among sphagnum in our swamps, are also insectivorous. Mr. S. has several other kinds, some indigenous to this country and others to the Cape of Good Hope. At the ends of the hair-like bristles on the leaves hang little drops of a dew-like glutinous liquid, which proves alluring to small flies, and when they come to sip they get caught in the glue and cannot escape. Venus' fly-trap (Dionæa) is another curiosity. It is found wild in sandy bogs around Wilmington, N. C., and is one of the most wonderful plants in nature. The trap part is at the end of the leaf, and when open is not unlike a rounded-at-the-corners open book, bordered with finger-like bristles. On each face of the open pages are three bristles of exceedingly sensitive nature; in fact, they are the spring of the trap. A fly may alight on the trap and walk over it with impunity so long as it does not touch one of these bristles; but the moment it does the two leaves of the trap shut together with a bound, the finger-like bristles on the edge interlock, and the fly is a prisoner for life; that is, till the plant eats it up!

REINWARDTIA TRIGYNUM, usually called linum, is the bright yellow flowered plant a good deal grown in pots for Christmas work about Philadelphia. It is very showy when well grown, and always in bloom, but not as generally cultivated as it ought to be. Easily raised from cuttings. Plants one to two years old, nipped in a little to make them stocky, are the most available. Although the flowers drop in quantity every day, as flaxes always do, they are borne so profusely and continuously, that we fail to miss those of the day before. Because of their fugacious nature, of no use for cut flowers.

REINWARDTIA TETRAGYNUM is another species closely related to the last, but readily distinguishable by reason of its sulphur yellow flowers, longer leaves, and if anything, ranker growth. Mr. Smith is high in its praise. "Now let me tell you," he remarked, "if you want a gem of a pot plant for the holiday trade, grow that. Yes, and the other one (trigynum) too; you want them both, the golden yellow and the sulphur yellow."

RUSSELIA JUNCEA.—A dear old friend. Its slender, branchy, rush-like stems shoot up and droop again like a shower of vernal spray, jewelled with narrow tubular scarlet flowers. When well grown it is a pretty plant. Excellent for basket work, and of the easiest possible cultivation and multiplication—good qualities enough to make an old plant *new* again.

ARDUINA SPINOSA.—Now here is a little gem of a pot plant from the Cape of Good Hope. It was 9 or 10 inches high by nearly as much across, and a dense cushion of small box-like green leaves interspersed with many little spines and sweetly pretty fragrant white flowers. It will probably never become a popular

pot plant with the florist, but many an amateur would rave over it.

STIGMAPHYLLUM CILIATUM.—"Now, if you want a neat little vine to plant by a trellis or fence in your garden in summer, put this in your pocket and try it; it will please you, I am sure." So said our cordial guide. Here, give us your ear, Mr. Novelty: This vine is old as the hills, easy to grow, easy to propagate, easy to get up a big stock of, and it grows first rate in a sheltered, sunny place out of doors in summer and blooms beautifully. And the accepted English name of it is Brazilian Golden Vine!

VELTHEIMIA VIRIDIFOLIA.—A bulbous plant from South Africa, and which blooms at this time of the year. Of neat habit, with broad, deep green, slightly undulated radical leaves. The flowers are reddish fawn, tubular, in a dense raceme like a tritoma, terminating upright, stout scapes 18 to 20 inches long. An easily-grown, long-lived, pretty enough plant, but not striking at all.

"CALATHEA LEITZEI is, in the way we use aspidistra, rubber and such, one of the very best house plants we have got," said Mr. Smith. It is a glossy, deep, metallic green leaved maranta from Brazil, and seems to enjoy a place under the bench as much as on the stage.

PERISTROPHE SPECIOSA is a pretty plant from India, common in greenhouses, easy to grow and profuse, and it blooms most all winter long. Nice plants run from 20 inches to 3 feet high, and proportionately bushy. It has justicia like, deep carmine-purple flowers that, because of their great quantity, give the plants quite a showy appearance. I would not recommend it as a stage plant, but rather as a companion to Eranthemum pulchellum and the like, to stand near pathways in palm-houses and large conservatories for varietal effect. Raise a fresh lot from cuttings every year. Of no use for cut flowers.

ARBUTUS UNEDO is the strawberry tree of Southern Europe. It is not hardy in the northern states, but we grow it in pots or tubs as we do hollies, bay laurels and the like, and set them out doors in summer and winter them in doors, sometimes in a cool greenhouse, at other times in a shed or cellar. But as the strawberry tree blossoms in winter, it has a claim upon us few other half-hardy trees have got, and it gets greenhouse accommodation. Mr. S. has a large specimen in a tub in the cooler part of the conservatory, and every little twig is now terminated by nodding racemes of white heath-bell flowers. The name strawberry tree is given to it because of the resemblance of its scarlet fruit to the strawberry, and as the ripe fruit hangs upon the tree till it comes into flower again, they add materially to the beauty of this evergreen shrub—for it isn't a big tree.

FICUS STIPULATA AS A TREE.—"Look here," exclaimed Mr. Smith, "this plant is Ficus repens (stipulata) pure and simple. I obtained it by continuous selection, by cuttings from that little creeping thing there on the wall; but it took me twenty years to get it." The plant he showed us was a stout, branchy, tree-like specimen, about four feet high, and, except in a generic way, without a particle of resemblance to the creeping ficus so common in our greenhouses. Well, the leaves were shaped somewhat like those of the original parent, but many times larger and thicker.

JATROPHA PODAGRICA.—A curiosity among plants. Exceedingly odd and striking and beautiful in bloom. It is one of the fleshy-stemmed cactus-like euphorbias from tropical America. The plants are one-stemmed, about 20 to 24 inches high, 5 or 6 inches thick, and vase-shaped; smooth-skinned (that is, without any furrows or spines like a cactus), and perfectly leafless (at this time of the year). In fact, they rather suggested vase or urn-shaped blocks of wood. But surmounting each plant was an upright broad cyme of vivid orange-scarlet blossoms that at once rivetted our attention.

SCHAUERIA CALYCOTRICHA is name enough to kill the popularity of any plant no matter how good and desirable it may be. Let us call it the golden justicia, for this is what it is. It is a little Brazilian plant, 1 to 2 or 3 feet high, as the cultural conditions may occasion, and a winter bloomer. The plants if left alone have a one-stem tendency, but by pinching them when young they form branchy specimens. The flowers are yellow, and borne in terminal thyrses, and from their feathery appearance the heads are quite suggestive of yellow plumose celosias. It lasts in bloom a long time.

APHELANDRA AURANTIACA ROEZLII.—It was a pleasure to meet this vivid, orange-scarlet beauty. What a lovely race of plants the aphelandras are! And so charming for winter work. Beautiful in leaf and flower, and small plants bloom freely. Still they don't seem to make headway as popular plants, because, I presume, they require considerable attention to grow them well. Mr. Taplin used to do them splendidly in years gone by, at Such's nurseries.

PANAX "GRACILIS."—A little beauty. Quite suggestive of parsley, only more deeply incised. A lovely little plant for any decorative purpose. But I am somewhat ill at ease about the name "gracilis," and rather incline to believe that this is the little plant that was intoduced from Brazil a few years ago under the name of Panax crispatum. Will some one give us light?

ASYSTASIA (Henfreya) SCANDENS, a climbing vine from Sierra Leone, is, Mr. Smith says, one of the best plants to grow in a dark place in a warm greenhouse.

POLYPODIUM AUREUM AREOLATUM (sporadocarpum) was pointed out to us as being the bluest of all the glaucous blue fronded ferns.

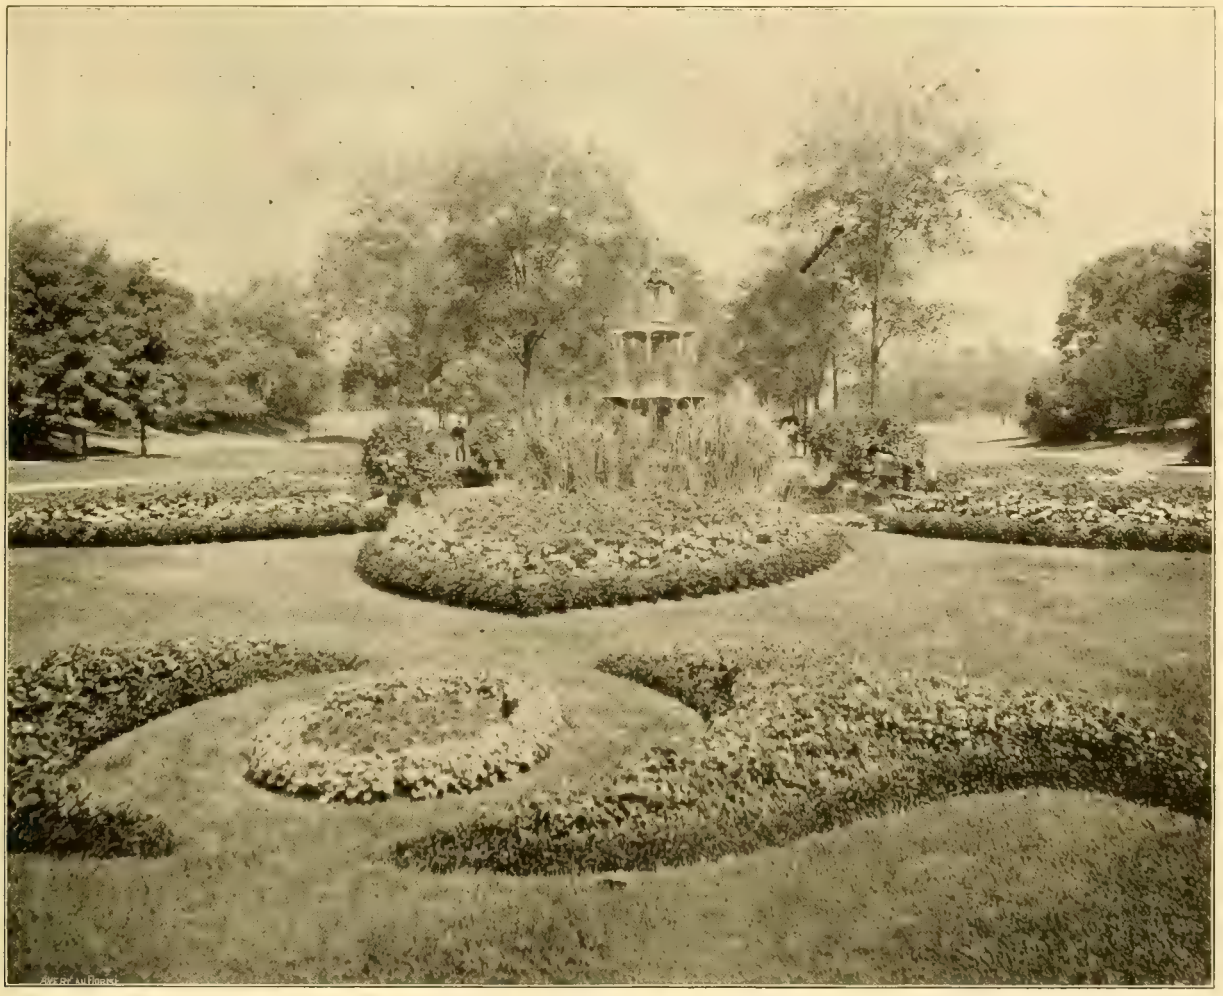
DAVALLIA TENUIFOLIA STRICTA.—Speaking of this plant, President Dean remarked, "perhaps the best commercial fern in the market to-day."

ADIANTUM CAPILLUS-VENERIS, commonly called Venus' hair maiden-hair fern, is indigenous to the southern states, central and southern Europe and many other parts of the world; but, except by fanciers and in large collections of ferns, not frequently cultivated in our northern gardens. In one of the small greenhouses on the wall under the side benches, we noticed a wealth of maiden-hair ferns. "Why, that's Capillus-Veneris," replied Mr. Smith; "it grows there of its own accord, spreads all over the wall, and is one of the best plants we have got to naturalize in such a dark, shady place as that is, under the stage of a cool greenhouse."

POLYPODIUM QUERCIFOLIUM.—Descending the steps going from one compartment of the large conservatory to another, we pass by a tall stump or pillar, completely incased with this long-running rhizomatous fern, whose broad, deeply divided and glossy fronds spread out in hundreds, a winning picture of tropical luxuriance.

STAGSHORN FERNS (Platycerium).—Mr. Smith prides himself upon his fine collection of these artificial looking plants. When they are well grown they are really handsome, and they are so tenacious of life and easily managed that we don't wonder amateurs have considerable partiality for them. Among those Mr. S. pointed out to us were the old æthiopicum from the Guinea coast; biforme from the East Indies; alcicorne, the elk's horn fern from temperate Australia, and its variety majus from Polynesia; Hillii, from Queensland; grande, from northern Australia, Willinckii from Java.

WM. FALCONER.



Electro-Culture.

Bulletin No. 16, of the Hatch Experiment Station of the Massachusetts Agricultural College, Amherst, Mass., is devoted to a brief summary of previous results in electro-culture and to a report of experiments made at the station. We give below a report of the experiments made at the station with lettuce grown under the influence of dynamical electricity. The full bulletin may be had on application to the station as above.

The following experiments were made at this station: Several plots were prepared in the greenhouse, all of which had the same kind of soil and were subjected to like influences and conditions. Frames in the form of a parallelogram, about three feet by two feet, were put together; across the narrow way were run copper wires in series of from four to nine strands, each series separated by a space about four inches wide, and the strands by a space of one-half inch. These frames were buried in the soil of the plot at a little depth, so that the roots of the garden plants set would come in contact with the wires, the supposition being that the currents of electricity passing along the wires would decompose into its constituents the plant food in the vicinity of the roots and more readily prepare it for the plants. Two electric gardens were thus prepared and each furnished with two common battery cells, so arranged as to allow continuous currents to pass through each series of wires. Near each electric garden was a plot prepared in the same manner, save the electrical apparatus. We will call the two gardens A and B.

The place chosen for the experiments was in a part of the greenhouse which is given up largely to the raising of lettuce, and the gardens were located where much trouble from mildew had been experienced. The reason for this choice of location was to notice, if any, the effect of electricity upon mildew, this disease being, as is well known, a source of much trouble to those who desire to grow early lettuce. The soil was carefully prepared, the material taken from a pile of loam commonly used in the plant house.

GARDEN A was located where mildew had been the most detrimental; the experiments began the first of January and closed the first of April. For the garden fifteen lettuce plants of the head variety were selected, all of the same size and of the same degree of vitality, as nearly as could be determined; the plants were set directly over the wires, so that the roots were in contact with the latter; the plants were well watered and cared for as in ordinary culture, and the fluid in the battery cells was renewed from time to time, that the current of electricity might

VIEW IN LINCOLN PARK, CHICAGO.

not become too feeble. At the close of the experiments the following results were noted:

Five plants died from mildew, the others were well developed and the heads large. The largest heads were over the greatest number of wires and nearest the electrodes. It was further noticed that the healthiest and largest plants, as soon as the current became feeble or ceased altogether, began to be affected with mildew. On examining the roots of the plants it was found that they had grown about the wires, as if there they found the greatest amount of nourishment; the roots were healthy and in no way appeared to have been injured by the current, but rather, much benefited by the electrical influences.

Beside garden A was prepared another plot of the same dimensions, having the same kind of soil and treated in like manner as the first but the electrical apparatus and wires were wanting. At the close of the experiments only three plants had partially developed and two of these were nearly destroyed by mildew—one only was free from the disease. The results, therefore show that the healthiest and largest plants grew in the electric plot.

In the second experiment, which we called B, twenty plants of the same variety of lettuce and of equal size were taken. The treatment given was the same as the plants in plot A received. Five plants only remained unaffected with mildew; seven died from the disease when they were half grown; the rest were quite well developed, but at the last part of the experiment began to be affected. Several heads were large, the largest being over the greatest number of wires and nearest the electrodes. Examination of the roots disclosed the same phenomena as in A.

Near plot B were also set twenty other plants, subjected to like conditions as the first, but without electricity; all but one died from mildew before they were half grown, the solitary plant that survived being only partly developed at the close of the experiment, and even this was badly affected by the disease.

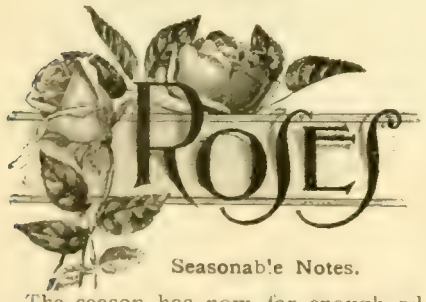
Everything considered, the results were in favor of electricity. Those plants subjected to the greatest electrical influence were hardier, healthier, larger, had a better color and were much less affected by mildew than the others. Experiments were made with various grasses but no marked results were obtained.

The question would naturally arise whether there may not be a limit reached where electricity would completely overcome the attack of mildew and stimulate the plant to a healthy and vigorous condition throughout its entire growth. From the fact that the hardiest, healthiest, and largest heads of lettuce grew over the greatest number of currents and nearest the electrodes, it would seem that electricity is one of the agents employed by nature to aid in supplying the plant with nourishment and to stimulate its growth. To what extent plants may be submitted to electrical influence, or what strength of current is best suited to them and what currents prove detrimental to their development, have not been determined as yet, but it is desirable to continue this research until some definite information shall be gained on these points. Probably different varieties of plants differ greatly in their capacity for enduring the action of electric currents without injury—experiment alone must determine this.

It has been proved that the slow discharge of static electricity facilitates the assimilation of nitrogen by plants. Faraday showed that plants grown in metallic cages, around which circulated electric currents, contained 50 per cent. less organic matter than plants grown in the open air. It would seem from the researches of the latter physicist, that those plants requiring a large percentage of nitrogen for their development would be remarkably benefited if grown under electric influence.

"Those Dark North Side Places."

ED. AM. FLORIST:—If I may be allowed to take from Mr. Scott's excellent answer to "E. G. B.'s" question the above caption as a theme I will give my experience with north side propagating.



Where there is much propagating to do I believe it pays to have a place or house set apart for the purpose. If you have to depend on a bench or section of bench in a house where plants are growing it is often difficult to regulate the temperature to suit both plants and cuttings and a

bench arranged like the one described below has given uniform satisfaction.

The house is 18x100, hip roof, running about northeast and southwest, with a partition about 5 feet from the north side, making practically two houses, one a ¾ and the other a lean-to house. A three foot bench leaves a convenient walk in this small house; over the walk are sixteen ventilators 3x3 feet. Under the bench are five steam pipes (very seldom more than three used) with valves arranged so that one or all can be used; the front of the bench is boarded up, with here and there a board that drops on a hinge; the back of the bench is completely shut off from the bottom heat also. With four inches of sand kept at a temperature of 60° and properly moistened and the air above at 50°, cuttings of roses, carnations, chrysanthemums, etc., root readily and produce good plants. The cuttings require no shading, except through the summer months, as the sun does not shine directly on the bed; it is not a dark place, but a well lighted and wholesome place, filled with pure air, and no mildew or fungus will be found there if the sand is properly changed.

One end of the house can be used for Rex begonias and such plants as do not require direct sunlight; here the side boards are taken off or dropped to allow of a warmer temperature overhead. The sand nearest these plants is used for cuttings of coleus, begonias, heliotrope, etc.

"NORTH SIDE."

Seasonable Notes.

The season has now far enough advanced to give some additional stimulant to plants that are growing very freely, particularly those growing on very shallow benches; to such, a weak liquid, made as previously directed, may be given once a week or ten days, according to the condition of the soil. For it should always be remembered that to water any plant while it is already moist enough, is simply doing much more harm than good. Better far, wait two weeks or even longer to get the soil in the right condition before giving liquid manure, than to run any risk by giving it to the injury of the plants. There are undoubtedly more plants, not only of roses, but of all other species, killed by over-watering and over-feeding than from all other causes combined.

A safe guide to follow before watering is to examine the soil carefully in several places where it looks the dryest, also where it looks moist; and if the soil will crumble when rubbed in the hand, instead of adhering or sticking to the hand, it can safely be watered; and when doing it, give it a good fair soaking, enough to thoroughly moisten every particle of it; but do not make it so wet as to appear like mud—though some soils can be watered much more heavily than others.

Where green fly shows itself, lose no time in exterminating them by the application of tobacco in whatever form has been found the best. Keep all weeds and dead leaves cleared off, as those only harbor and encourage insects. Syringe well under the leaves and the whole of the plants, except the flowers, on all bright mornings. This is much best done as early as can conveniently be done in the morning, so as to allow the surplus moisture to dry off before night. This will also save considerable fuel in a season, as a fairly dry atmosphere in the house can be heated and kept warm much more easily than a damp one.

The greatest enemy to a rose house from this time on are red spiders, for where they once get a footing it is very hard to exterminate them. Persistent syringing, with an occasional application of sulphur on the pipes when quite hot, are the best remedies—particularly if proper attention is paid to ventilation at all times.

J. N. MAY.

Salt in Water.

My roses have not done well and I suspected that the water I was using (drawn from the Arkansas River) was responsible for poor results. At the suggestion of the editor of the FLORIST I obtained an analysis of the water from the state geologist and he tells me that it contains 72 grains of matter in solution to the gallon, of which 61 per cent is common salt.

Will this amount of salt injure my roses? This is the maximum amount of salt the water ever carries as at certain seasons of the year the matter in solution does not exceed 13 grains, but usually the salt can be tasted in the water and in the fall of the year it is so strong as to be very unpleasant to the taste.

Little Rock Ark. M. W. HERRON.

Steam vs. Hot Water.

Many of the readers of the FLORIST are familiar with the results of the comparative test of steam versus hot water from greenhouse heating, carried on at the Michigan Agricultural College during the winter of 1889—90, which showed 24 % in favor of hot water.

The experiment was continued last winter with practically the same results. In addition to the records of the temperatures of interiors of the houses, an account was kept, for several weeks, of the temperature of the gases passing through the smoke pipes of the heaters, by means of thermometers inserted near the chimney. The average temperature of the gases in the smoke-pipe of the steam heater was found to be 25% higher than that of the water heater. As the heat given off by the coal consumed in the steam heater, was 24 % more than from that used in the water heater, the reason of the economy of hot water heating, can easily be seen if 25 % of the heat goes up the chimney in the steam, in excess of that lost in the water heater.

I enclose a letter recently received from Messrs. Joy & Son of Nashville, Tenn. giving the results of a similar trial which they wish brought to the notice of the world. As I know of no better medium then the columns of the FLORIST, I send it to you. It will be noticed that the hot water heater consumed about 24 % less than the steam heater, thus giving identically the same results as were obtained here in 1890, and practically the same as were obtained by Prof. Maynard at the Mass. Agricultural College.

Mich. Agric. College. L. R. TAFT.

Mr. J. Coenen, a florist of Louisville, Ky., has been making some experiments in this line that the world ought to hear of.

He has two plants, of four houses each, both exactly alike, each heated by a 20-horse-power boiler, one with hot water, the other with steam, 2-inch pipe used in each case.

He states that last winter it took 2100 bushels of coal to heat the range where steam was used, and only 1600 bushels for the hot water heated houses, and the latter gave him much the most satisfaction in other ways also. He is forcing roses. How is this for hot water in 2-inch pipes? JOY & SON.

Nashville, Tenn.

Orchids at North Easton, Mass.

The orchid houses of F. L. Ames are a splendid sight as present. Masdevallias, cypripediums, dendrobiums, odontoglossums and lælias innumerable are now in bloom, many of them being specimen plants of the rarest kinds. In a few weeks the Odontoglossum crispums, for which North Easton is noted, will be in bloom; also seedlings of great promise in dendrobium hybrids.

Cœlogyne spikes are showing by the thousand. One specimen of the pure white variety is two feet through, and will be grand. In the stove house are many elegant specimens of new anthuriums, and the beautiful fern grotto never looked more luxuriant than now. To enumerate all the new and rare orchids now in bloom would be an arduous task, but here are a few of the very rare ones which are in perfection at present.

Cypripedium Niobe, a beautiful hybrid between Fairieanum and Spicerianum; C. Polletianum, a hybrid between œnanthum and calophyllum; C. Sallieri aureum, hybrid between insigne and villosum; C. insigne Macfarlanei, an unspotted form, most beautiful and delicate; C. insigne Chantini, Philbrick's variety; C. bellatulum egregium; C. œnanthum superbum and C. Leeanum superbum.

Masdevallia Courtauldianum, a hybrid between Shuttleworthi and rosea, one of the best, flowers large (this is a specimen plant and has twenty blooms); M. Schroderæ, a beautiful new species, upper part of sepals sanguineus purpure, basal half white (this plant has fourteen blooms); M. ignea erubescens, deep-colored carmine stripes, very showy; M. Measuresianum, hybrid between Tovarensis and amabilis, a delicate form, white tinged with purple; M. seedling, a hybrid raised by Mr. Robinson from erubescens and Lindenii, it shows the character of both parents and is grand in form and color.

Lælia exoniensis, a Veitch hybrid, one of the best (this plant bears six large flowers); L. furfuracea, delicate rose pink, a pretty form, but smaller than autumnalis; L. anceps Amesiana, anceps Schroderæ, anceps holochila and anceps Williamsii; L. Sanderiana, a plant with fourteen spikes and forty four flowers; L. Gouldiana with fourteen flowers, and a plant of Stella bearing twenty-two spikes and seventy five flowers.

Dendrobium Murrhinianum, a hybrid between nobile and Wardianum, a large flower intermediate in form, color white tinged with rose, magenta disc; D. longicornu; Catasetum saccatum, the Pelican

BEGONIA VERNON (SEMPERFLORENS ATROPURPUREA).

orchid; Saphronites grandiflora rosea and Cattleya Trianæ alba, true.

Among the Odontoglossums are O. crispum, Vincksianum, pure white with brown spotting and rounded sepals and petals; O. Bonnyanum and the pretty O. Hunnewellianum, one of Mr. Robinson's own seedlings.

Cœlogyne.

There are a great many varieties of this species, many of them being very handsome, with flowers richly marked, and others again being small and inconspicuous and not worth house room. They are all evergreen pseudo-bulbous plants, the flowers generally produced with the young growth, and the leaves being perfected when the flowering season is over. I do not propose to describe the whole genus, as most of them are only useful to the orchid enthusiast, but shall confine myself to one variety, the most useful and easiest grown white orchid in cultivation, viz., C. cristata.

This variety does best in pots with peat and living sphagnum moss. They require good drainage and plenty of water at the roots during the growing season. When at rest they should have but little water. This variety does well in a cool house when growing, but when growth is completed it is best to place the plants in a warmer place and keep dryer, as if left in a cold damp house the flower spikes are apt to damp and get black. When in flower care must be taken to keep damp off the flowers or they soon spot. If the flowers are kept free from damp they will last for five or six weeks in perfection.

This is one of the standard orchids for cut flowers in England and as the taste for orchids for cutting is on the increase here there is no reason why it should not become as popular here.

The flowers of C. cristata are produced six or eight together in a drooping raceme, each flower being about three inches across, the petals and sepals undulated, pure white in color, with a blotch of yellow on the crests of the lip. It blossoms in February and March.

C. cristata alba is similar to the above in all respects except that it has no yellow on the lip, being pure white everywhere.

C. cristata citrina is a distinct variety, flowering rather later than the type. The lip is light lemon color and not yellow as in the ordinary form of the species.

C. cristata major is a much larger, stronger growing variety with very broad petals and much larger flowers than the original variety.

This is everyone's orchid. Rand says of it: "With an ordinary greenhouse it is as easy to grow and flower as a verbena."

Maywood, N. J. JAS. S. TAPLIN.

Carnation Crops.

In this issue of the AMERICAN FLORIST we desire to give some interesting figures on carnation culture. Our object is twofold; first, to revive one feature of communications which attained to much prominence and interest last winter; secondly, to give our reasons for being able to pick nearly twice as many flowers from the same number of plants as we did one year ago. We especially make this observation because we have seen no florist whose carnations are as prolific this season, in the vicinity of Philadelphia, as they were one year ago.

House No. 1. Planted Sept. 25, dimensions of house 25x100 feet, center of house planted in a solid bed 10x86 feet, with a two-foot path in the centre, contains 1,330 plants of Hinze's White. For November we cut 4,515 flowers; December, 4,723; to Jan. 15 inclusive, 3,192; total 12,430.

It is often said that Hinze's is only a cropper. Whoever makes that claim must acknowledge that, in this case, it is a long and big cropper. We expect to get 15,000 flowers from this bed between Jan. 1 and March 1. First, because the plants are improving daily, and more buds are in sight to-day than ever. The above figures show at a glance the first two months averaged $3\frac{1}{2}$ flowers per month per plant. The first 15 days in January show a greater average.

The side benches in this house and across one end are 4x217 feet, and contain 1,270 Grace Wilders, which produced for November 3,974; December 3,543; to Jan. 15 inclusive, 1,376; total, 8,893. An average for the Wilders for two months of $3\frac{1}{2}$ flowers per plant per month.

From the above figures every indication points to the Wilders being more of a cropper in habit than the Hinze's. The difference in their values, however, proves the Wilder to be the most profitable.

House No. 2 is about the same size, with side benches $3\frac{1}{2}$ feet wide; planted in the centre with roses in a solid bed. On the side benches are planted 1,120 Grace Wilders. The carnations do better in this house than in either of our 5 houses devoted exclusively to carnation culture, the flowers being larger and a better color. We do not attain this result at the expense of the roses, because they have done well all winter and promise well for the future.

These 1,120 plants gave for November 4,763; December, 5,007; to Jan. 15 inclusive, 1,629; total, 11,399. Average for two months, $4\frac{1}{2}$ flowers per plant per month. The average of the Wilders for both houses is 3.87 flowers per plant per month. As compared with the Hinze's, this is about 10 per cent. in favor of the Wilders.

From the above it will be seen that our average cut for this season to Jan. 1 for both varieties is 3.65 per plant per month. From the record at the same time last year our cut was 2.75 per plant per month. If we have made no error in calculation, it will be seen we are cutting one-third more flowers this year than last.

We attribute these satisfactory results to more careful and thorough culture.

Bristol, Pa. DEWITT BROS.

Begonia Vernon (Semperflorens Atropurpurea).

This new begonia seems to have been accepted as the most useful novelty in begonias that has been introduced for some time.

In habit and freedom of bloom it resembles the well known B. semperflorens rosea, but the flowers are a rich orange carmine and the foliage a glossy red. The stamens are yellow, which gives an especially brilliant effect to the staminate flowers.

It is thought that this begonia will be very popular as a bedding plant as well as for pot culture.

Callas.

We had the misfortune to have a lot of callas frozen one stormy night. They were just coming into bloom; would it be best to let them dry off a little before starting again? Have cut off all the leaves. Will we be able to get them in a salable condition by May, and how would be the best way to treat them? SUBSCRIBER.

New York.

Business with the city florists continues brisk. The only complaint one hears at present is of the scarcity of certain varieties which are in demand and the occasional tale of woe by the florist who has been "victimized" out of stock or good money by some of the many sharpers who are constantly at work in the big city. The tricks adopted by these swindlers, who in many instances are women, are, according to the mournful accounts given by their too-confiding victims, varied and ingenious, and clever indeed is the florist who does not sometimes get caught in spite of all his precautions.

A remarkable feature of the market this year is the almost entire absence up to the present time of hybrid roses, which have been in the past largely forced for early winter flowers. It clearly did not pay the growers, else we should still see the early hybrids coming in. An occasional handful of Magna Chartas is all there is to be seen in this line. Not even the old standby, Jacq, is obtainable. The result is that American Beauty is the only large rose and Meteor the only crimson rose offered in any quantity and both these varieties have been in brisk demand, the supply falling far short of the needs of the market. Some of the American Beauties coming in from S. C. Nash to Burns & Raynor are of unsurpassed quality and are about as near the ideal perfect rose as any rose can be. The funny classification of the Beauties according to length of stem is still in vogue and when a specimen happens to be just a fraction of an inch short of the stipulated length for a certain class it is as good as a circus to watch the controversy between buyer and seller. The tape measure or the rule is at once brought into requisition and if there happens to be a crook in the stem this is carefully straightened out while measuring and taken full advantage of.

Pink seems to be the most popular color in roses this season. The Madam Cusin, a few years ago classed among the cheapest and most undesirable roses, is to-day in the lead as a favorite and keeps alongside and sometimes ahead of the Mermet in price. Pierson of Tarrytown is sending in some of these which are superb in coloring and size. The Watteville also takes well in the prevailing taste for pink. At Young Bros.' the two rival claimants for popular favor, the Waban and the Hugh, are to be seen side by side every morning and are the occasion of many a warm argument. One of the best growers for this house is Ernst Asmus. His Meteors are first class and Madam Hoste as sent in by him is an ideal rose. He speaks highly of its bearing qualities and regards it as one of the best paying varieties, but it does not seem to catch the buyers equal to the Bride. The Bride is the great standard white rose here and some of the best in the market are coming from the original disseminator, J. N. May. The growers here appear to have learned the secret of making the carnation popular. All long stems is the rule, regardless of unopened buds, and the growers seem to vie with each other as to length of stems and quantity of foliage sent with their flowers.

Bulbous flowers have improved somewhat, tulips especially. These are coming in with good full flowers and stems of fair length. A few of the double varieties are beginning to appear. Von Sion narcissus still maintains the lead over all other varieties. The polyanthus varieties are totally unsalable and do not bring the growers enough to pay for original cost of the bulbs. Dutch hyacinths are sent in with the bulbs left on the spike. There is a fair supply of the Italian hyacinths offered and the quantity of white Roman is at present very light. Lily of the valley averages good as far as the flowers go, but is unusually deficient in foliage. Lilacs sell well, the purple tinted bunches seeming to be preferred to those that are pure white. The worst load on the market at present is smilax. This comes in by the barrel and is disposed of with great difficulty.

Harry Blizard, living at 52 South 5th avenue and well known in New York florist circles, was before the Harlem police court on Jan. 21 charged with stealing an overcoat from a house where he had been employed to attend to some plants. He was held in $1,000 bail for trial.

The committee having in charge the arrangements for the next chrysanthemum show meets every Monday for the present and is making good headway on the premium list, which will be published very soon. The question of a spring show in 1893 is also being considered and an exhibition on a scale of magnificence heretofore unequalled may be expected for that time.

The house of Adolph LeMoult was visited by burglars recently and a quantity of silverware and money was stolen.

J. A. DeVeer is about to remove his office from New York City to Northport.

Chicago.

It is a pleasure to report that in spite of factional opposition the governor last Thursday reappointed Gen. Joseph Stockton one of the commissioners of Lincoln Park, and that the Park will continue to have the benefit of Gen. Stockton's long experience and progressive ideas.

At the meeting of the Florist Club last Thursday evening, the committee appointed to ascertain whether those cemetery companies who had branched out into cut flower growing on a large scale had exceeded the rights conferred by their charters, reported, and the report, accompanied by copies of the charters of two of the companies, showed pretty conclusively that the companies had decidedly exceeded their rights. After some little discussion the club by vote instructed the committee to have the matter thoroughly examined by a lawyer of recognized ability, and submit his written opinion to the club at a future meeting. The sentiment was general that the club should take steps to see that the illegal competition of untaxed corporations was stopped, but it was felt that each step should be taken deliberately, and advised by legal counsel.

It was proposed by Mr. Sanders that the club undertake to supply a flag for the Horticultural Building at the World's Fair. In the discussion it was thought best to invite other clubs throughout the country to take part in the project, and thus make it national in character, and the officers of the club were instructed to ascertain the sentiment of the other clubs regarding the matter.

Mr. Hartwig paid the penalty for not having his essay prepared, and declared that it was cheaper for him than to give away all his trade secrets. There was a great deal of merriment over the affair, especially when Mr. H. announced the number of Garfield carnations it would take to make up the cost of the penalty. But it didn't take as many of his as it would of some other growers', for he grows them fine. Regarding the subject of his essay, Mr. H. says that when you grow the roses good and the carnations poor, the roses are the most profitable; but when you grow the carnations as they ought to be grown and the roses as they ought not to be, then there is the most money to the grower in the carnations. "Just as plain as A. B. C." says he. "How can you expect me to write an essay on such a simple matter?"

At the next meeting of the club Mr. E. Buettner, of E. Wienhoeber & Co., will read an essay upon a subject of his own selection, probably upon the violet and the violet disease. At the second February meeting Mr. F. Kanst, Sup't of the floricultural department of the South Park System, will read an essay on the growing and handling of bedding plants in large quantities, regarding which no man in America is better able to give instruction than he.

Mr. Alex. Newett lost his wife last week. Mr. Newett has the heartfelt sympathy of all in the trade in his bereavement.

Mr. Charles Reissig is down with the prevailing "grippe." The severity of the attack, in view of his advanced age, has seriously alarmed his family and friends.

Mr. Ernst Wienhoeber is also confined to the house by an attack of the prevailing disease. But the attack is a mild one, and he will undoubtedly be around again at an early date.

Chief Thorpe reports very numerous responses to the circular published in last issue, and that the display of the plants there named, and particularly cyclamens, at the Fair will be superb. The project of an International Chrysanthemum Show in the Horticultural Building next November is meeting with warm support on all hands, and a grand show seems already assured.

Mr. P. Blaumeiser of Niles Center, was married Jan. 26.

Rumors have been rife regarding a combination of Niles Center growers that was to make itself felt in the manipulations of prices, but nothing tangible has as yet resulted.

The committee from the Florist Club met the committee from the State Hort. Society last Monday afternoon and held a lengthy conference. On Wednesday the committees jointly presented the claims of horticulture in the state exhibit to the State Board, who control the funds.

St. Louis.

Last week saw white flowers somewhat scarce, this week finds just the reverse: so say our commission men, a statement the retailers verify. This has been a comparatively busy week. Balls, theatre parties and social gatherings of various kinds have all helped to keep things lively. Probably one of the chief events of interest, to the florist's eye, during the past week was the Firemen's Ball at the Exposition Hall, at least the florists doing business in that vicinity seemed well satisfied with the "haul" and wish such "happenings" would come oftener.

Mr. Tesson's roses are just coming in. Consignments of Beauties, Hostes and Brides just sent in by this crack rose grower can beat most of the shipments sent here from the east.

Mr. Hampt, our new wholesale man, is starting business on a principle new to the trade in this section. He purposes, as per notice sent to growers, to have his customers sign a ticket stating the price paid by them for cut flowers, etc. On

this ticket will be the grower's number. These pieces of cardboard are to be periodically sent to the various growers showing them quite conclusively that their wholesaler is not a fraud.

Mermets and Brides are bringing $2.50 per dozen; La France, Albanys, Bennetts, Wattevilles, Hostes and Woottons $2.00; Papa Gontiers, Perles and Niphetos $1.50; Valley and bulbous stuff in general has good sale at $1.00 per dozen; Mignonette $2.00; carnations at 75 cents to $1.00.

Messrs. Young & Sons, who by the way have just had published as fine a plant and seed catalogue as St. Louis has ever seen, have a nice show of pansies in full bloom. The flowers sell readily at 50 cents per dozen. This firm seems to be the only one to force that queen among spring flowering shrubs, the lilac. Sprays of this flower sell from 75 cents to $1.00 each.

One florist received a novel order for a wedding this week. It was for eight bouquets, one of which, the bride's, was to be of valleys and the other seven of loosely arranged marguerites, margined with their own foliage entirely, and just 300 in each bouquet.

Pres. Harrison is a carnation that sells well here. Its stiff stems and delicate coloring make it a general favorite. Perhaps its name has something to do with its popularity just at this time. The double daffodils sent in thus far have averaged good.

At the Missouri Botanical Garden the following is a list of the best azaleas now in full bloom: Mlle. Marie Rossel, a variety with beautiful, large, salmon colored double flowers; A. Dante, an old favorite, with its magnificent, crimson, double flowers; A. violaria multiflora, a small flowered but good variety coming rather later than the others, with flowers somewhat purple in color.

On Friday, the 29th inst., Mr. R. J. Lackland, president of the Boatmen's Bank and also president of the Board of Trustees of the Garden, in the presence of the board and others, went through the ceremony of planting near the new herbarium building a beautiful twelve year old specimen of the red flowered horse chestnut, Æsculus rubicundo. This tree is a hybrid between the common horse chestnut and the pink flowered, sweet buckeye. It is perfectly hardy with us, but not as generally cultivated in this country as its merits warrant. The specimen was moved from an obscure place in the garden, where it had a year previously been subjected to such root pruning as would induce it to throw out roots near to the trunk, thereby making it better able to stand the change and any subsequent ill usage. J. W. D.

Boston.

Flower trade is somewhat slackened up, and prices are showing signs of weakness, with the probability of a decided drop in the near future if the weather should be favorable. Carnations are getting quite abundant, but the demand for white ones is fully up to the supply still.

The florists all report a large amount of funeral work, in which, in many cases, they have been obliged to use Cape flowers and milk weed balls, on account of the scarcity of fresh material. There are violets enough for all demands, although it is difficult to understand where they all come from, as most of the large violet growers here have a lively dose of the disease on their hands, and houses that looked so promising a few weeks ago are now a sorry looking sight and can be smelled three blocks away.

There are a few hybrids and Jacqs coming in with prospects for an increased supply right along. Bulbous flowers are selling more slowly, and have dropped in price all along the line. Warren Ewell has begun his regular annual supply of pans of tulips, valley, daffodils and the like, and the florists' windows are gay with these tempting and most seasonable little arrangements for house culture.

Azalea plants are quite plenty and seem to sell well, and there are also some good genistas, cinerarias and Chinese primroses in market.

W. H. Elliott's new house, built especially for the culture of Asparagus plumosa, is a nine days' wonder to all visitors. It is twenty-five feet in height. Mr. Elliott explains that he "wants to give the asparagus room to grow." His stock of old plants of this variety is enormous, and young plants by the thousand in pots are tucked away in all available corners. His rose houses are all built on the side hill system, heated by steam furnished by a 90-horse-power boiler. His Gontiers are very fine this season, also his Mermets. The Waban is doing well here, and Mr. Elliott says he has no fault to find with the rose itself or its selling qualities. It comes very dark in color with him. His neighbor, Morey, is also cutting magnificent Gontiers, and the Mermets and Brides are very healthy. The best Mermets coming into the Boston market at present are from J. Frank Curtis, of Newtonville. They are grown in solid beds and have stems like walking sticks.

At W. H. Elliott's, Lawrence Cotter's and Waban Conservatories there are fine hybrids and Jacqs in prospect, but at none of these places has there been any effort made to get extra early crops of these roses, so that it will be about Easter time before they make any impression.

Ernst Asmus honored Boston with a short visit last week and made good use of his time while here, visiting a number of the prominent growers. As usual when a visitor of note makes such a tour, from constant additions to the party it becomes quite a delegation by the time it reaches the last place. A photograph of this party as it appeared mounted on an express wagon in the wilds of Dorchester would make a big card for the FLORIST, but, unfortunately, that part of it was overlooked, and a reproduction from memory would be very deficient.

Toronto.

Just at the present time King Grip rules the land. He is a hustler and manages to find out all about the interior organization of all his subjects whether they be Monarchist, Anarchist, Republican or Democrat. He is not popular either, but what can we poor mortals do but grin and bear it.

Cut flowers are scarce and in good demand, but still prices are low. The supply of roses seems to be especially short just now, but retailers cannot raise prices. Trade altogether in a kind of jerky condition.

Tuesday (26th) afternoon last was a mild afternoon and "old probs" did not give word of anything else, but after dark a big wind sprung up and before ten o'clock that night the thermometer was only two degrees above zero. Only that it came on before the night's firing up there would have been great wailing among florists and gardeners next morning and as it was some did get pinched a little. I have not heard of any great losses though.

For the last week or two back gardeners have been changing places at a lively rate. Mr. R. Marshall (formerly a florist) takes the place of Mr. Chapman at Col. Gzowski's place; Mr. John Brine, formerly with Mr. P. Mearns (florist), is now gardener to Mr. G. O. Bickford; Mr. A. Dietrich, late foreman to Mr. J. H. Dunlop, has pulled up stakes and gone to Indiana, by which move the club loses a good member and the city a good rose grower; Mr. H. J. Cole of Rochester, who lived some years in Toronto formerly, takes his place at Mr. J. H. Dunlop's. Other minor changes might also be recorded.

E.

Philadelphia.

Business the past week has been better there being quite a demand for good flowers. Hybrids have been scarce and Beauties are not up to the mark. Carnations are selling very well at good prices. Extra fine flowers sell readily and command fancy prices in the stores there being a great demand for fine pinks. The general run of prices is about the same as last week. Tulips and Von Sions are now coming in fine and selling well.

Mr. Grigg met a few of the growers by appointment and had a talk with them, in order to get their views on the proposed exchange. "Agitate," was the watchword of the Abolitionist, "agitate" is the watchword of the prohibitionist, and brother Grigg will have to adopt it, if he wants to live and see his project carried out. Competition is the life of trade but the average Philadelphia grower seems to want to sell to his customer in a corner by himself.

Shading Greenhouses.

Since it is out of the question to apply movable shades in the shape of rollers outside of greenhouses, then why should it not be practicable to have them inside? They might be made after the principle of window shades with self-acting rollers. Have them the width of the sash, or in other words, one shade between two rafters. Place the roller at lower end of sash near the wall plate. Attach a cord to the ends of the shades and run them through pulleys near the ridge. In this manner we could shade part of the house or all of it, as occasion would require. If unrolled at night time they would certainly keep out several degrees of frost. The rollers are cheap, and the cheapest cloth with the loosest texture would answer the pupose far better than more expensive stuff. I think plant-protecting cloth would be just the thing. If this should be universally adopted, there will soon be some Yankee who will invent an apparatus to shade the whole of a 300-foot greenhouse with a single crank. C. EVERDING.

Branford, Conn.

A VERY neatly gotten up circular offering cut blooms of orchids, has been received from Mr. H. Sunderbruch, the wholesale florist of Cincinnati. It is remarkably effective typographically, and at the top appears the following, in quotation marks: "If Solomon in all his glory was not arrayed like the lily of the field, the angels in heaven have no raiment more ethereal than the flower of the orchid." Harry, where did you find it?

News Notes.

OTTAWA, ILL.—Fred J. King is dangerously ill with combination of rheumatism and lung trouble.

MENLO PARK, CAL.—The crops in two rose houses of the Sherwood Hall Nurseries were lost by gas entering the houses from leaking pipes. The leaves all dropped off the plants.

KINGSTON, MD.—The greenhouse, stock and personal property of the late Thomas G. Harold, were sold at auction last month. The real estate, including the greenhouses and considerable nursery stock, have since been sold, but no one is carrying on the business.

PASSAIC, N. J.—Three large greenhouses belonging to Geo. Woolson, who is at the head of the horticultural department of public parks, were destroyed by fire on the morning of Jan. 27. The houses, together with their valuable contents, were a total loss. There was no insurance.

PITTSFIELD, MASS.—The officers of the recently organized Berkshire Gardeners' and Florists' Club are: Pres., Col. Walter Cutting, Pittsfield; 1st Vice-Pres., John White, Pittsfield; 2d Vice-Pres., Wm. Griffen, Lenox; Sec'y, A. H. Meredith, Pittsfield; Treas., H. P. Lucas, Pittsfield.

DENVER, COLO.—The Colorado Nursery Company is shortly to be re-organized and will commence operations on a large scale. The gentlemen interested are J. L. Russell, C. L. Burpee, of Rockford, Ill; Frank Bailey, F. W. Hubby, of Cleveland, Ohio, and Avery Gallup. The company has secured 45 acres in Myrtle Hill.

NEW BEDFORD, MASS.—At the last meeting of the Gardeners' and Florists' Club the old officers were re-elected to serve until January, 1893. It was decided to hold the regular meetings of the club on the second Monday of each month instead of the second Wednesday as heretofore. The meetings will be held in Odd-Fellows Building. Secretary Geo. C. Bliss has been confined to the house by illness for the last four weeks.

CHESTERTOWN, MD.—The residence of Robert G. Nicholson, the nurseryman, was destroyed by fire the afternoon of Jan. 26. The building was insured, but the loss of valuable papers will be a serious matter, as Mr. N. kept the more important documents connected with his business in a room of his residence. He was away from home at the time of the fire, and nothing of consequence was saved. Mr. Nicholson is a member of the S. A. F.

GRAND RAPIDS, MICH.—The many friends of Mr. Charles W. Garfield will learn with deepest regret of the untimely death of his wife, Mrs. Allie Garfield, which occurred Jan. 15. Mr. Garfield was himself confined to his bed at the time. Both suffered from pneumonia induced by grip. Mr. Garfield was first stricken and was gaining when his wife became ill. Against the advice of physicians, he insisted upon caring for her. The result was a relapse, and he is not yet out of danger, though in a hopeful condition at last accounts.

SAN FRANCISCO.—There was not over a half supply of flowers of first quality for the holiday trade, the supply of roses being particularly short. Prices ruled higher than ever before in the history of the city except in the early days when rosebuds sold for $5 each. There were plenty of fine poinsettias and Roman hyacinths though both sold rapidly and at fancy prices. California mistletoe was used to the almost entire exclusion of the imported, and locally grown English holly far outsold the Eastern American article. At date (Jan. 21) there are plenty of choice roses. Waban is rapidly supplanting Mermet. Plenty of narcissus, jonquils, valley and Roman hyacinths, and violets both white and purple, single and double. Carnations scarce. A few Harrisii lilies, cypripediums, tuberoses, chrysanthemums, etc.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

FOR RENT,

ON ACCOUNT OF BAD HEALTH.

Ten greenhouses with stock. This is one of the best places in the United States for shipping purposes. You can ship plants all through the South in Jan and Feb'y in open boxes, and that is a great advantage to a florist. You can establish a very large shipping trade from here south, as it is a great point to ship cut roses, as a man can ship all the roses he raises to Mississippi, Louisiana and Texas, and all other principal cities. There is one drawback to shipping roses from the North here—it is too far. This place has a large local trade and has been established since 1868, and is all heated by low pressure steam. We will be ready to rent by the 1st of June—with or without stock—and that is plenty time to plant your roses. Those that are planted in July produce more roses for the holidays than any other time. This is a good chance for a man to get a big start on a little money. For further information, apply to **H. MOORE, 54 Beal St., Memphis, Tenn.**

Special Attention.

First Importation of the Season of 100,000 pounds of

CYCAS REVOLUTA,

in sizes from 6 inches to 6 feet, **guaranteed to be the only TRUE LONG-LEAVED VARIETY**, which for beauty in foliage is far excellent to any of its kind; fast becoming a most favored Palm, highly recommended by most leading nurserymen and florists.

THE NUMBER of fires reported of late is a fair warning to all in the trade to take extraordinary precautions. Look carefully over your place for any dangerous points, and make assurance doubly sure by removing any possible source of danger. A few bricks and a few hour's work rightly placed may save you a very serious loss. Take care that the laconic legend, "defective flue and adjoining woodwork," does not form part of a report announcing the destruction of your place. An ounce of prevention is worth a vast amount of cure.

WE ACKNOWLEDGE the receipt from Mr. J. E. Felthousen, Schenectady, N. Y., of photographs of his coleus and geranium houses, that show his stock to be in very fine condition.

A. BLANC says: "Princes may die and others take their place, but where is there another Robert Craig?"

Collman, Corning; Vice-President, John C. Ferris, Hampton; Secretary, Prof. J. L. Budd, Ames; Treasurer, Silas Wilson, Atlantic.

SHELBY, MICH.—The Oceana County Hort. Society at its annual meeting elected the following officers: President, A. Adams, Shelby; Vice President, W. D. Markham, Hart; Secretary, B. Gibhart, Hart; Treasurer, W. H. Barry, Shelby. There was a large attendance and a good interest manifested throughout. Preparations are under way to show up Oceana County's fruit production at the World's Fair.

OWATONNA, MINN.—About 300 delegates were in attendance at the 25th annual meeting of the Minnesota State Hort. Society held here Jan. 20 to 23. A committee was appointed to carry on the agitation for the establishment of a national park in Minnesota, to embrace several million acres, for the preservation of the forests. The society will ask for a state appropriation of $15,000 to represent Minnesota horticulture at the World's Fair.

BENTON HARBOR, MICH.—At the last meeting of the Hort. Society R. Morrill read a paper on the subject: "How can we as horticulturists derive the greatest benefit from the Columbian Exposition"? The paper was elaborate and interesting and was discussed at some length. The following officers were elected for the ensuing year: President, R. Morrill; Vice Presidents, W. A. Smith, R. C. Thayer, W. L. Kane, S. G. Antisdale and L. W. Ruth; Secretary and Treasurer, A. J. Knisely.

DENVER, COLO.—At the annual meeting of the Colorado State Bureau of Horticulture held Jan. 15 and 16, the officers elected for the ensuing year were President, W. B. Felton of Canon City; vice president, W. B. Osborn of Loveland; secretary, Alexander Shaw of Denver; treasurer, John Tobias of Denver; directors — David Brothers, Denver, W. S. Coburn, Paonia, and J. E. Reynolds, Husted. A resolution emphasizing the necessity of establishing large reservations of timber land for the purpose of water conservation was adopted.

LINCOLN, NEB.—The annual winter meeting of the Nebraska State Hort. Society was held here Jan. 12 to 15. President Taylor in his annual report stated that in his opinion there has never been a fair adjustment in the premium list of the proportionate amount of money which should be paid to the florists in the different departments for their displays at the State Fair, and recommended that the list and rules and regulations be given a thorough overhauling. The World's Fair committee reported that they would endeavor to secure a supplementary appropriation of $50,000 from the state. Officers for the ensuing year were elected as follows: Pres., E. F. Stephens, Crete; 1st V. P., D. V. Reed, Blue Springs; 2nd V. P., O. F. Smith, Ansley; Secretary, F. W. Taylor, Lincoln; Treasurer, Peter Younger Jr., Geneva; Board of Directors, W. J. Hesser, Plattsmouth; D. C. Mosher, Lincoln; J. M. Russell, Wymore.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

T. W. EMERSON & Co., of Boston, Mass., Seed and Implement Dealers, have made an assignment.

MAIL TRADE in Philadelphia and New York is reported to be a week or more behind last year in volume.

THE Dingee Conard Co. have a fine four-page illustrated reading notice advertisement in the February *Century*.

A. W. LIVINGSTON'S SONS suffered serious loss of catalogues by fire in their bindery shop on the morning of January 26.

THE FIRM of E. L. Coy & Son has been dissolved, C. Herbert Coy retiring to engage in other business in Colorado. Edward L. Coy will continue in his own name.

AN EASTERN philosopher speaking of the introductory remarks in various seed catalogues says: "Mr. Shumway gets down from his seat and walks among the people."

Dwarf Budded Roses

The stock offered this season is of the same quality distributed by us last year and includes all the leading and popular varieties. Parties contemplating stocking up for spring sales will do well to place their orders at once, as plants are now dormant and can be shipped without any soil at reduced Express and Freight rates.

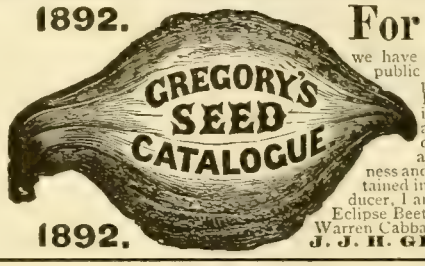
Lefebvre, Camille Bernardin, Duke of Albany, Eugene Furst, Earl of Dufferin, Gloire de Dijon, John Hopper, Jean Liabaud, Jules Margottin, Louis Van Houtte, Mme. Marie Finger, Marie Bauman, Mme. Victor Verdier, Mme. Eugene Verdier,

$15 per 100; $130 per 1000.

A fine lot of MARECHAL NIEL ROSES with canes 10 to 12 feet long, pot grown, very strong, $1.00 each.



HENRY A. DREER,
714 Chestnut St., PHILADELPHIA.

Burpee's Seeds Grow

And are Warranted First Class in every respect. We test all seeds both as to vitality and purity, hence we know there are few equal and none better. If you appreciate quality in seeds—and the best are the cheapest—write to-day for BURPEE'S FARM ANNUAL for 1892. It is a handsome book of 160 pages, illustrations true to nature, and several beautiful colored plates. It tells all about the best garden, farm and flower seeds, including Rare Novelties of real merit, which cannot be had elsewhere; it is a thoroughly trustworthy guide, entirely free from exaggeration yet progressive in every department. FREE to all who intend to purchase.

W. ATLEE BURPEE & CO., Philadelphia, Pa.

For Over Thirty Years

we have always had very pleasant dealings together, the public and myself, and I again have the pleasure of presenting to them my Annual Vegetable and Flower Seed Catalogue. It contains the usual immense variety of seed, with such new kinds added as have proved to be real acquisitions. Raising many of these varieties myself, on my four seed farms, and testing others, I am able to warrant their freshness and purity, under such reasonable conditions as are contained in my Catalogue. Having been their original introducer, I am headquarters for choice Cory Corn, Miller Melon, Eclipse Beet, Hubbard Squash, Deep Head, All Seasons and Warren Cabbage, Etc., Etc. Catalogue **FREE** to all.

When you write to any of the advertisers in this paper please say that you saw the advertisement in the AMERICAN FLORIST.

The Violet Disease.

I see by the Italian horticultural papers that the violet disease is very prevalent there, too, on violets grown in the open field (no glass) showing conclusively that some element necessary to the growth of the plants is gradually being exhausted from the soil.

The Italians counteract the disease somewhat by the use of the Bordeaux mixture, for which may be substituted the enclosed recipe for a cheaper solution of copper salts, which I cut from the *Massachusetts Ploughman*.

T. Greiner, the well known fruit grower, says: "The Bordeaux mixture, I believe, will soon be played out. It has various objections. First, it is expensive—much more so than simpler solutions. It is troublesome to prepare and troublesome to apply, as it has to be strained through a fine sieve, which is often quite a task, and even then it is apt to clog the spraying nozzle. Next, you get all soiled with the white, waxy stuff, and if it gets on fruit it sticks and perhaps causes more trouble. Why should we apply it at all when we have in the solution of copper carbonate in ammonia a liquid that is almost as effective in the prevention of plant diseases, much cheaper, and much more readily prepared and applied. The concentrated solution can even be bought prepared and with the required quantity of water added, is then ready for the spray. It goes under the name of "copperdine," costing only $1 per gallon, which quantity is sufficient to make 100 gallons of spraying liquid. At this cost we can afford to make two sprayings instead of one with the Bordeaux mixture, and then we save money."

I think the above well worthy of trial.

DENYS ZIRNGIEBEL.

JAMES FROST, Greenville, Darke Co., Ohio.

"I have no doubt whatever but what you can recommend this seed very highly as likely to produce some choice and distinct varieties." EDWIN LONSDALE.

"Golden Gate" Chrysanthemum Seed.

A remarkable strain saved by an enthusiastic specialist, collected from **choice varieties only,** and matured under the sunny skies of California. The grower of this seed writes (under date of October 28th, 1891):

"In regard to the Chrysanthemums, I have about 2,500 seedlings in bloom and coming into bloom. I will try and send you some of my best varieties. I always grow them in a natural way without disbudding, as that is the best way to test the true value of a variety. I keep the very best for seed and destroy the balance. I have secured some beautiful varieties the past two years."

Mr. Edwin Lonsdale, Secretary of the American Chrysanthemum Society, (through whom we received the seed referred to above) has tested the sample and finds it of very strong vitality, and adds:

"I have no doubt whatever but what you can recommend this seed very highly as likely to produce some choice and distinct varieties."

The seed germinated freely in 8 days. The whole stock of this remarkable strain of seed has been placed in our hands for distribution. Trade pkts. $1.00 each. Apply early. Stock limited. **JOHN GARDINER & CO., No. 21 N. 13th St., Philadelphia.**

☞ **Trade List of Seeds now ready. Send for a copy.**

Mammoth Verbena Seed.

NEW CROP NOW READY. Choicest mixed varieties in the brightest colors. Per trade packet, 50 cts.; 1-4 ounce, $1.00; per ounce, $4.00.

The strain we offer this year is far ahead of that sold last season with such satisfactory results. Only the richest colors have been retained, and the largest flowers selected for seed. Seedling plants are now preferred by the leading florists for spring sales because of their vigor and freedom from rust. With this strain to depend on there can be no doubt about the success.

DREER'S DOUBLE HYBRIDIZED PETUNIA SEED, so well known to the trade for the past 30 years, constantly improving by judicious hybridizing. Trade pkt. $1.00; small paper 17 cts.

DREER'S SINGLE GRANDIFLORA MOTTLED AND STRIPED PETUNIA. This strain will give splendid results in pot culture, as well as open ground. It is rich in colors and markings, and of largest size. ⅛ ounce, $2 50; trade packet, 75 cts.

Cobea Scandens.....per oz. 75c. Centaurea Candidissima, per oz. $2; per 1000 seeds, 50c.
Smilax Seed, per lb. $8 " 60c. " Gymnocarpa, " 50c. " " 30c.

FRED. ROEMER, SEED GROWER.
QUEDLINBURG, GERMANY.

Distilling Perfume from Flowers.

I see by the FLORIST that "Subscriber" wants to know how to distill perfume from flowers. I find the following a profitable way: Take Florence oil, salt and cotton batting, to be used in the following way: Soak the batting in the oil, place a layer in the bottom of a common glass fruit jar, then place the flowers, sprinkling with salt, and so on till jar is full. Then cork or seal tight and place in the sun for two weeks, then squeeze the oil from the batting and you have oil of roses or whatever kind of flowers you use; any kind of perfumed flowers will do. He can use his own judgment as to what kind to use. WM. WALKER.
Columbiaville, Mich.

American Carnation Society.

The first annual meeting of this society will be held at Buffalo, N. Y., on the 16th inst. Headquarters will be at the Tifft House. This meeting promises to be a most interesting one, and should be attended by every carnationist who possibly can.

Coloring Hydrangeas.

Can any of the readers of the AMERICAN FLORIST tell me what is the best liquid to use and when to use it to color hydrangeas blue? G. GEDULDIG.
Norwich, Conn.

YOU WILL certainly want a copy of our new Directory and Reference Book, to be issued this month. The price is $2 and it will be worth many times that to you. Order a copy now.

WHEN sending us small amounts in postage stamps, please select those of the 2-cent denomination.

R. W. CARMAN, General Agent,
291 AMITY STREET,
FLUSHING, Queens, Co., N. Y.

Treatment for Poisoning by Primula Obconica.

The following prescription is excellent for ivy poisoning and doubtless would be beneficial for the same trouble from Primula obconica. It can be had at most any drug store and is for external use only:

R. Acid Carbolic half a drachm, Ol. Sassafras one drachm, Ol. Juniper one drachm, Ung. Zinc Oxide (Benz) one ounce.

Apply externally four or five times a day.

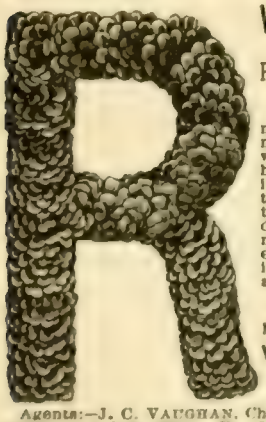
W. S.

I have found a salve made of oxide of zinc and vaseline, a certain cure for poisoning from Primula obconica. Keep it on hand, for the next time you touch the plant you will be poisoned again.

MRS. C. S.

Killing Greenfly.

In reply to Mr. Stafflinger, page 436, would say I have tried his plan for destroying greenfly and was pleased with it. There is not near so much labor connected with it as the old ways, and not so much liability to do damage to the plants. I found that with a four-burner stove I could use the tobacco stems just as well as the dust, only had to run the oil stove a little longer. I am so well pleased with this plan that could not be induced to return to the old method.



Seneca Falls, N. Y. C. H. GLEASON.

Propagation of Plants.

SOME GENERAL CONSIDERATIONS.

[Delivered before the Gardeners' and Florists' Club of Boston, by Prof. R. M. Watson, Jr., of Bussey Institution of Harvard University.]

No argument is needed to convince the plant grower of the importance of this subject. In common practice the various operations are not difficult, nor does it take long to find a way to increase the stock of any new plant which may be introduced. Some plants, from the nature of their growth, are multiplied slowly; but given a subject of good habits, the quick-witted gardener will soon find a way to obtain a stock with astonishing rapidity. It is not the details of every-day work I propose to bring before you this evening, but rather to take up some of the general facts which pertain to the whole art.

There are two general methods of propagation,—by seeds and by buds, both natural, perhaps larger numbers of wild plants grow from seeds than from buds, but there are numerous cases where propagation by buds obtains without the intervention of man; e.g., the normal increase of the strawberry by runners, of the black-cap raspberry, by root tips, like the walking fern, not only propagating itself, but providing fresh soil for its subsistence; an example of reproduction and of adaptation. It would not be difficult to cite cases where all our artificial forms of propagation are found in nature; it is not fair to speak of one method as natural and another as unnatural. Propagation by seeds is sexual, by buds it is a-sexual; i.e., reproduction by the organs of vegetation is common to both fertile and sterile plants. The seed is a plant in embryo, formed by modes not unlike those which are found in the animal kingdom, and which, when subjected to the conditions necessary for germination—viz., warmth, moisture and oxygen—expands into the likeness of its progenitors. The bud, or bud producing material, is a part of the plant only, but if placed under the proper conditions it is capable, in most cases, of acquiring those organs which it lacks, and thereby becomes an individual which differs in no respect from the parent. To this last statement there are some exceptions, however, variegated plants present some peculiarities; variegation is not always transmitted by the parts of the plant used in propagation by the organs of vegetation. A root cutting of the variegated prickly comfrey will often give a wholly green leaved plant. The ivy-leaved geranium, L'Elegante, will revert to the type, if propagated by the leaves; a green leaved abutilon, if grafted on a variegated abutilon, will show variegation in its new growth. Bud variations or sports are not uncommon in cultivated plants; e. g., the rose and chrysanthemum. It is quite within bounds to suppose that occasionally they might occur on those parts of the stem which had been selected for cuttings. Something might be said still further in connection with propagation by grafting on the reciprocal influence of stock and scion, but perhaps it will be better to consider this later. While, however, it is true that, in most cases, buds, and parts of the plant capable of producing buds, will reproduce the parent exactly, this is not true in reproduction from seeds. There is always a tendency to vary among seedlings. This is taken advantage of by the gardener, either to obtain new varieties, or, by reducing the variation as much as possible by selection in fixing a variety, and thus obtaining what is called a race.

Certain forms of propagation, which, however, are not very practical, apply to many classes of plants, and might be considered almost universal if structural difficulties did not prevent; for instance, you can readily understand that all plants could be layered, were it not that certain herbaceous plants, like tulips and hyacinths, have no persistent stem, thus rendering it impossible, and that others, like some palms, would be destroyed in the operation; you might "swop" plants, there would be no increase here. More convenient methods have taken the plan of layering in modern gardening. It is astonishing that we still read so much in the European horticultural journals about layering carnations, when we know how easily we strike them from cuttings.

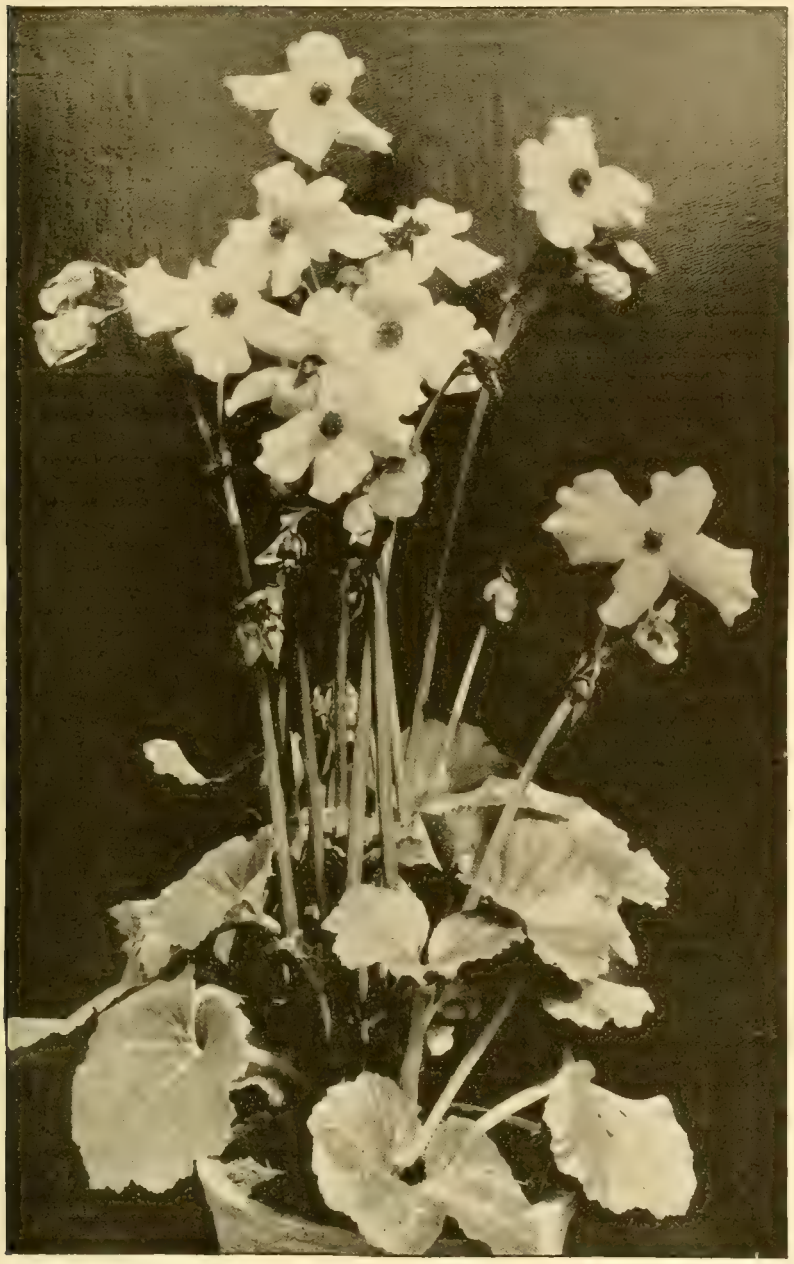
Propagation by seeds is by no means universal, even in the restricted sense in which layering might be considered as universal. There are plants which produce no seeds; others give seeds in limited quantities; they are handled with difficulty, and are hard to obtain. Most important plants produce seed which will not come true; they will not reproduce the parent; e. g., most apples, pears, etc. All this means that the propagator, the grower, has a choice in certain cases, in others he has none; that sometimes, his choice is determined by the nature of the plant and sometimes by the circumstances of the case. He cannot propagate Gen. Jacqueminot roses by seeds; they must be increased by bud. He has an option between grafting in one form or another, cuttings of growing or ripened wood, and layering. His preference will be determined by various points, whether he wants a single plant, a dozen or a thousand; whether he grows them under glass or in the open air; whether he has experience or is a novice.

Let us consider in detail the plants, or rather the classes of plants, which are propagated in these two general ways, by seeds and by buds, having in mind that we wish to extend our stock, and are not directly seeking to obtain new varieties. We have three large and

important classes of plants increased by seeds; viz., true species, fixed varieties or races, and good strains. The first—true species—includes native plants collected from all parts of the world and grown in our collections as we find them growing in nature, without any improvement except that which cultivation affords; our native oaks, elms and maples, palms and cycads, herbaceous plants or garden annuals, trees or shrubs, provided they have not been changed by the gardener's art. All these will come sufficiently true to the parent to enable us to be sure that we are growing what we are seeking. There is, however, with these plants a little variation. The best example I can give is one found in the results of the European nurserymen in growing for many years large numbers of their native plants in this way. Take, for instance, the great variety of the English oaks, the sycamore or Norway maples which are offered in the foreign catalogues. These are sports obtained from the seed beds, the gardener observing the variation from the type, culls them out and multiplies them by buds. If American plants had been increased by seeds in such quantities as European plants have been, we should doubtless have many interesting varieties which would probably be most useful in our plantations.

The second class of plants propagated by seed comprise those in which, by repeated sowing and careful selection, the important and desirable qualities have been fixed, so that they will be repeated in the offspring; i. e., come true. Examples are most abundant among our vegetables, garden annuals and biennials, and in some bedding and greenhouse plants, generally plants of short life or quick maturity, where the necessary process does not require too much time. It is said that Mr. Rivers, the famous English fruit grower, has, in the course of his experiments in obtaining new varieties of peaches, so fixed certain characteristics that some strains of seed could no longer be used for his purpose. In other words, he unintentionally made a race of new peach trees which would come true from seeds; such occurrences are uncommon in trees and shrubs, but could undoubtedly be obtained if the process was not such a lengthy undertaking.

In annual and biennial plants fixation is not difficult, and is well understood. An observant grower finds a sweet pea of a purer or different color, of better shape or earlier in flower; it is isolated as much as possible, and the seeds are carefully saved. On the second sowing several plants are found which show the same desirable qualities. The other plants are discarded. Seeds sown from the selected specimens, when sown the third year, will exhibit a still larger percentage of those marks by which the gardener was first attracted. This work is continued until all the seedlings are practically alike, then the race is fixed; we have a new plant which will come true from seeds.



The third class of plants propagated by seeds is not separated from the second by any sharp or well defined line. We have here certain plants of which we say we have good strains; e. g., the true cineraria, calceolaria and cyclamen. We mean that they can be increased by seeds which will give not only good results, but that the offspring will be alike in many particulars. We expect a plant of good habit of growth, either tall or dwarf, with well formed and substantial foliage, and a flower of good shape and texture. There is variety in the color of the flowers. The tendency of modern gardening seems to be to change the strain into the race, and this is by no means undesirable. In the old days we propagated many plants by cuttings, at expense of time and room, which are now easily grown from seeds. This class is increasing in numbers, and will doubtless absorb many plants which are now handled in other ways. In the transition state, our verbenas, gloxinias, pansies and primroses may suffer, but the improvement seems to be in the right direction.

The classes of plants propagated by buds are readily defined. They are the plants which will not come true from seeds; plants like the banana, and pineapple, which produce no seeds, and plants like the willow, the seeds of which, although coming true, are handled with such difficulty that this form of cultivation is unprofitable. In these classes we find much more diversity in the details of handling than among those plants which are propagated by seeds. Bud propagation gives the gardener the best opportunities to exercise his skill and ingenuity in order that he may produce the best results at the least cost. Although large numbers of these plants, particularly those which can be produced from cuttings of the stem, either of growing or ripened wood, are handled with complete satisfaction, and present little or no difficulty in their management. There are many of which this is not true; for example, those propagated by grafting in some of its various forms. We have much to learn in regard to propagation by cuttings of the root, and perhaps in regard to propagation by cuttings of the leaf.

In propagation by seeds, few alterations are presented. We must provide the conditions necessary for germination; we sow small, slow growing or rare seeds under the glass, the large, common seeds of great vitality in the open air; we cover the one with the least possible quantity of soil; the other is planted deep. Sometimes we must know that seeds must be sowed when gathered, and if this is impossible, they must be kept moist until they can be planted, as when maple seeds gathered in October are stratified with sand until the ground is ready in April. We must duly regard the differences in time required in germination, and always be ready to give great care and attention to the young seedlings. These details are limited, and comparatively little can be done to improve our present methods. Whereas this is true of sexual reproduction, there are no such limitations in propagation by buds. A much longer range of subjects presents many interesting problems, to the solution of which we must look for better and cheaper plants.

We ourselves have seen many improvements in methods of propagation. I have already mentioned a case where cuttings have wholly supplanted layers. We see the old modes of layering and inarching disappearing with and superseded by, cheaper ways of grafting and by cuttings. The late Mr. Peter Henderson showed that bottom heat, a close frame, and cuttings cut to a bud or heel were not necessary for rooting many plants used in large quantities. The labor so saved is enormous. The best tribute to the author of an improvement of this kind is found in the number of his followers. It seems as if the number of plants propagated by cuttings might be extended. In this connection, the question of which is best, a plant on its own roots or a grafted plant, comes forward, and brings up the whole subject of grafting in its many forms, presenting interesting and curious problems.

Here the details are not simple, as in propagation by seeds. Many questions arise which cannot readily be answered without field experiments on an extended scale, and continued for many years with the utmost care. It is easy to talk about the deterioration of varieties which have been propagated for years by buds. We know in our own experience of such cases, and perhaps it is easier to say that such and such a plant is "run out" than it is to confess that we can no longer get it in good condition. We may be surprised to find it thriving in another garden, or in some other part of the country, and so begin to think that other causes than the method of propagation are at fault. Many of the most important points seem to hinge on the question of grafted plants as against plants on their own roots, and an easy answer could be given, which would apply in many cases. A plant on its own roots is certainly better than a poorly worked plant. If the manipulation is defective, if stock and scion are not closely related, if even then there is a decided difference in the rates of growth, the grafted plant would be discarded. On the other hand, we all know plenty of grafted plants which have given entirely satisfactory results for long periods. Are these points of sufficient importance to warrant any expensive experiments? As bearing upon this, the question comes up, how shall we get plants on their own roots, provided this is found to be the better way of growing them? I doubt if we should go back to layers. Many could doubtless be increased by cuttings of half-ripened wood grown under glass, perhaps by cuttings of this same wood grown in the open air; probably grafting would still be practised, but in some such way that the scion would ultimately be furnished with roots of its own; this is by no means uncommon now. We could easily improve many of our present methods of working by paying more attention to the choice of stock, looking for closely related plants and those of vigorous but not too vigorous habits; the element of hardiness in stock is certainly to be considered. I would like to make a suggestion here in regard to this matter of grafting, and that is, in relation to the reciprocal influence of stock and scion. It is unnecessary to again speak of the well known case where variegation is transmitted, as in the abutilon, either way; is it not possible that a good deal of the talk which is made about changes in the nature of the grafted plant is due entirely to a physical or mechanical cause; i. e., wholly outside of any constitutional change in the plant? The example of pear worked on quince is a case in point; the rate of growth in the pear is greater than in the quince. Why does not this difference operate to form a constriction of the same nature as girdling, not so quick in its most marked result, viz. killing, but fatal in the end unless the scion gets roots of its own. This would account in a measure, for the improvements we obtain in higher color, size and flavor, while the imperfect union would account for precocity, dwarfed growth and short duration. Sometimes it is desirable to obtain what we call dwarfs by grafting. Is it not possible to find stocks which will give such results without shortening the lives of the plants so obtained? If one could do this we should have an excellent example to illustrate the influence of stock on scion. We see a pear grafted on pear

BEGONIA BAUMANNI.

lasting a life time, but worked on quince we have a short-lived tree. We are not eager to set out grafted plants unless we know something about them in advance. Certain facts which we do know about these matters tend at times to shake our confidence in regard to others about which we ought to be reasonably sure. Experiments could be undertaken which would easily settle them.

Almost all the work accomplished in this direction has been done by men who have been doing something else at the same time, by gardeners who have had their crops to grow and their living to earn. It is not unreasonable to suppose that in the near future we can look for a satisfactory solution of some of the problems in regard to propagation of plants, to men who are, in a way, trained for the purpose. The government makes large appropriations for the State Experiment Stations all over the country. It seems as if from these stations we ought, in time, to get important results, for here there is not only experience in plant growing, but also experience in observing and in drawing correct conclusions from observations. In the meantime, every little helps, and, by such gatherings as the present, our immediate fund of information is likely to be increased.

Begonia Baumanni.

We present herewith an illustration of this new sweet scented tuberous begonia, from which so much is expected. It is anticipated that this will not only be a very popular plant, but that in time the hybridizer will be able to make it the parent of a race of sweet scented sorts. The variety illustrated was discovered in Bolivia. The flowers are bright rose in color. A complete description appeared on page 442 of our issue of Dec. 31 last.

The Advantages of a Florist Growing Specialties.

BY A. M. HERR.

[*Read before the February meeting of the Florists' Club of Philadelphia.*]

MR. PRESIDENT AND GENTLEMEN:—This is a subject that should be carefully weighed on each side by anyone contemplating going into the growing of specialties and would require a great deal more time than I have been able to devote to it to do it justice. I will give a few of the most prominent reasons or advantages and also a few of the disadvantages and hope the members will help to throw a little more light on the subject.

It is an open question whether it is a question of the advantages of growing specialties; is it not more an actual necessity? We Americans are constantly wanting the best of everything; very often that is not good enough, so to cater to this taste is it not necessary that we devote our whole time and attention to one or two particular plants or flowers and get them up in such shape that they will meet the demands of the market?

To make a success of growing specialties it is necessary to follow the scriptural maxim in regard to the straight and narrow way, turning neither to the right or the left, but keeping steadily working our way to that goal perfection. It is doubtful if we will ever reach perfection, in fact it is very doubtful if any of us could define the word perfection in flowers. Within my own recollection there have been some wonderful and one might almost say some apparently impossible improvements in the rose, the chrysanthemum and in the latest rival for honors, the carnation. Take the carnation as an instance; there has been an ideal set up and all hybridizers and growers are trying to reach it, when it is reached there will be a still higher ideal set and so we can go on indefinitely, never reaching the end unless as some people think we will perfect ourselves in eternity in the line of thought or labors we are occupied with on this mother earth of ours.

It is this continual striving for improvement that makes the growing of specialties a necessity, for no one who is growing a variety of plants can give the necessary attention to getting the best results from any one of his plants without neglecting in some way part of his other stock. It is true sometimes the mixed grower will carry off the honors on a certain line of plants in competition with the grower who has made a specialty of that same line, but these instances are rare and we generally find that the winning plant or flower was the especial pet of the grower to the neglect of others, or perhaps his soil and location may have been so especially adapted to the wants of that plant that they grew to perfection without any special care or attention; in this latter case the best thing for the grower to do would be to drop all other stock and turn his time and attention to this one plant and thereby increase his profits perhaps tenfold.

Another advantage of growing specialties is the ability to concentrate your mind more on the plant or plants you are growing and thus you will often notice and act on many little points that would escape the attention of the mixed grower entirely. It is often these little points combined that help to make success. The practiced grower in one line, as roses or carnations, will in walking through a house notice little points that one who has not his mind constantly on the one thing will not see even if he looks for them. This is one of the really important

advantages, although rather small looking taken by itself.

Another is the opportunity offered (especially if you are just starting your plant) to plan and build so as to meet the needs of what you want to grow, and everything from the boiler house to the office can be so arranged as to save time, labor and patience. There is no reason why a man, and especially if he is going to grow only one or two sorts, can not have as well arranged a plant as any manufacturing establishment. Again you have the choice of location and can go where the plants you want to grow are naturally at home, that is where there is soil that is adapted to the growing of them, of course bearing well in mind one thing, the distance to nearest shipping point.

There can be also quite a saving in the labor on such a place over where there is a general assortment of plants grown, it being easier to train the laborers into such a routine of work that will make the place run itself almost. Giving a man a regular routine of work he becomes so accustomed to it that a mistake is seldom made and he also is more likely to become an adept at the work than if continually moving from one thing to another, as is necessarily the case where a large variety of stuff is grown.

Another great advantage is the ability to go into the market and buy your supplies in large quantities; you can get the bottom market price on everything where the buyer of small quantities has to pay the highest market rates.

The advantages from these points will not run up into the thousands, but they will make quite a difference in the total of the expense account at the end of the season. The day is fast coming if it is not here already when competition will make it necessary to watch carefully every expenditure and at the same time raise the standard of our products to such a point that they will find a ready market at a remunerative figure in competition with other growers. This may not be a particularly pleasant picture to contemplate, but it is a fact that we will have to acknowledge and make our plans accordingly.

The growing of specialties will of course be confined principally to wholesale growers, as it would hardly be advisable for a retail grower to run into only one or two plants, although I have seen this done with an apparent show of success in a small sized town. It might and no doubt would be profitable in the larger cities to make a specialty of one or two plants, grow them to perfection and find a good market for them and at fair prices. But in a town the size of Lancaster the market for one or two varieties of plants would not be large enough to warrant anyone going into the specialty business, unless he has a good wholesale outlet. Here another question comes in, whether it pays to run a wholesale and a retail business together. The only way it possibly can is to grow specialties and then I have my doubts about it. One or the other is bound to suffer and it makes unpleasantness as well as loss all through the season. Anyone now doing a business both wholesale and retail will if they keep an accurate account of the expenses and returns of each soon find that their profits will be considerably larger if one or the other is dropped. I can not offer any comparison as to the difference of the profits between a wholesale and a retail trade, but where there is a good retail stand I would as a looker on judge that the retailer was the better off of the two.

My own retail business was very short lived, as my situation was not a good one for that business. The first season I bought some roses from our worthy president, attempted to grow them, carnations, smilax, etc., and make money off my native town; the result was that I did not quite starve, but Mr. Craig came very near not getting the money for those roses. The carnations grew, the other plants attempted to grow, but only grew ashamed of themselves and died. Naturally the next season I grew more carnations and so every season I have dropped one or two varieties until now I have nothing but carnations. The past few years by very hard labor, long days and strict attention to my specialty I have made a little money. Had I at once gone into carnations alone I might have had considerable more, as in a review of my time in the trade (not a long one) I see some pretty heavy losses that might have been saved if I had been giving my time and attention to one instead of to one hundred things. I give this sort of biographical sketch merely to show that in my case at least it was an advantage, or rather a necessity, to go into the growing of specialties. I do not know whether specialties is the proper word, it would better be specialty, and not only specialty, but only a few varieties of that specialty. It has been my experience that it will pay better instead of growing twenty to forty varieties of carnations to grow only the best of each color or the one that gives the best results on your soil, and grow it well, than to plant four to ten of each color and expect them all to do well. There is as much difference between the likes and dislikes of one carnation and another as between different varieties of plants and it will pay any grower to study and carefully note those that seem best adapted to his soil and location and pay attention to them only. Unless I am very much mistaken somewhere there will be more money in your pocket for the convention next summer than if you were to grow the large number; of course in establishments carrying out this idea there would have to be one or two test houses to test the new sorts as they came out and pick the cream from them. If it were not for the demand for the variety of color I do not know but what it would be a good idea to grow only one variety; it could be grown to so much better advantage that the profits would be considerably larger and the expense considerably smaller.

There is, however, this drawback to the growing of specialties: If through any unforseen misfortune or some unexpected perversity of nature there should be a failure of the crop there would be nothing to fall back on to help one over the season. In a mixed place if one thing fails there are enough others to help out on the loss.

It would be folly for anyone to start out with the idea of growing specialties without first assuring himself that the soil and location will be adapted to it. I had a visitor here to-day from a section in which he said it was impossible to grow roses without getting soil shipped there from other sections. It would be a waste of time and money as well as of energy to attempt the growing of roses as a specialty in such a locality in competition with sections where they naturally do well.

Summing the whole together it will always pay better to grow specialties when growing for wholesale trade. But it is well to remember that all is not gold that glitters. It may sound like the jingle of silver or the rustle of greenbacks to hear that a certain man has sold so many thousand of a certain variety, but often back of that is a loss on some other enough to considerably reduce the receipts through the run on the variety in demand. This is a subject that will become more prominent every year and I hope some one more able than I will give us a few pointers.

Employer and Employed.

BY JOHN N. MAY.

[*Read before the New York Florists' Club Feb. 8.*]

Why your committee on essays should select me to deal with this subject is somewhat of a conundrum to me, and will, I fear, result in a disappointment to the members of this club generally, for the very reason that I cannot speak intelligently of any branch of this subject except so far as relates to the growers of plants and flowers only for wholesale, as it is many years since I had anything to do with any other kind of employes or have in any way been interested in studying their particular position, because I find my time fully occupied in looking after my own business. Furthermore I am a little at a loss to understand in what way or from what particular standpoint I am supposed to treat the subject, and as the notice—six days—was too short to admit of correspondence relative to the subject, I will in the following give my plain, unvarnished ideas on both sides and leave the members at full liberty to criticise what I may say, in the hope that some suggestions may result from the same whereby both sides may be mutually benefitted.

As I interpret the meaning of the request, namely, "Proper attitude of Employers to Employes," it is that I am supposed to tell employers how they can get more work out of their employes and then advise the other side how they can get their wages for less work, or something of similar nature; rather a hard nut to crack, I admit, and I fear some of both sides or perhaps all may have a desire to crack my nut for the advice. But the employer should, in the first place, select the best kind of help the market affords. I prefer active, intelligent, honest, trustworthy and sober men and boys, pay them a fair wage, according to their ability, and, if they are inclined to idle the time away, get rid of them as soon as possible and put a more conscientious one in the place. Always insist upon strict attention to their duties during working hours; to start work punctually at the regular hours, and then, having gotten a fair day's work out of the employe during legitimate working hours, let them quit work as punctually on time as they have to begin it; this, from long experience, I have found the best means of keeping a place in good running order.

If it should be necessary—as it often is in our business for a part of the help at least—to commence work somewhat earlier than the regular time, always give them clearly to understand that such is the case when engaging them, and generally it is much better to pay them some little additional wages for such services; but when it is absolutely necessary to have extra work done in the evening my advice is to pay them so much per hour extra for such work; but avoid the extra hours all you possibly can, thereby giving them some chance of recreation, but avoid giving them the opportunity to "get even" with you, as I have often heard it expressed. This relates to where they are called upon frequently to work extra hours at night without pay. Such men

will often be found late in the morning and if spoken to will have a very ready excuse that they "more than made this time good," and he will also be very apt to slight much of his work during the day to husband his strength for night work. Furthermore he will often want half a day to play base ball or some other excuse. Personally, from long experience, I do not favor giving any half day Saturdays for them to get their fingers smashed or such like pleasures, because it will take them all the next week to cure the same at the expense of my time and work. But, if they want to have a holiday, let them have it all at once and for the rest of the time insist upon their attending to their duties regularly from Monday morning until Saturday night, for plants and flowers need attention all the time. But have all the work done up by Saturday night, thereby relieving as many as possible in turn of Sunday work.

Where men are furnished with board on the place be sure that the food is abundant and good and their sleeping quarters clean and comfortable. Provide the means of recreation on the place, if possible, such as a few books, periodicals, a paper or two, etc. Treat them kindly; and an occasional chat for a time in the evening will do much to get them interested in the welfare of the place.

Never scold without real cause and then only in such a way as to convince them of their wrong doing or neglect of duty. Abusive language will certainly do more harm than good. Kind treatment, with firmness, or, in other words, well oiled machinery in good repair, will always work much more satisfactorily than corroded or rusty wheels.

Should any of the plants or stock get into an unhealthy state try and trace its source before blaming the man in charge.

If an employe suggests something which looks like an improvement in working the place, or anything which shows that he is giving the matter some thought, try and encourage him as much as practical to carry out his ideas, and should it be any improvement do not hesitate to give him credit for it.

But I might go on for an hour and still have something to say, so will now remark to the employes that the first thing to consider in going into this business is that if you do not want to apply yourself constantly and diligently to one business you should never go into a florist place to work, because it absolutely needs all your time and thought. Furthermore, if the business does not pay a fair percentage on the outlay, you cannot expect to get your wages at the end of the week or month, as the case may be; and the only way it can be made to do so is for every employe to do a fair, honest day's work for the wage he is to receive; and remember that ninety-nine per cent of our practical florists in this country to-day have served a hard apprenticeship to their business and know thoroughly well how much work an assistant ought to do in one, two or ten hours. So do not flatter yourselves that when your employer is not watching you he cannot tell whether you attend to your work or not, for the employe who thinks he can idle away his time or neglect any part of his duties and not be quickly detected makes a very grave mistake and one that will be sure sooner or later to cost him dearly. Such men soon become known and are not wanted anywhere. But, if after having given these points careful consideration, you can conform to the above advice then try and get employment. Do your best and attend carefully to the work allotted to you, no matter what it may be; and always remember that to become thoroughly conversant with any business you wish to follow it is absolutely necessary to learn everything appertaining to it and to do so you will often have very many things to do which may not be as pleasant or agreeable as you would wish, but make up your mind to do it cheerfully and half the work will be overcome. By giving your mind to the work in hand you will soon become proficient in it and will be appreciated accordingly; but do not fall into the very common error of thinking you have learned it all in a few months. If the place and employer suit you stay there long enough to become proficient in some of the particular branches which may be carried on there, then when opportunity occurs ask your employer to recommend you to some other place where you can gain further

KILLING GREENFLY.

experience. By strict attention to your duties and giving your mind to them you will soon thereby convince your employer of your desire to do so and he will recompense you accordingly.

In every place you serve you will find different ways of doing things; observe them carefully, but always try to follow out the instructions given you as nearly as possible, but if you think you can suggest any improvement in the way of doing any particular thing wait until a favorable opportunity offers, then make the suggestion in the form of a question: if your employer is a sensible man he will quickly see if there is any merit in the same and act accordingly. But do not attempt to carry out any of your own ideas in this line without first consulting those by whom you are employed, because if you do and any failure arises from the same you will get the whole blame of such failure.

The greatest benefits to be derived from experience in different places are to watch carefully and make a note in a memorandum book kept for such purpose of all the different ways of doing each and every kind of work, the time it is done and the after results carefully recorded, then in after years by carefully comparing them all it is easy to draw your own conclusions and profit by the same. This course will be found invaluable to you when you start in business for yourself some years hence, as it will often aid you to avoid mistakes which we are all very apt to make—the best evidence of which is shown in your committee's choice of the man and manner of entertaining you this evening.

To Kill Greenfly.

Take a 6-inch pot, enlarge the hole to about one inch diameter, make a little supporting framework of wire around it, with a handle over it like a bucket and feet to keep it about one inch up from the ground.

With a hatchet, large knife, or better still, a hay cutter, cut up some tobacco stems about ½ inch to 1 inch long, fill the pot with these and light through the hole in the bottom; set this in the greenhouse path and it will burn like the tobacco in a pipe, giving off a strong odor and burning from two to three hours. There is no flame and no dense smoke, but a very strong odor. The stems should be dampenough to bend up easily. If too dry they burn away too quickly. A candle is best to light it with, as, like a pipe, it does not always get a good light the first time from a match.

If this works, please tell me what will destroy the little black fly that eats the flowers on alyssum, I believe it is the same that is so troublesome to cabbage. If I can get as sure a remedy for it as my flower pot is for greenfly I will have made a valuable exchange of hints.

KŒNIGA.

Violets.

Undoubtedly a good many florists have seen at some time or another plants growing remarkably fine under what we would consider adverse treatment; such is the case with me this year with the above plants and as some of us are now thinking a good deal about them I will give you an account of their behavior.

We have grown violets for years, but have never seen in house or frame the so-called disease until this season. Last year a house we had of them were very fine, starting flowering the beginning of November and ending when the sun got too hot for them in the spring. The frame which is always used for the same purpose was only fair, the plants having luxuriant foliage, but not a quarter the number of flowers to the same number of plants as we gathered in the house. This year, however, the tables are turned, those in the house have only just started flowering anything to speak of. Some of their leaves in the early part of December began to wither at the edges and had the appearance of having been burnt a little with fumigating. They had had their usual care and treatment and I was at a loss to account for it. The affected leaves were picked off and a very little of it has appeared since. The plants were checked and would not flower till now. However, they are beginning to throw up their buds freely with the promise of a good crop. The frame is splendid; healthy, dark green foliage and lots of fine violets. It is heated by steam and the circulation being bad the pit cock is always left simmering quite a good deal, almost continually emitting steam and hot water in cold weather. This causes the first three or four sash to be almost always bathed in moisture, the plants dripping with water; here is where we pick the finest and by far the most flowers to the same number of plants and have done so for the last two months. The temperature at this end ranges from 60° to 70°, while at the other 40° to 50°. This causes me to do a good deal of thinking, as I have no doubt it would anyone else who considers it. The conditions are more favorable for an

orchid than a violet. We have had more sun than usual this season and I have noticed both in the house and frame where the plants have been exposed to its full rays they are stumpy, while at the ends, where it is shady, they are thrifty. One thing is certain, where the sun has not had any power on them not a speck of the disease was apparent, but where they got it full they were the worst. Now the weather is wintry and the house covered with snow they are growing and flowering. JOHN THOMAS.

Chester County Carnation Society.

The Chester County Carnation Society met in Kennett Square, Pa., Feb. 6. There was a good attendance and an increased interest manifested, a number of ladies favoring the society with their presence.

The committee to prepare a memorial on the death of Charles T. Starr and Nathan Baker presented appropriate resolutions which were adopted.

The committee on "Sale of Flowers" reported a general expression favoring unity of action in the disposition of cut flowers. A circular prospectus of a proposed wholesale market in Philadelphia was read and discussed. Mr. Jos. Phillips of West Grove, presented the pros and cons of the sale of flowers through commission men. He was impressed with the outlook for the future of the carnation and with the increased demand, and considered it imperative that, to secure just returns for our product a change should be made in the mode of selling. He suggested a Board of Directors with a supervision of the sale at one central point. The secretary approved of a supervision that would grade the flowers and sell accordingly.

A number of fine specimens of seedling carnations, and some of the older kinds were on exhibition, notably from Mr. Brinton: Excelsior, a fragrant white on erect stems, Lady Martha and Delaware of Chester Pride type. From Edward Swayne, Aurora with the Ladenburg cup, and Grace Battles from Mr. Edwin Lonsdale; the latter was new to a majority of the members, and attracted much attention. A letter from C. W. Ward recommended the use of Bordeaux mixture for "spot" disease. Plants set in five-inch pots and plunged in soil were not affected. Carbonate of copper and ammonia diluted and syringed were found to be beneficial. Plenty of fresh air and clean growth is of importance. Pres. Ladley had found a dry Bordeaux mixture with a large excess of lime mixed with sufficient water to reduce to dust entirely efficacious against "spot."

The subject of temperature for production of flowers being presented, Mr. Phillips described a visit to Mr. Wm. Swayne and Pres. Ladley and seeing beds of Lamborn and Portia a mass of bloom and buds, in perfect health, grown at a night temperature of 40°, or less on many nights.

Notice was given of the meeting of the American Carnation Society at Buffalo Feb. 16. The meeting elected President Ladley as delegate to represent the society at the Buffalo meeting. C. J.

American Carnation Society.

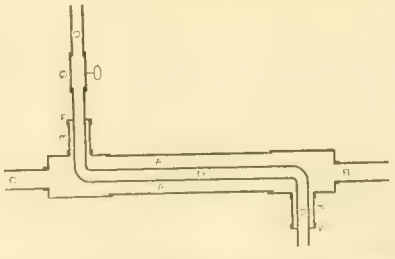
Next Tuesday (16th inst.) this society will assemble at Buffalo to hold its first annual meeting. An excellent programme has been prepared and the meeting promises to be a very important one to all growers of carnations.

An exhibition of flowers of new carnations will be held in connection with the meeting and this will certainly prove a most interesting and valuable feature.

This young society possesses an unusual amount of vigor and enterprise and will certainly make its influence felt. May the meeting be a large one, that the society may confer its benefits on the largest possible number.

Hinze's White.

In reading carnation notes by W. D. Lane in issue of Jan. 14, I notice that he recommends a heavy soil and a rose temperature for Hinze's White. I would like to see a sample of Mr. Lane's Hinze's grown as above. JNO. IRVINE.



Bay City, Mich.

Tempering Hydrant Water by Steam.

Florists who get their supply of water from the street mains find it pretty cold in winter—say 45°. And when put on plants that stand in a temperature of from 60° to 70° it is a pretty cold treatment to give them, so I have chosen a method of my own to take the chill off and find it very easy to bring the temperature of the water up from 45° to 58°.

With the aid of the accompanying drawing I will endeavor to make my plan plain.

A is the water reservoir, a piece of 3-inch pipe, 3 feet long, with thread cut on each end. To this is connected two Ts, one on each end with opening for ¾-inch pipe and 1-inch pipe. B is the pipe connecting with the street main and is of ¾-inch pipe. C is the discharge pipe from

reservoir, ¾-inch and carried in the houses to convenient place to connect hose to. D is the steam pipe, ½-inch, leading from boiler and passing through the body of water, A, in the 3-inch pipe. E is a 1-inch pipe, 4 inches long, with thread cut on both ends and connected to the 1-inch opening in T. F is a 1-inch cap, with a hole drilled through it just so that the ½-inch steam pipe will pass through and this is screwed on to the piece of 1-inch pipe (E) with packing inside of cap to prevent the pressure of water from forcing its way out and making a bad leak. G is valve on steam pipe leading from boiler or steam main near at hand, and when you have one-half pound of steam on boiler you can commence to water at once by opening valve G, and it will keep the temperature of the water at about 58° as long as you have any steam on your boiler. I have let it run the whole size of the 3-inch pipe for one-half hour and found the temperature the same all the time. The steam can be returned back to the boiler if desired by making connection with drip pipe back to the boiler.

About the only thing to look out for is not to stop watering for too long a time, for the water would get too hot and would injure some of the tender plants. When obliged to stop watering for any length of time I find it best to close the valve on the steam pipe.

The apparatus should be placed in the house nearest to the street main, so that the water for all the houses will first pass through it.

I have used this ever since the water got too cold to use on the plants and it has worked very successfully with me. I hope it may be of benefit to other florists who are using steam heat or who can otherwise command the steam pressure.

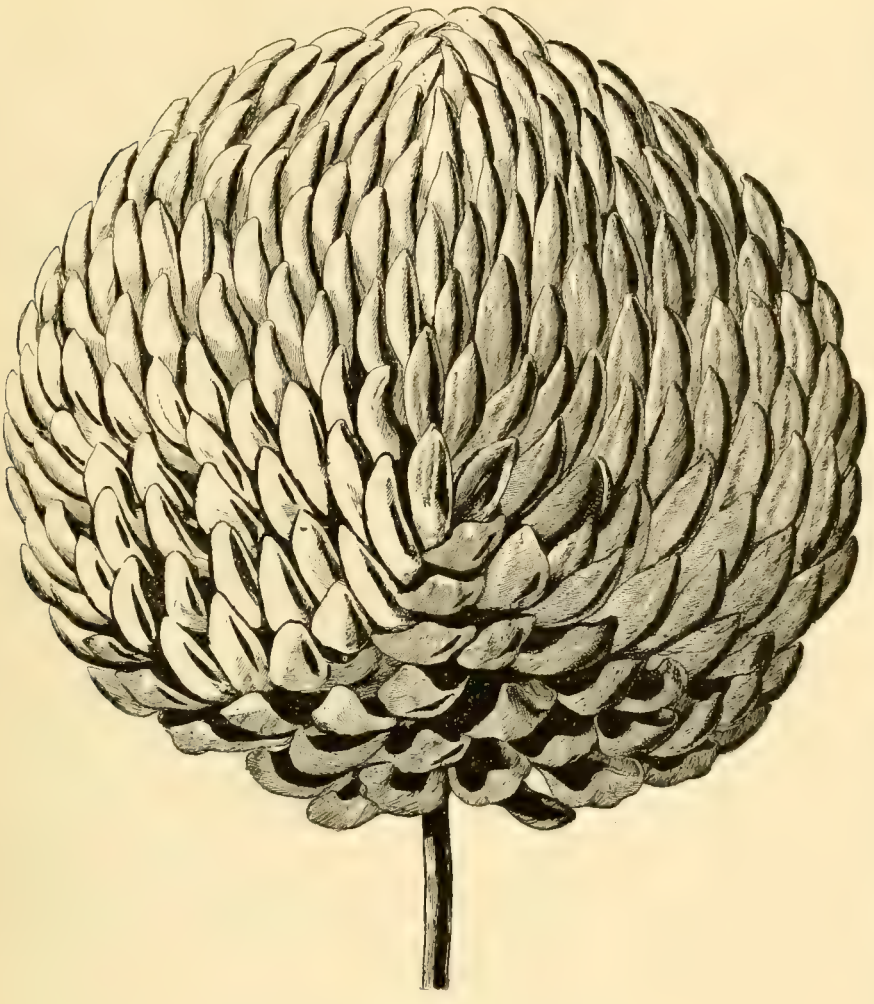
New Haven, Conn. B. W. SMITH.

New Rose, "The Hugh."

We have received a dozen blooms of this new rose from Mr. Frank L. Moore, Chatham, N. J., with whom it orignated. It is a sport from the Mermet.

Certainly these blooms bear out all Mr. Moore claims for the rose as regards color. The flowers are a deep shade of pink, such as is seen in the Mermet when that variety is at its best, and the blooms are large, full and well formed, the stems long and dressed with beautiful foliage. They stood the long journey admirably, and were kept in a warm office for a considerable time before showing the effects of the unfavorable position. They faded slightly, but were to the last of a much deeper color than any of the Mermets now coming into the Chicago market. Growers who examined the blooms at this office were very favorably impressed with them, and we certainly were. If the rose has the constitution indicated by the stems and foliage of those sent to us, it will undoubtedly take an important place in our list of cut flower roses.

Rose Disease.



In a recent issue J. K. wishes to know what is the matter with his roses. If he will give a little better discription of the disease perhaps I can assist him.

Does he live in the coal districts? What is the general condition of his soil? What is the subsoil, and how does it act when pressed in the hand while damp?

ARROW.

Chrysanthemum Sports.

Regarding chrysanthemum sports Mr. G. Henslow, in a paper read before the National Chrysanthemum Society of England, says: "It would seem from a study of sports that the chrysanthemum contains two means at its disposal. One is a force which causes the sport to reproduce an ancestral form which had existed before; a second, when, by a new combination of its internal forces, it produces an entirely new and original color or form altogether. We cannot tell to which class a sport may be referred, unless we possessed every sport that ever existed, for comparison. But that no new sport can

CHRYSANTHEMUM MRS. L. C. MADEIRA.

arise without some alteration in the surroundings, as ingredients in the soil or climate, I think all evidence concerning plant-life tends to show. I do not mean to imply that the sport need immediately follow some alteration; for if we regard the formation of flowers as the result of forces, we know that forces may accumulate, lie dormant or remain potential till circumstances occur which, so to say, liberate them. So that a new feature may take generations, for all we know, before it can make itself apparent; or an old character may lie dormant for ages. Hence, to produce sports, the more varied the surroundings can be made; so, I believe, is the greater chance of sporting to be induced."

Chrysanthemum Mrs. L. C. Madeira.

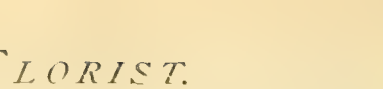
The accompanying illustration gives a very good idea of the form of this novelty. The color is a deep golden yellow, and the petals are in the form of heavy closed quills. The foliage is fine and heavy and the plant free flowering. The variety was awarded a silver medal at Philadelphia and certificates at New York and Indianapolis.

WHEN writing to advertisers please mention the fact that you were induced to write by the advertisement in the AMERICAN FLORIST. You will benefit us by letting advertisers know that it is the FLORIST that is bringing them trade.

Personal Recollections of Louis Menand.

IV.

From that time the community at large seemed more inclined to *win* laurels than to *cultivate* them, and I think they were right in that occurrence. The abolition of slavery was more glorious than all the exhibitions put together. The war which has elevated the supremacy of the Anglo-American race—Americano-Yankee progeny! This last appellation suits me better. In it I feel the pulsation of the shaking of the hand of our Uncle Sam! The supremacy of that sublime *monotype* nation! I say monotype emphatically, for what other nation on the whole surface of the globe, after the victory of the federal armies over *old prejudices*, would have used such clemency, behaved so generously with the vanquished? None! except that magnanimous Russia, that would have done something that Yankees! would not have done, to-wit: hang half of the vanquished and send the remainder to Siberia for life. That war which has elevated the supremacy, the glory, of the grandest Republic in the world to the highest altitude, exalted the bravery of that improvised army, that many "pygmies" (mentally speaking) said was fond of *playing* soldiers. Indeed they were fond of playing, so fond of it that in 1865 our Uncle Sam, to make them give up the idea of continuing the *play*, with that "Scoundrel the Third," had to intimate to the French army in Mexico to evacuate that country; that the soil, the spot, was too *hot* for their comfort, and that the sooner they would leave the better; he (our uncle) was not obliged to re-intimate the hint. It was readily understood, as by intuition, and complied with, with double quick alacrity.



My commentaries on the resolutions of the "fifth element" and on the war, have distracted me from my subject, the exhibition. I do not remember well, but I think it was inferior to previous ones. The most attractive feature, strikingly so, was a lot of Coleus Verschaffeltii, exhibited for the *first* time, by a Mr. Townsend (I do not recollect the initials), of Brooklyn. The plants were well grown and their brilliancy was dazzling—at least they produced that effect upon me. As I drew near them I took off my hat out of admiration and sighed deeply with eager desire to get some of them, or at least some cuttings. I did not know the owner or I would have introduced myself to him as a "professor of cutting" and ready to give him a demonstration of my skill in vegetable anatomy. But he was not in the hall and I never saw him. And yet I got the cuttings on the same day! How? You will know soon. Having seen all I wanted to see I left the exhibition room—I mean the Academy of Music—that I had seen for the first time and the last. Then I went to New York, to see the secretary of our horticultural society to get some information. I was hardly in his office when I saw a branch of our *coleus* before I saw him—standing in a glass of water on his desk. I went to the desk, took the glass in my hand and presenting it to him I asked him where he took it, or *hooked* it perhaps, I forget. He answered me that I was very prompt in judging others with my own feelings. "But," he said, "I suppose that you would not dislike a portion of it, even if stolen." I answered that I would not. He took the branch and cut off for me one or two joints. Now, do you realize how I felt when I held a section of that coveted plant in my hand? I confess that I forgot for a moment my disappointment at that trinity of deceptions that weighed on my heart when I left Brooklyn: the transgressions of the "element" in having passed the resolution on "foreign exhibitors," the determination not to award me any first premiums whether deserved or not, and not expecting to get any coleus cuttings, that I did get, and without cutting my fingers! That coleus was one of the best *weeds* that I ever had. A *weed*! will you say? Well, this qualifying adjective is not of my own coining. It belongs to our old friend Mr. Wm. Grey of Albany, who described it as "a fine ornamental nettle" (Urtica urens), a bad weed in Europe any how, as I have felt its malignity on some parts of my individual - - - - long before I studied cryptogamy. At the time I got it it proved to be one of the best "roots of all evils." This "root plant" suggested to me many more of the same quality but more weedy, "a variegated weed" would say our friend above. It is Ægopodium podagraria fol. var. (Gout-wort in English), a plant growing as freely everywhere as Quack?—Couch-grass (Triticum repens). It is eminently a root of all evils, but it produces both abundance of roots and some money, which to my knowledge "pays better" than coleus to-day and gives less trouble. But I think I have said enough, if not too much, so I shut the valve. And what next? I hardly know, for I have been led astray, wandering hither and thither, without I might say, having the consciousness of what I was about.

I have, when on the ground of the Brooklyn Hort. Society, forgotten a few incidents that probably I shall never have occasion to relate unless I do it now. That year 1854 was a remarkable, an eventful year. First was the advent or reviving of the Brooklyn Hort. Society, which society shined for seven years, except a very few cloudy days. It was also the *first* year we saw a travelling agent from an European horticultural establishment on this continent—at least to my knowledge. It was the year of the Crimean war, not a holy war, but the reverse. I say not holy perhaps because it somewhat hurt my purse— a sensitive thing with every body. It was the first year I began to import plants (direct) from Messrs. Low of the Clapton Nurseries, the founder of the establishment. His son, who died lately, was the same man who came hither in 1854, and who came to see me in Albany, with Mr. Edgar Sanders, now a resident of Chicago. This Mr. Low, when he saw me at 15 or 18 yards distant, hallooed to me: "Are you Mr. Menand?" "Yes" I answered, when he said again "Mr. Menand? the fellow who sold in Brooklyn last May an Ixora coccinea for 4 pounds—$20!" When he spoke these words we shook hands. "Well," he exclaimed, "you are a lucky fellow to sell a plant for $20! We would be glad to sell all our ixoras for that amount. I would like to see these 4 pound plants." We were within 3 or 4 yards of them; they were in a hot bed frame behind us. I opened the sashes and showed them to him. I had perhaps 6 or 8 dozens of different sizes. Then he turned round to me and said: "If our plants were as good as these we would not sell the stock for 4 pounds." I answered him that I believed him, and we continued to talk of something else—of giving him an order for some plants; this was the main object of his visit. Then we began to argue about the identity of an erica. He gave it a name different from the one I had. He said my name was incorrect. Then I told him "you have cheated me, for it came from your establishment." He said it did not. I said again, it did. I found afterward that he was right. But what makes me mention the circumstance is not the name, but the fact that that plant was *dead* and neither of us noticed it, and yet Mr. Low was a competent judge in that matter. When he and his friend left I went with them to Albany, always thinking of my plant (ericas were at that time my hobby) that it had a queer looking appearance, but could not realize that it was dead. As soon as I got home I went to see it, with a candle (it was night) but could not see any indications of its being dead, no more than 4 or 5 hours before. As soon as day-light came I went again. Then I did not need spectacles to see that it was gone—*ad patres*—gone to heaven—dead. Since that I have seen many such examples. I once sold one that I knew was dead, that the man had selected from among a few of the same kind. That man was a gardener. I sent him that plant, with another that was alive. He got them the same day I sent them and the day following he wrote me I had made a mistake; that he only wanted one. He soon found out he was mistaken, not I. Once I sold a Cereus senilis in the same circumstance and the party who got them told me the dead one was the better looking of the two. That man was our friend Mr. Wm. Grey. So this long spun story shows you that gardeners are not infallible.

Now that I am stuck in the ruts of prolixity let me continue a little longer about the events that took place in the year 1854. A few days after Mr. Low was gone, as I had promised him, I sent him an order, mostly ericas, and a few other plants, the whole not to exceed $70 or $75. In September or October I received a box containing the plants ordered, at least think so, but I guessed! When I had opened the box I found that the plants and the pots (they were in the soil) were in a powder, as if they had been ground by a millstone, so fine that one could have snuffed the whole like snuff. And strange to say I saved two plants, one Funkia grandiflora, that proved to be a Funkia alba, a plant I had in quantity; and one Genista prostrata, a British plant. One was worth 6 pence British and the other 1 shilling. That was all I had for $70 or $75 and $6 or $7 for freight. Was not that *coining*!! I wrote Messrs. Low and told them the condition of the plants and added: "If you feel as I do, when spring comes send me again the same lot and charge me half the price agreed." They did so and when the plants came I had about $6 or $8 worth alive. They gave me the particulars of the shipping in Liverpool. All available steamers had been chartered by the government to send ammunition, troops and all kinds of supplies to Sebastapol, and they found only a small steamer, already overloaded, that would take my box, and they were obliged to stow it near the engine room, which accounted for the "snuff" I got. And this explains to you my "purse hurt" by the Crimean war. Now will all this long rigmarole story or stories pay you for the candles you will burn in reading them? If you say yes, I shall be satisfied. But I was not satisfied in the transaction, although I did not give it up, for from that time I began to import from France, Belgium and England. I had awful bad luck, still I persisted. Some plants I imported *three times* before I could get one alive of Latania rubra, Phœnicophorium sechellarum, Pandanus reflexus. I think I spent $100 before I could get any alive. Pandanus reflexus was the worst, but when I had it I did well with it because I could propagate it, but the palms I could not. So when I sold them I had to ask a large price, which made some of my friends of the "element" say that I charged awful prices. It may have been so, but if to-day I had nothing to live upon but what I realized on those plants I could not have one meal a day. I could not very well tell how I made what money I have. On nothing in particular, but on many things. I always kept a little of everything in the line of horticulture, so I could supply almost anything wanted. During the secession war, it was the "Golden age!"

Labelling at Exhibitions.

At the last exhibition of the Horticultural Society of Chicago nearly every plant and vase of flowers in the hall was provided with a printed label like the one of which we give an illustration herewith.

The labels were of paper similar to that used in shipping tags and were provided with brass eyelets. The great majority of the labels were printed before the opening of the exhibition. Lists of the varieties of chrysanthemums that would most likely be shown were secured in advance from those whom it was known would probably be large exhibitors. These lists were combined together, duplicates crossed out, and then from 10 to 50 of each kind printed. Many were not used, but the expense was so light when gotten up in this way that the loss could well be afforded. The labels were printed in sheets, a dozen or more different kinds on the same sheet, and the labels cut from the sheet afterward, then eyeleted. The great superiority of a label printed in bold type over any sort of a written one is quite apparent. In addition to this a thousand plain labels were arranged for also, and an expert letterer was engaged for the day before the opening, and the opening day also, to letter labels that could not well be arranged for in advance. And it was found that this man paid for himself several times over by lettering exhibitor's placards for a moderate fee and in lettering the numerous placards needed around the exhibition hall, many of which are not thought of until needed.

The labels were suspended from the plants by stiff wires with a hook at the top, the wire stuck in through the same loop in the string used to tie shoots to a stake, or on longer wires stuck into the soil. The same wires were used for the cut flowers, being stuck into the vases among the flowers, a little to one side, so that the label set out a little way from the blooms.

Palms, orchids, begonias, and cut flowers of roses, carnations, etc., were all labelled too, and that this free labelling added a great deal to the interest in the exhibition on the part of the general public was plain to be seen. Before the exhibition was over people began to speak of varieties by name in conversation with one another, and specially interested ones, with note books in hand making memorandums of sorts that particularly pleased them, was a much more common sight than at previous exhibitions.

We are convinced that labelling in this way enhances the educational value of an exhibition at least 100 per cent.

Labelling at Exhibitions.

After the excellent and timely suggestions upon the advantages of having everything plainly and conspicuously labelled and the best manner of doing it, offered by the FLORIST before the fall exhibitions, I confidently expected to find all well managed societies falling into line, and to meet with no more serious trouble in this respect, but I found a much larger percentage of the chrysanthemums at a prominent eastern exhibition minus plain labels than in the same place the previous year. One of the principal inducements for me in visiting these shows is to learn what varieties of recent introduction are worth picking up and when I find no mark by which I can indicate such as specially please me I feel somewhat inclined to leave in disgust. Of course varieties which are entirely new and unnamed cannot be labelled in the usual way, but I see no reason why even these cannot be so marked as to be known when subsequently offered for sale. For instance, all the specially fine seedlings might be labelled with the name of the originator and a specific number (so arranged as not to be confounded with the number of the exhibit) with the understanding that the introducer should give these items along with the name given to them, when first offering them for sale. It would then be easy to recognize them.

WM. F. BASSETT.

Cleaning Brick Flues.

Instead of running a line through I take ½-inch gas pipe of lengths to suit, screw them together until I have the required length and find it O. K. BEN MOSS.

Mendota, Ill.

LABELLING AT EXHIBITIONS.

Boston.

The meeting of the Gardeners' and Florists' Club on Feb. 2 was well attended, there being about sixty members present. The gratifying announcement was made by the president that the committee appointed to procure a charter had performed that duty, and that the club is now duly incorporated under the laws of the state of Massachusetts.

The essay for the evening, by Prof. B. M. Watson of the Bussey Institution, on "Methods of Propagation," which is presented in full in another column of this paper, was listened to with much attention, and was followed by an interesting and at times animated discussion on the various points treated.

Jackson Dawson told of some interesting experiments which he had made, splitting up the seeds of sunflower, orange and other things before planting, and obtaining several perfect plants by this method from each one of the divided seeds. The discussion of seed splitting was brought to a humorous ending by a member in the back row, who gravely inquired of Mr. Dawson what number of divisions he could make from a gloxinia seed.

The old question of the comparative flowering merits of cuttings taken from blind or blooming wood on roses and other plants was introduced and brought out a very positive opinion from Prof. Watson that there could be no difference, and that he could see no reason why so-called blind wood should in any way affect the blooming power of the future plant, good wood and a healthy plant being, in his judgment, much more important, and the main thing to be sought.

Jackson Dawson said that he would go further, and claim that blind wood ought to give the best results, as it was apt to be short jointed and well ripened, whereas flowering shoots would have a tendency to be pithy and weak. He would select blind wood for cuttings every time in preference to flowering wood.

Mr. M. H. Morton, who inclines to the opposite view, claimed that his experience had been that he could get better plants from flowering shoots, but he had this side of the argument to himself, all the other participants, including Benj. Grey and Louis Guerineau, favoring Mr. Dawson's views.

A unanimous vote of thanks was tendered to the essayist.

On motion of Lawrence Cotter, whose bumps of sociability and conviviality are well developed, seconded by Sam Coleman, who alway coincides with Mr. Cotter's views on the necessities of the inner man and the wisdom of providing abundantly for the same, a committee was appointed to arrange for another club dinner to take place in March.

Three new names were added to the membership list.

The cut flower trade continues brisk, and when good stuff is offered it sells at sight. There are a few Jacqs, Brunners and other hybrids of varying quality coming in. Narcissus Von Sion and Single Trumpet are plenty and sell well. Harrisii lilies, callas and fine roses form the principal decorative stock in the store windows. There is an abundance of small stuff, such as myosotis, nasturtiums, coreopsis, Marguerites, etc., for variety. Tom Cox is bringing in some neat plants of erica, the first of the season. There is also a limited quantity of cut erica offered occasionally. Carnations continue to sell well, and still maintain the prices at which they have been quoted ever since the holidays. Violets as a rule are only fair in quality. There are a few of the single variety coming in, but they do not take in Boston.

At Horticultural Hall there is an attractive little display on the table every Saturday of camellias, azaleas, etc., from Jas. Comley, orchids from C. M. Atkinson, forced hardy shrubs from Charles Jackson Dawson, etc. The next regular exhibition of the society will be the spring show, which is scheduled for March 22-23-24-25. A special prize of $50 has been offered by Mr. F. B. Hayes for the best fifty trusses of rhododendron of not less than twenty-five varieties, to be competed for at the Rhododendron Show on the 6th of June.

The Shady Hill Nurseries, formerly conducted by F. L. Temple and recently by Temple & Beard, have come into the control of a corporation entitled the Shady Hill Nursery Co. E. L. Beard, President, and H. M. Pratt, Treasurer.

A. T. Cefrey is preparing to open a new flower store on the corner of Washington and Hanover Sts.

New York.

The city florists are all busy. The last week has been a phenomenal one as far as the number of dinners and social events is concerned and there are plenty more in prospect. The rose growers could have disposed of many more roses during the past two weeks and it would take a pretty big crop before any overstock would be apparent. Carnations share in the general prosperity and violets of course go at sight. There is some grand mignonette in the market which sells high, but there is considerable preference manifested for the old fashioned small flowered kind which makes up in many arrangements better than the mammoth kind. Tulips are very handsome and sell well, but at low prices.

From Mr. De Forest, Siebrecht & Wadley, Pitcher & Manda are coming in large quantities of beautiful cattleyas, which are used very extensively this year in first class work.

Siebrecht & Wadley's great orchid show will take place at the Eden Musee on March 2 and they hope to eclipse all of their former efforts in this direction.

At the meeting of the New York Florists' Club last Monday evening suitable resolutions upon the death of James Taplin were presented by Mr. J. N. May and were unanimously adopted by the club.

The question of securing a club room was brought up and after discussion Messrs. May, Dean, Asmus and Weathered were appointed a committee on ways and means, and requested to report plan and estimate of probable cost of such headquarters at the next meeting of the club.

The committee on Chrysanthemum Show reported that satisfactory arrangements had been made with the Madison Square Garden Co. and that the exhibition would open Nov. 1. It was also announced that the schedule of premiums would be ready in a few days. The premiums will be even larger than last year, and a grand show is already assured.

Mr. May's essay on "Employer and Employed," which appears in full elsewhere in this issue, was discussed by Messrs. Allen, O'Mara, Russell, Manda, Hillman, McDonald and others.

There was a good attendance at the Bowling Club in the afternoon.

Mr. Ernst Asmus is confined to the house by illness. All hope to see him around again at an early date.

Robert Burgess, an employe of the Klunder Co., is supposed to have been lost in the Hotel Royal fire.

Washington.

Freeman is fitting up and expects shortly to occupy a fine establishment on 13th street (No. 612) near F. It is very spacious and has an immense show window. The interior is in very good taste, with long, white marble counter. The rear end with its ample exit is supplied with roomy stands for plants and made cheery by sky-lights. The walls and fixtures are all in simple white and gold. Refrigerators, cold chambers and hot water heating arrangements are of the most approved kind.

Gude Brothers also remove this week to their new and admirably located storeroom, No. 1224 F street. Here too everything is fitted up in the very best style. The entire front is in glass and every convenience is provided which a modern first class florist's establishment calls for.

There are now within a few blocks of each other, almost on a line, the following florists' establishments: Strauss, Studer, Clarke, Dieterich, Gude Bros., Freeman, Fisher, Small, Hale and Miller.

The marked difference in the character of floral decorations here this season as compared with previous ones merits some notice and a review of the past month of what has been done may not only prove interesting, but also instructive. During a series of past winters the number of elaborate and expensive dinner, reception and ball decorations have been exceptional for a city of this size. Decorations involving an expense of from $500 to $1,000 were not at all infrequent, whereas this season, with the exception of what has been done at the White House, there have been only two notable affairs, but these were of such unique character that they cannot fail to interest your readers.

The cut flower trade and also foliage

decorations on the whole have been quite equal to the past, but while the orders have increased materially their extent is of a decidedly more limited character, one florist stating that his average orders rarely exceeded $15 to $20, whereas in previous years an order of from 50 to 100 corsage bouquets alone was not uncommon.

Of the two occasions referred to the first I shall mention is the reception and ball given at the legation by the Chinese minister and Madame Tsui, his wife. These periodical balls and receptions as a society event here are second only to the Diplomatic dinners given at the White House and the kind hearted minister is not a little taxed to accommodate all whom he generously invites. The floral decorations on this occasion were, to say the least, unique and of a distinctively Oriental character, so far as the material obtainable here would admit of making them. Secretary Ho and an assistant personally selected the requisite plants and flowers and then superintended their arrangement, the decorator, F. H. Kramer of Studer's establishment, simply carrying out the secretary's directions. On entering, at intervals along the wide hallway on either side, stood tall Seaforthia elegans, alternating with kentias and arecas, the corner cabinets being covered with Chinese primulas. In the reception room to the right there was an array of large palms, the mantels being banked with orchids, while the pictures and chandeliers were heavily draped with garlands of smilax, interspersed with Chinese Sacred Lilies (Joss flower). The large mirror was flanked by tall palms and banked in front with orchids and ferns. But the distinguishing feature of the decorations in this room consisted of sixteen Chinese vases and jars, ranging from two to five feet in height, which held peculiar cone shaped bouquets twenty inches and less across the base and some twenty-five to thirty inches in length, made up of Chinese Sacred Lilies, orchids, American Beauty roses and ferns wired to long stalks made to fit into the vases or jars.

In the ball room the some general idea prevailed, huge pyramids of palms occupying the center, in the midst of which the orchestra was placed, completely hidden from view. Here too the chandeliers and windows were draped with smilax interspersed with orchids. All the other rooms contained vases with bouquets similar to those in the reception room. Finally the table in the dining room had three low pyramids of American Beauty roses, alternating with tulips, narcissus and orchids arranged along the center, the largest being 36 inches long, 18 inches wide and 8 inches high. Here too the mantels and fire places were banked with ferns and Cocos Weddelliana, while orchid boutonieres were supplied to all who wished them.

We have thus had given us an idea of floral decorations in the "flowery kingdom."

A very different idea prevails, however, with the people of this western hemisphere and this was well illustrated by the Bonaparte or so-called Franco-American ball, given at the Arlington last month in honor of the debut of Miss Bonaparte, the daughter of Col. and Madame Jerome Bonaparte of this city. It is generally conceded that the floral decorations on this occasion in point of artistic design and elaborate detail have never been excelled at the National Capital. I will not detain you in the reception room, although elaborately decorated with foliage plants and immense vases of loosely arranged long stemmed roses whose perfume pervaded the whole apartment, but go right on to the ball room, rich in its simplicity of white and gold and its many mirrors reflecting a hundred fold the beauty gathered there. All around the walls above the windows ran a frieze of palm leaves artistically arranged with occasional festoons of Asparagus plumosa. The orchestra balcony at the west end was completely hidden in foliage, beneath which on a low dais of green stood a white and gold wicker high heeled slipper nine feet long, but of perfect proportions, imported from France especially for this purpose, as were also several hundred tiny wicker slippers with handles, six or eight inches in length, containing favors made up of violets, lilies of the valley, carnations and rose buds. In addition there were many other and varied favors, but these floral favors were so artistically arranged in and all over the huge mother slipper that it gave a most charming tone and effect to the whole mass of gifts the generous host and hostess had provided.

But this gives only a faint idea of what the decorators (Smalls) achieved on this occasion. Innumerable electric lights imparted a fairy like effect to the foliage grouping in every niche and corner of this immense suite of rooms intensifying colors and greatly enhancing the contrast of light and shade.

Before closing, however, let me say a word about the decoration of the supper room, where on this occasion a departure from the usual practice of having a long or continuous table was made. Thirty tables, seating each four persons, were decked with the finest of linen, china and rarest of flowers, and every table had its distinctive color and character. The one was made up principally of Ulrich Brunner roses, another of white La France, another of Beauty, of Watteville, Brides, etc. The walls, mirrors, windows and chandeliers were delicately garlanded with Asparagus plumosa and smilax. Verily, Flora reigned queen on the evening of the Bonaparte reception and ball. Z.

Philadelphia.

The regular monthly meeting of the Florist Club was held in the library room of Horticultural Hall, Tuesday evening, Feb. 2. There was quite a large attendance, some sixty members being present.

This is the first time the room has been occupied since the alterations were completed and the bright, cheerful appearance, in such contrast to the old surroundings, was very favorably commented upon.

In the centre is a large table covered with the best periodicals relating to the business and the growth of flowers. Some of these have been donated by the publishers, while others were provided for out of a fund in the hands of the Library Committee. Among them we note the following: *Gardeners' Chronicle, Gardeners' Magazine, Gardening World, Garden and Forest, American Gardening, American Agriculturist, American Florist, American Cultivator, Farm Journal, Florists' Exchange, New England Homestead, Rural New Yorker, Farm and Home, Farm and Vineyard, Farm and Fireside, Success With Flowers, Harper's Monthly, Scribner's* and *Century*. This should do for a beginning.

Quite an interesting discussion took place as to how much florist there should be in a man to make him eligible to become a member of the club. It has been decided for some time that a dealer in florists' supplies is so identified with the business that he can be proposed for membership, but when the rubber hose man, the paper box maker, the rope and twine dealer are knocking at the door, it was thought time to draw the line, and hence the discussion. The whole matter was finally referred to a committee.

George Rauch, Ridding G. Palmer, W. F. Zibell, John Crawford and John Andre were elected to membership.

A large photograph was received from the St. Louis Florists' Club of their chrysanthemum show last fall.

At the next meeting of the club Mr. Charles C. Price will read an essay on "How to Grow Hybrid Roses."

Mr. Herr's paper on "The Advantage of a Florist Growing Specialties" was well received. Quite an animated discussion took place as to what disposition should be made of it. After some unusual flights of oratory, it alighted in the hands of Secretary Michell, who will see to its publication.

Mr. Grigg was present and addressed the club on the subject of the proposed wholesale Florists' Exchange, in order to get the views of the members, answer objections and enlist new friends in its favor. There was not much discussion, but all who spoke appeared to look favorably on the project, and seemed to think that, if started right, it had a fair chance of being successful.

Trade the past week has been fair, and we hear very few complaints. All the good stuff is sold out clean every morning at good prices. Beauties are fair and sell for 35; good hybrids very scarce, the best bring 60, and from that down to 35 for medium sized flowers; Mermets are now very fine and with Cusins are the most popular and best selling roses of their class, bringing from 8 to 10; the smaller roses sell for 5 and 6; carnations still bring 2 to 2½, and seem to be getting scarcer; this flower is growing steadily in popularity; tulips are 5; valley 4 to 5; freesia 1 to 1½; daffodils are now to be had in quantity at 6.

George Anderson has a fine house of Brunners and Laings which will be in next week. His Brunners look particularly fine, and are much better set with buds than the Laings.

Messrs. Evans & Battles (C. F. Evans and H. H. Battles) have dissolved partnership, Mr. Battles succeeding to the business at 108 North 12th St. Mr. Evans and his brother Frank will take charge of the Rowlandville Nurseries at Frankford, Mr. Geo. C. Evans giving up the business to his two sons. In view of the experience Mr. C. F. Evans has had as a retailer, it is expected that his roses will have just the color and length of stem required.

John Burton is now cutting some good Laings and Brunners, but finds it hard to fill orders, as the demand far exceeds the supply.

Mr. J. William Colflesh has erected two new houses, just to keep the material and sash he had laying around from going to waste, is his excuse.

The club alleys have been well patronized the past week, and the interest in the contests of the three classes is increasing. Brown has made a new record, his average for January being 162 pins to a game in 54 games rolled. In the first class McLean now leads, his score in the last contest being 542 for 3 games. Longinette is a good second. Campbell leads in the second class, and Wm. Craig in the third.

Robert Craig is better, and with Mrs. Craig, is spending a few days with Mr. May at Summit.

South Lancaster, Mass.

The beautifying of Mr. Eugene Thayer's summer residence is fast progressing under the skillful direction of Mr. E. O. Orpet. At this time of the year the principal outdoor beauty is in the charming landscape as seen from this elevated location and the noble evergreens bending under their load of snow. But within the greenhouses there is much to see and admire. The dendrobiums, both nobile and Wardianum, are in grand condition. The Cattleya Mossiæ are showing flower sheaths in abundance and will be very handsome. In one house is a bench of May's Mignonette, in another a display of Sutton's cyclamens and a collection of Farquhar's cinerarias, all of which are creditable to their grower, as well as to the seedsmen whose names they bear.

Under the center bench in one house is a luscious bed of mushrooms, giving a valuable crop in a place which is usually permitted to be waste ground. Among the specimen plants are splendid pieces of Platycerium grande and Nepenthes Mastersiana and from the roof the brilliant flowered Tacsonia Van Volxemii hangs in graceful streamers. There are six houses in all, heated by hot water under pressure.

A short distance away is the beautiful estate of Mr. John E. Thayer, also recently laid out. Jos. Clark, Jr., is the gardener. The driveway is a feature in itself. On one side is a hedge of Salix aurea, the golden branches forming a charming picture in the winter sunlight. On the other side is a grand row of young Picea pungens, said to have cost $5,000. This is flanked by great masses of Rosa multiflora Japonica. In the houses are fine plants of Cypripedium Boxalli and villosum in flower and some noble specimen ericas loaded with bloom. The cyclamens and primroses here are also good.

At Mrs. C. V. R. Thayer's are some specimen variegated agaves that would make John Thorpe's heart rejoice and would go a long way towards filling up that show house at the Columbian Exposition. The houses are in charge of Mr. Fletcher, who with his right hand man, Mr. Michie, appears to be thoroughly enjoying his winter vacation.

South Lancaster boasts of one commercial florist, Mr. G. F. Chandler, who has grown up with the town, whom everybody likes, who carries his three score years lightly and insists that he has but just arrived at the years of discretion. Commercial gardeners don't have winter vacations, but Mr. Chandler is in the fashion in one respect, that is with cyclamens and primroses and he grows them just as well as some of his neighbors.

Buffalo.

Good seasonable winter weather and a number of receptions, teas, "four o'clocks," etc., has greatly improved business these past two weeks and the future is bright for a continuance of the same. There has been no surplus of flowers lately of any kind. Tulips, daffodils and hyacinths, which seemed to lag a little a few weeks ago, now meet with a ready sale.

From what we glean from notes from other and larger cities Buffalo is I think a little to the front in producing good tulips. Since the first week in January the highest quality tulips have been grown here with stems 10 to 15 inches long, but there is only about three varieties worth growing for early use, viz., a good yellow (Chrysolora or Yellow Prince), La Reine and Vermillion Brilliant.

Scott has been using orchids in mantel decorations on several occasions of late, much to the satisfaction of his patrons. What can be prettier than a number of Dendrobium Wardianum gracefully nodding from among a bank of Adiantum cuneatum or Farleyense!

Mr. T. Mansfield of Lockport was in town last week. He reports business among the florists of the "City of Locks" as being good all around and no flowers going to waste. Miss Nellie Lewis of Lockport, daughter of the veteran florist, and for whom the pink carnation was named, was married last week.

Each year of late there is in Buffalo an increase in sale of flowering plants; azaleas, cyclamens, primroses, cinerarias, in fact any showy plant in its season, meet with a ready sale.

Mr. William Belsey of 18th street is our best cyclamen grower. He appears to have brought this faculty with him as well as many other good qualities from old England. Mr. Belsey prefers C. persicum grandiflorum, says it makes a more compact and free blooming plant than the giganteum variety. Another plant found in abundance at Mr. Belsey's is the true old English primrose (P. vulgaris). This can scarcely be called a showy plant, but its delicate odor and old associations are appreciated by many.

We are all ready for the "carnationists" and hope a good crowd will attend. A bit of healthy advice to them is, don't forget your rubbers. G. S.

Chicago.

Frederick Sulzer, one of Chicago's oldest and best known florists, died suddenly last Saturday evening at his home in Ravenswood, of typhoid-pneumonia complicated with brain trouble, aged 56 years.

The announcement of his death was a great shock to his many friends, for only a few days before he appeared strong and hearty and about the last one to be called from life.

Mr. Sulzer's father came to Chicago in the thirties, and purchased from the government the land upon which a part of Ravenswood is now located. Frederick learned the nursery business with Messrs. Ellwanger & Barry of Rochester, and after serving his apprenticeship established a nursery upon his father's land. Later greenhouses were added, and he was engaged in the business till a few years ago, when he retired to enjoy a competence acquired through the great appreciation in value of his real estate holdings.

He was a very liberal man, of kindly social nature, and had the confidence and respect of all with whom he came in contact. He held many official positions in Ravenswood, and his name was closely associated with every improvement made in that pretty suburb.

He leaves a wife and five children, all abundantly provided for. The funeral was held Tuesday under the auspices of the Masonic fraternity.

Mr. Charles Reissig is a very sick man, and the worst is feared.

Devine's Boiler Works has been removed from South Canal St. to 56th and Wallace Sts., and an office established at 189 State St. The moving was an enormous job, and Mr. Blish says that of the dirt that came to light he recognized some that he had been on familiar terms with before the fire.

There has never been a season when the supply in this market was so evenly balanced with the demand as the present one. There is no overstock of any particular variety, neither is there any decided shortage. In roses there is nothing to boast of, the quality being only fair. Beauties continue quite scarce and what few there are in the market are rather poor. There are no hybrids whatever at present. A few Wabans are coming in and though good in color are very small in size. Carnations are still fine and abundant, and all find a market. The cut of violets has doubled in the last two weeks, but the demand has kept equal pace.

The bulb stuff is vastly improved. Tulips are beginning to show up in good form. In yellow we have Chrysolora and Yellow Prince. The latter in particular is exceptionally well grown by J. T. Anthony. These flowers average twelve inches of clear stem with fine healthy foliage. Kaiserkroon also shows up well, although not as long in stem as yet. Daffodils are fine, particularly Von Sion. Lily of the valley is in good supply and is of very good quality.

C. E. Hampton, who has conducted a floral store on Wabash avenue for the past six months, died last Sunday.

George Collinson, an old timer in the trade, died Monday, the 8th.

Hartford, Conn.

The annual meeting of the Hartford County Horticultural Society was held Jan. 20. The retiring secretary, Edwin A. Taylor, reported a very prosperous year. The treasurer's report showed $1,430.13 on hand. Officers for the coming year were elected as follows: Pres., John W. Crane; Vice-Pres'ts, Wm. B. May, John Coombs and B. E. Beemer; Sec'y, C. H. Pember; Treas., Geo. W. Hubbard; Executive Committee, John C. Webster, E. B. Smead, John W. Crane, J. H. Bairdain; Committee on Awards and Premiums, J. W. Crane, P. A. Sears, John O'Neil, S. J. Kirk.

The first annual meeting of the Connecticut Pomological Society was held at Hartford on Jan. 26 and 27. There were many interesting essays delivered and the meetings were generally attended by the florists of the state.

An exhibition of fruits and flowers is talked of.

Florists Sidney North and C. C. Munsell have recovered from their recent illness.

Mr. A. R. Lomel, manager of the floral department of Brown, Thompson & Co., is in New York buying a supply of plants for spring trade.

Trade at the present time in Hartford is very brisk. Violets and carnations have been quite scarce owing to the dark days of late. R. J. CAMP.

St. Louis.

Notwithstanding the rainy weather business during the past week has averaged good. Prices in general steady, with an increased demand for set work.

Messrs. Michel are sending out a fine colored plate of the Mexican Morning Glory, Ipomæa palmata.

Our city park commissioner predicts a glorious future for the St. Louis parks. He says that four years will see a remarkable improvement in their floral attractions. J. W. D.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

PINK SPORT FROM BEGONIA RUBRA.—Mr. O. R. Demmler, Eau Claire, Wis., sends us flowers and foliage of a pink flowered sport from Begonia rubra. They are identical in every way with those of B. rubra, except in the color of the flowers, which is a pleasing shade of pink.

"THE CROWN OF THORNS" PLANT.—Honor to whom honor is due. Neither the *Rural New Yorker* nor any other newspaper or person openly raised one breath of objection to this fraud till after it had been thoroughly investigated and openly exposed and vigorously denounced by the chairman of the Nomenclature Committee before the Society of American Florists.

THE Michigan State Commission of the World's Fair has appointed five florists, in widely separated parts of the state, a committee on floriculture for the state, but seems to have provided no way for the committee to meet except at their own expense. Certainly if the committee is to do anything they must meet and as they give their time and services free it is decidedly unjust to expect them to pay travelling and hotel expenses into the bargain.

Catalogues Received.

E. D. Sturtevant, Bordentown, N. J., aquatic plants; Johnson & Stokes, Philadelphia, seeds; John R. Box, Croydon, England, begonias, etc.; Alfred Bridgman, New York, seeds; Thomas S. Ware, Tottenham, London, Eng., seeds; same, dahlias; same, begonias; same, chrysanthemums; H. Cannell & Sons, Swanley, England, seeds; W. W. Hilborn, Leamington, Ont.; small fruits and plants; DeCou & Co., St. Paul, Minn., seeds; P. H. Foster, Babylon, N. Y., nursery stock; Stark Bros., Louisiana, Mo., nursery stock; Ludwig & Richter, Allegheny, Pa., seeds; M. F. Ludwig & Son, Allegheny, Pa., plants; W. B. Cole, Painesville, O., nursery stock; John Gardiner & Co., Philadelphia, seeds and bulbs.

EAST DOWNINGTOWN, Pa.—James F. Reid is building a new house 54x18.

DELTA, COLO.—H. A. Parcells, formerly of Glenwood Springs, has removed to this place and is rebuilding here.

AUBURN, ME.—The dwelling house of Florist Geo. M. Roak was badly damaged by fire on Feb. 1. Insured.

COSHOCTON, O.—Martin J. Schott has about completed a greenhouse 62x20 feet with potting and boiler house attached, all built in a substantial manner, to be heated by hot water under pressure.

VICTORIA, B. C.—J. T. Higgins is moving to Cadborough Bay road, where he has nearly completed the erection of about 5,000 feet of glass. The attempt to form a trade organization has not yet borne fruit. A preliminary meeting was held, also two adjourned meetings, but a permanent organization has not yet been effected.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTELDES, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

Self Blanching Celery.

We have a great deal of troublesome correspondence regarding Golden Self Blanching Celery, arising from the fact that it is not properly understood either by the seed trade or the celery grower.

It is a hybrid and seems to vary considerably in different seasons, on different lands and locations, but it is well known that there is a certain proportion of green plants in it—always was and probably always will be. The fewer green plants there are the more preferable it is, but if the green is entirely selected out and only the golden allowed to seed the constitution of the plant is very much impaired and the result is a very fine small delicate plant, but not enough of it and of a very poor keeping quality. The great reason why there is so much fault found with it on account of "too much green in it" is caused in this way: When the seed is sown in the seed bed the green has the largest seed with much the most vitality, grows first and strongest, making a much better looking plant than the golden does. When transplanting time comes it is quite natural to select out the strongest and best plants, plant them and destroy the weak ones; the result of this is, in those strong plants you get ten times the proportion of green that you would if *all* the plants were transplanted and the small weak plants that are destroyed are nearly *all* golden, hence the cry "too much green in it." AN OLD SEED GROWER.

Trade Looking Up.

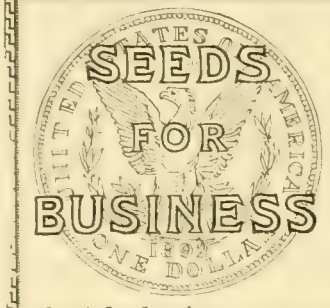
"Cum Grano Salis."



I do not dispute the opinion of Brother Blanc, the "Eminent Horticulturist," in regard to the keeping qualities of the "Picture Rock Tomato," but I think tomatoes are always improved "with a grain of salt." Don't you? A. BLANC,
Horticultural Engraver.

Red Ants.

Can some reader of the FLORIST give me a sure plan for killing red ants (the large kind)? I have them in the conservatory and cannot get rid of them, although I have tried everything I know of.
F. G.

POTASH SALT.—Will some reader of the FLORIST tell me where I can buy the potash salt which is used in fertilizers?
E. B.

WHEN you write an advertiser tell him that you saw his advertisement in the AMERICAN FLORIST.

THERE are all sorts of seeds. Some are good to look at; some to sell; some to experiment with, and see what the fruit will be like—if they grow. Our seeds are for **BUSINESS.** They are seeds to raise money. You don't "try them,"—we have tried them. We sell what it **PAYS** to plant.

Don't you need a list of such seeds? Our "**Money Grower's Manual**" is solid meat,—all doubtful kinds left out. If you plant for business, you must have it. FREE, if you send two 2c. stamps for postage, and mention **The American Florist.**

JOHNSON & STOKES, 217 and 219 MARKET ST. PHILADELPHIA, PA.

WE TELL THE **TRUTH** about Seeds. We will send you Free our Seed Annual for 1892, which tells THE WHOLE **TRUTH.** We illustrate and give prices in this Catalogue, which is handsomer than ever. It tells NOTHING BUT THE **TRUTH.**

Write for it to-day. (P. O. Box 1086)

WHY You Should Grow Mushrooms.
Because they are the most profitable crop for the outlay that can be grown and may be grown without interfering with other crops. The market is sure, the supply never having been equal to demand.

WHEN You Should Grow Mushrooms.
During the Winter and Spring months, the first planting in August or September with successional planting until April.

WHERE You Should Grow Mushrooms.
Under the greenhouse benches, on the greenhouse benches among growing crops, in Rose Houses, in frames in the greenhouse, in cellars, stables or outhouses, in the open field or in mushroom houses.

HOW You Should Grow Mushrooms.

First get spawn that will grow. It must be fresh, well spawned, and in good condition. **Gardiner's Celebrated English Mushroom Spawn** is the best, and is always fresh and reliable. The details of culture are given concisely in our treatise, **"Mushrooms for the Million,"** Mailed free. **Falconer's "Mushrooms and How to Grow Them."** Published at $1.50. (Gardiner's price $1 35 post free.) **Robinson's "Mushroom Culture,"** 50 cts. postpaid.

GARDINER'S ENGLISH MUSHROOM SPAWN.

John Gardiner & Co., have made a specialty of choice spawn for years, and their celebrated English brand (made by the best maker in England, specially for their trade), has gained an enviable reputation among critical growers for its uniform good quality, and can be thoroughly relied on to produce a good crop of the best mushrooms. Orders booked now for delivery as wanted, $8.00 per 100 lbs. Special rates to large growers. Address all correspondence to **21 North Thirteenth Street,** Philadelphia, Pa.

A FEW POINTS ABOUT OUR NEW DIRECTORY.

POINT 1.—The new book will contain an accurate list of those in the trade on the Continent of North America, January 1, 1892.

POINT 2.—In addition to the above it will contain the statistics of the Florist, Nursery and Seed Trades from the last census.

POINT 3.—It will also contain a complete list of all National and Local Trade Organizations, with just the information about each that you want to have convenient for reference.

POINT 4.—It will contain an alphabetical list of Roses, up to date, and whose accuracy as to spelling of names, class, date of introduction, etc., you can depend upon.

POINT 5.—It will contain a similar list of Chrysanthemums, also up to date. One that can be relied upon as authoritative.

POINT 6.—It will contain a similar list of Carnations.

PRICE ONLY $2.00.

? Can you afford to be without this book? We don't believe you can.

AMERICAN FLORIST CO.,
54 La Salle Street, CHICAGO.

North Easton, Mass.

The orchids at Mr. E. W. Gilmore's are in splendid condition. The cypripediums are a feature just now. There is a grand collection of C. insigne, many being rare forms. One specially fine one, entirely distinct from any yet named, is Mr. Gilmore's special pride. The flowers are very large and the markings unique. There is also a very rare variety of Cypripedium Lecanum superbum. The odontoglossums are showing excellent spikes for next month's blooming. Cattleya citrina is always in good form here, and is specially healthy this year, showing buds in profusion. The cinerarias are very fine, and the cyclamens here are the best in the vicinity of Boston, a grand lot of specimen plants, and Mr. Greaves has good cause to be proud of his success.

The Violet Disease.

I find the only sure remedy for the violet disease to be air-slaked lime. A number of people whom I have told to use it report most beneficial results. I even go so far as to pour strong lime water on the plants, even when buds are formed.

Baltimore. L. R. WOOLEN.

Bedding Geraniums.

Which is the best red flowered dwarf, and which the best half-dwarf, geranium for bedding purposes?

Also which is the brightest and best achyranthes? L. BONNOTT.

Flemington, N. J.

CARNATION DELICATA.—Mr. O. R. Demmler, Eau Claire, Wis., sends us specimen flowers of a seedling which he has named as above. It is white, lightly penciled with dark pink, petals fringed. Though rather small and not very full it is a very pretty flower. Mr. Demmler says it never bursts its calyx, and the flowers meet with very ready sale to his customers.

WASHINGTON, D. C.—Recently a novelty in these parts formed part of the floral offerings at the funeral of one of our letter carriers. His associates had a tablet made of white carnations in the shape of an envelope some thirty or more inches long. On this was the deceased's name and address in small purple lettering and in the upper left hand corner, well executed in tiny immortelles, a U. S. two cent postage stamp, the head of Washington being in white, and the ground work in bordered carmine; the work of C. F. Hale.

Association Flora, Boskoop, Holland.

Mention American Florist.

New Double White Daisy Snow Crest.

—)o(—

A most distinct variety and an improvement on all existing sorts. Its habit of growth and size of flowers, in comparison with older varieties, is gigantic. The flowers, which are borne on stout, stiff stems from 6 to 10 inches long, are of the purest white and full to the center. When fully developed they rise to a conical or sugar-loaf form, and well grown specimens will cover a silver dollar.

It makes an admirable hardy garden plant or may be forced for cut flowers under the same treatment as violets. $2 per doz.; $15 per 100.

Dreer's Quarterly Wholesale List now ready; mailed free to the trade on receipt of business card.

Delivering Plants in Cold Weather.

Mr. J. T. Anthony, Chicago, who does a good deal of plant decorating, has a wagon fitted up in such shape that he can deliver plants in almost any sort of weather.

The box of the wagon is eight feet long by three feet eight inches wide and supplied with a wooden cover five feet high. A heavy curtain divides the driver's seat from the rest of the interior and the back is closed with a wooden shutter, but there is a curtain inside the shutter. The object of the curtain is to always keep the interior partially enclosed even when the shutter is open. When a plant is taken out it is drawn out from under the curtain, which immediately falls back into place.

In very cold weather all the inside surfaces of the cover are hung with carpeting provided for the purpose, which is suspended from hooks placed along the top of each side. The curtains at front and rear are also hung with the carpet. This is to prevent any part of the plants from coming into direct contact with the cold wagon cover. The bottom of the wagon is also covered. Before the plants are loaded the wagon is first well warmed by jugs of hot water placed therein and fresh jugs of the same are used to keep up the heat afterward. With two 3-gallon jugs of hot water in the wagon he can safely transport decorative plants any ordinary distance in usual winter weather and with six jugs of this size he can safely take out plants in the coldest winter days we have.

J. H.—We have received a note from the National Metal Edge Box Co., 623 Cherry street, Philadelphia, saying they can supply your wants.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser in these columns.

(New hardy day blooming Moon Flower)

Large roots, per mail, 50 cents per dozen; per express, $3.25 per hundred.

C. M. RASOR, Greenville, Ohio.

Lathyrus Splendens.

I have noticed that many seed firms in the east offer in their catalogues seed of "Lathyrus splendens," though I dare say that none of them have ever seen a plant of it in bloom; but had they, I believe they would appreciate this magnificent novelty.

During the summer of 1889 I obtained the seed of a plant in its native place, not knowing at the time what it was. I sowed the seed the winter following, and by the spring of 1891 I had a plant ten feet high, and during its blooming period it was a sight not easily forgotten. The large racemes, each bearing from seven to eleven flowers of marvelous beauty, thickly covered the plant.

The flowers in a bud state are of a white and rose color mixed, but when expanded the color is true throughout, being nearly the color of a Reine Marie Henrietta rose and nearly the size of a sweet pea. As the flowers get old the color changes to deep claret, with a beautiful satiny surface like that seen in some dark crimson roses, and finally to almost a purple, when the flowers drop off.

The plant is truly perennial, growing in size each year, and besides it has the quality of standing heavy frosts with impunity. My own plant is now fifteen feet high, about to bloom, and to all appearances more profusely than last year.

Los Angeles, Cal. F. H. H.

Insects and Root Knot.

Can any reader of the FLORIST tell me how to get rid of a small white insect, not quite so large as an aphis, that lives in the bench material and underneath the plank walks, and that enters the pots through the drainage holes and seems to live on the roots of the plants? When disturbed it moves very rapidly. The house infested is filled with ferns, palms, crotons and begonias.

Also, would like information how to prevent and cure the root knot disease that attacks Rex and other begonias. This is very prevalent in the south. The plants will grow on till June and then die, after looking sickly for some time.

Biloxi, Miss. W. KEHLOR.

The Milwaukee Root Puller.

We desire to call your attention to the fact that we are now prepared to furnish a practical implement for eradicating Thistles, Dandelions and other obnoxious roots and weeds, and at a price so reasonable as to be within the reach of all.

The ease with which this Puller can be operated is what commends it to every person in want of anything of this kind, as a child of ten years can operate it successfully. In fact, with this machine, there is positively no need of having any thistles, dandelions or other obnoxious roots and weeds disfiguring our pretty lawns with their unsightliness, as it takes out the root, thus destroying it.

The person using it need not get down on the grass, but standing upright has only to press his foot on the step and force the jaws into the ground until the step rests upon the surface and then force the handle over to an angle of 45° and pull the jaws out with the root clamped between them. The cuts explain themselves. Will be glad to have you give this device a trial.
